The display in this department does great credit to the enterprise and proficiency of the two exhibitors, who represent this branch of our manufactures in the Exhibition. The variety, quality and style of work shown, would not be surpassed in any city. After a careful examination of the different articles, we have arrived at the following decisions:—

JAMES LONGMORE, S. F., has a beautiful Sole Leather Trunk and Valise, both of which are made in the very best manner and elaborately ornamented (the locks, riveted buckles, clamps and loops silver plated). He should receive the first Premium.

MESSRS. STEELE & Co., S. F., have a very fine Sole Leather Trunk and Valise, exceedingly well made and nearly equal to the first named. This firm also exhibit a splendid Ladies' Saratoga Trunk, complete in all its provisions. This Trunk and the superior Traveling Bags they exhibit entitle them to a Premium.

HOME FINANCES.

We have little to note in financial circles worthy of especial comment. The excitement of the past few days pending the election has had the effect to restrict operations, and no little dullness has prevailed. Some little activity among borrowers is observed to-day in adjusting the usual settlements on steamer-day, but apart from these requirements, there has been, throughout the week, a trifling demand for money. Bankers rates still rule at 1½ per cent. per month, but in the absence of legitimate inquiry and in view of the plethora of capital now seeking investment it is not likely that this figure can be long maintained. Capitalists seem disposed to loan with more freedom upon good mining stock collaterals, and at a fair margin from current market value, money can be readily obtained upon this description of security at about 1½ per cent. per month. Loans predicated upon first class city real estate have been negociated at 1½ per cent, and even lower rates are reported.

Some funds have been sent hither recently from the East for loan purposes and also for investment, and a large accession of means from abroad is looked for, the ensuing fall.

Receipts of treasure from the interior, since Saturday last, amount to $1,100,000; about three-fourths of this sum came from the northern mines and from Nevada. Bullion is in full supply for the steamer, and gold bars are selling at 840@845, silver rauges at ½ per cent. to 2 per cent. premium. Currency Bills on the Atlantic are selling at 120@125 per cent. premium on gold. Telegraphic transfers at 5@5½ per cent. premium, and drafts payable in coin at 3@3½ per cent. premium. Bankers Sterling may be quoted at 483½@483¾.

Legal Tender Notes are in good demand at 46@46½ cents. Some $70,000 were sold at the Board of Brokers this week at from 42½ to 45 cents.

LAUNCH OF THE CAMANCHE.—Everything is in readiness for the launch of this iron-clad on Monday next. Preparations for the accomodation of thousands of spectators expected to be present have been made. To-morrow morning—Sunday—the Rev. B. J. Lowe will preach a sermon from the deck of the steamer.

THE amount of tobacco planted in Connecticut this season is larger than ever before, and the yield is unprecedented. Hundreds of farmers have this year for the first time planted tobacco, and where the plants were set out before the rains which followed the long spell of dry weather, the crop is very heavy. The whole Connecticut river valley teems with richly laden fields of tobacco.

In one of a lot of old army canteens purchased by a hardware speculator in Memphis, a roll of $2,000 in greenbacks was found.

EASTERN FINANCES.

We are in the receipt of commercial and financial advices from the East, to the 13th of October. The same monotony, to which we alluded in our last, still prevailed at that date in trade and commerce, and there were no indications of an immediate improvement. The signs of the times pointed to continued inactivity, at least until the excitement incident to the Presidential canvass shall have passed off. The movements and counter-movements of political parties seemed to be absorbing quite as much attention as military operations in the field. Gold had been fluctuating between 195 @205 the second week of October, and most holders of merchandise, especially of foreign products, were inclined to meet the views of buyers. Large stocks of Western produce had been sold at auction in New York for the most they would bring, in consequence of the panic at Chicago, which had acted as a salutary warning to both bankers and dealers in breadstuff. Western banks had been drawing heavily upon the East in order to strengthen themselves against future contingencies.

Rates for commercial paper were ranging at from 12 to 15 per cent. per annum for first class names, and much higher for ordinary. A number of failures had occurred at New York, and most firms with foreign connections were looked upon with distrust. Affairs abroad, especially in England, were supposed to be in a critical condition, and at the date of our latest advices—October 3d—a severe panic was looked for. A large number of bankers, merchants and others, had been compelled to succumb to the crisis, and more failures were anticipated. Throughout France and other portions of Europe there were symptoms of pressure in commercial circles, and rates of discount for money were advancing.

CARMEN ISLAND ORE.—Messrs. Downer & Swain, of this city, have placed upon our table several fine specimens of grey copper and silver ore from a mine on Carmen Island, accompanied by a certificate from J. T. McDongal to the effect that he has smelted two lots of ore (from the same mine) by his patent process, one of which, consisting of one pound of ore, yielded a brick, which—assayed by Riehn, Hemme & Co.,—yielded at the rate of 32 per cent of copper, to the ton of 2000 pounds of ore, and silver to the amount of $420. The other lot consisted of ten pounds of ore and yielded at the rate of 45 per cent in copper and $100 in silver to the ton of 2000 lbs. The mine from which these specimens were taken is well defined, and about four feet thick. The company has about 50 tons of ore on the surface, which will soon be forwarded to this city. Several tons are expected up on the next steamer. The mine is located within three quarters of a mile of ship landing, which adds greatly to its value. Ships for the Eastern States or Europe may anchor or load at this landing.

This island is about 20 miles long by about three in width, located in the lower portion of the Gulf of California, nearly opposite the port of La Paz, and distant only about seven miles from the main land. Recent explorations have fully settled the question, as to the permanency of the mines, and no doubt can now be raised as to its value and importance as a mining district. Quite a number of promising mines have already been opened. Several of which are about as well developed as those upon the adjoining main-land, and are undoubtedly a continuation of them. There are already about a dozen mines being worked to a greater or less extent on the Island, some of which are developed to a depth of nearly one hundred feet.

FLOY FAVORITE'S correspondence from the new State of Nevada, in to-day's issue, will be found of lively interest. We desire to receive regular communications from her gifted and experienced pen.

OUR exchanges have been so taken up with the political excitement of the past week that they have failed to furnish us with the usual mining items for to-day's issue.

LOOK OUT FOR "FALLING STARS."—Professor Silliman has communicated the following which we publish as a matter of general interest. Many will doubtless act upon the suggestion :—

VIRGINIA, Nov. 10.—Astronomers anticipate a recurrance this year of the November meteoric shower of 1833; the mornings from the 11th to the 15th are all likely to show an unusual number of meteors, specially the 12th and the 14th. The best time of observation is from half past one o'clock, A. M., onward. The radient point is in the Constellation Leo. Observers in California, Nevada, and the Pacific Coast, generally, are requested to report their observations to Professor Silliman Jr., San Francisco, for the *American Journal of Science*, where they will be published for the good of science. B. SILLIMAN, JR.

EFFECT OF MARRIAGE.—Doubtless you have remarked with satisfaction how the little oddities of men who marry rather late in life are pruned away speedily after marriage. You have found a man who used to be shabbily and carelessly dressed, with a glaring yellow silk pocket-handkerchief, and a huge shirt-collar frayed at the edges, broken of these things, and become a pattern of neatness. You have seen a man whose hair and whiskers were ridiculously cut, speedily become like other human beings. You have seen a clergyman who wore a long beard in a little while appear without one. You have seen a man who used to sing ridiculous sentimental songs leave them off. You have seen a man who took snuff copiously, and who generally had his breast covered with snuff, abandon the vile habit.

A wife is the grand wielder of the moral pruning knife. If Johnson's wife had lived, there would have been no hoarding up of bits of orange peel; no touching all the posts in walking along the streets, no eating and drinking with disgusting voracity. If Oliver Goldsmith had been married he would never have worn that memorable and ridiculous coat. Whenever you find a man whom you know little about, oddly dressed, or talking ridiculously, or exhibiting any eccentricity of manner, you may be tolerably sure that he is not a married man. For the little corners are rounded off, the little shoots are pruned away in married men. Wives generally have much more sense than husbands, especially when the husbands are clever men. The wife's advices are like the ballast that keeps the ship steady. They are like the wholesome, though painful, shears, snipping off little growths of self-conceit and folly.

ELECTION RETURNS.—San Francisco has been gaily decorated with national flags since the result of the Presidential election, on Tuesday, became known. California has given from 16,000 to 20,000 majority for Lincoln and Johnson. New Jersey and Delaware are the only States known to have gone for McClellan.

DETAINED.—The Pacific Mail steamship Golden Age will be detained until Monday next. The detention is at the request of many of the bankers, who have been delayed in their preparation for the shipment of treasure.

TO CORRESPONDENTS.—We have received a communication from "F. A. H.," which will appear next week. Several items of interest which have been furnished us by a friend from Como, are unavoidably postponed until next week.

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feel it our duty to warn such parties of this error, and herewith append that section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

By the above extract it will be clearly seen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

ATWILL & CO'S

Washoe Agency—Commercial, Real Estate and Mining,

AT VIRGINIA CITY, NEVADA.

ATWILL & CO. continue to give prompt and faithful attention to all Orders and Commissions forwarded to them. Having been in the State since April, 1860, they are well informed of the value of every kind of property, either Real Estate or Mining Interests, as also of almost every firm or person doing business.

To Prospectors.

THE Directors of the San Francisco PACIFIC METALLURGICAL WORKS offer the following inducements to Prospectors:

NOTICE.—Knowing it will benefit our country to have it well prospected, we agree, if any party will forward us samples of minerals of any kind for assay, express paid, inclose TWO DOLLARS for the same, to return them a correct assay, with the best method of working, and feasibility of having the same worked in this city.

WORKS—North Beach. OFFICE—511 Sacramento street. Box 511, Post Office, San Francisco. [v9-20tf

Volcanic Smelting Furnace.

PERSONS desiring information as to the Use and Economical properties of this Furnace, and intending to make use of the same, when satisfied of its superiority over all other means of reducing ores and separating metals from the sulphurets, can obtain all needed explanation and advice in regard to the same, and the terms of sale of rights to use the same, on application to Col. J. D. Stevenson, or Mrs. E. J. Hall, Proprietress, 633 Third street, San Francisco.

Drawings may be seen at the office of Col. J. D. Steveuson, No. 614 Merchant street.

The time required for reducing ores by this Furnace is from three to eight hours, and the amount of fuel only one-tenth as much as is consumed by other processes.

The process of condensation is applied to this Furnace which will save all those portions of precious metals which usually escape in a volatile form.

The attention of all interested in the subject is requested to examine the important results obtained by this process.

Parties wishing will be allowed to erect a trial furnace of a capacity for smelting one ton or more, on signing an obligation to pay the usual fee for the right to use it, should they continue to make use of the invention for a longer period than two months.

v9-20tf MRS. E. J. HALL, Proprietress.

DIMPLES.—Dimples are the perpetual smiles of nature—the very cunningest device and lurking place of love. When earth is dimpled by dells and valleys, it always seem to laugh; when the ocean is dimpled by the breeze, it sparkles with joy beneath the sunshine of heaven. We cannot look for frowns on a dimpled face; frowns and dimples will not associate together. How soft, how roguish, how beautiful are the dimples in the elbows and shoulders, the pretty hands and feet of the rosy babe. Mothers dote upon these darling dimples, and delight to kiss them. But perfectly enchanting dimples, at least to the eyes of an enthusiastic young man, are those which come peeping out of the cheeks around "sweet seventeen," when sweet seventeen essays some arch-provoking sally, peeping out and flying away the moment after coming and going with the most bewitching coquetry.

A NOTABLE DEATH.—The late English mails bring full particulars of the death of Captain Speke, the celebrated African explorer. It appears that he was suddenly killed on the 15th of September by the accidental discharge of his own gun, while shooting in the neighborhood of Corsham, Wilts. The charge passed through his chest close to his heart, and he died in ten minutes. His age was 38 years. The remains were conveyed to his father's home at Ilminster. It is understood that Captain Speke, at the time of his death, was preparing for another expedition in the direction of the Nile's source.

DEPARTURE.—Mr. Austin, Superintendent of the Pacific Iron Works, of San Francisco, and lately on a visit to this city, left us by this morning's stage to resume his duties at the Bay. Mr. Austin was the designer and manufacturer of the engine and other machinery of the Midas mill, now building in Telegraph Cañon. The fine work that we have seen evinces his ability as a machinist and engineer. —*Reese River Reveille, Nov.* 1.

WOOL GROWING.—Collinsville, in Solano county, has raised and shipped more wool this season than any other township in the State of the same number of inhabitants. The cultivation of the tule land is a perfect success. The drought throughout the State has proved a benefit in this place. Its corn, potatoes, wheat, barley and onions, cannot be beat in any other location.

THE President is reported to have said, in a recent conversation, that "the reason why we have had no more military successes was because it was 'diamond cut diamond, West Point against West Point; that our military school was the best in the world as would be seen if the graduates should ever be on one side against any foreign enemy."

EDITORIAL CHANGE.—The Rev. Stephen Hilton, recently arrived in California, has succeeded the Revs. Cheney and Sawtelle in the editorial management of the Evangel, a Baptist semi monthly published in this city.

How to Read Shoulder Straps.—The rank and "arm" of military officers are designated as follows: The shoulder straps of a major-general bear two silver embroidered stars, one at each end of the strap. A brigadier-general has one silver star only. A colonel has a silver embroidered sprend eagle; a lieutenant-colonel has two silver embroidered leaves, one at each end of the strap; a major has two embroidered gold leaves, similarly placed. A captain has two gold bars at each end of the strap; a first-lieutenant one gold bar at each end; a second-lieutenant no bar at all. The cloth of the strap, by its color, distinguishes the "arm" of the service. For general and staff officers, it is dark blue; for artillery, scarlet; for infantry, sky blue; for riflemen, green; and for cavalry, orange color. Non-commissioned officers are indicated by "chevrons" or stripes on the coat sleeve, in the form of a letter V. Corporals wear two stripes; sergeants three; orderly-sergeants have a lozenge or diamond-shaped figure within the angle of the chevrons. Sergeant-majors have the three stripes of a sergeant completed into a triangle, base uppermost.

Profits of the Diamond Trade.—It would appear from the following paragraph that experienced dealers in diamonds can not only make an exceedingly close calculation as to value of diamonds, but that they are also enabled to make a large profit out of the trade in those precious stones:—An executor, in London, not long since, had to dispose of certain diamonds. He held the receipts for the money paid for them by the testator. One diamond cost $2,500 and another $1,000. Two diamond merchants in London were separately consulted (without the knowledge of each other), and each valued the diamonds within a few pounds of the same amount. The diamond which cost $2,500 was valued at $900, and it was admitted to be a very fine one. The one which cost $1,000 was valued at $350.

The Whitworth Rifles of the Southern Soldiers.—A correspondent with Sherman's army in Georgia, makes the following remarks about Confederate fire-arms:—"The Whitworth rifle greatly in use by the rebel skirmishers and sharpshooters, is a weapon to be much feared, as persons nearly one mile and a half from the rebel skirmish line have been wounded when they thought themselves safe from anything except solid shot and shell. One soldier was standing upon a log, crossing a creek about one mile and a quarter from the nearest rebel line of rifle pits, where I was talking to him, when one of these fatal messengers came crashing through both his thighs, and with this mortal wound he sank into the water. These bullets break the bone of a man's limb like a solid shot from a cannon. Rebel deserters say that each division of the rebel front is furnished with about fifty of these rifles, which are used in their skirmish line. The inventor of these guns is the same as that of the Whitworth rifled cannon."

Vote of San Francisco.—The remarkably large vote of the city on Tuesday, viz: 21,026, surprises nearly every one. Some six weeks ago Mr. Langley, pretty good authority, stated that the vote would reach twenty thousand, which opinion was combated at the time as extravagant. But he gave his reasons, one of which was the great increase of names in his "Directory" for this year over that of four years ago, some ten or eleven thousand. But the vote has exceeded even his estimates by a thousand. The reasons for so large an increase are several: the return of miners from the Territories, the return and voting of soldiers, immigration, natural zation, and the general increase in the population of the city.—*Call.*

A Famous Swimming Match recently took place in the British Channel between Mr. Herschell of the French navy and Capt. Saunders, an Englishman. The course was five measured miles at sea, with rather a high sea running. The Frenchman took the lead at first and kept it up for a long time; but was ultimately passed by Capt. Saunders. The distance was accomplished by the winner in one hour fifty-six minutes and twenty-eight seconds.

The Panama Company made their usual quarterly dividend of 5 per cent., payable Oct. 6. Seventy-five per cent. of the earnings of this prosperous concern are in gold, and we understand the directors have recently made the salaries of all their New York employees equal to the rates they were receiving in a gold-paying currency before the year 1861, so as to equalize their remuneration with the agents and other servants of the company on the Isthmus and the Pacific coast.

As the eagle dips his wings in the crystal spring, to beautify and strengthen them for his upward flight, so should the young go to the fountain of literature and science to adorn and strengthen their minds, that they may be qualified to rise to a sphere of usefulness in the world.

IMPORTANT DISCOVERY
— IN THE —
Photographic Art.

Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.

[PATENT APPLIED FOR.]

The undersigned would announce to the public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a

SOFTNESS, CLEARNESS AND DELICACY OF TONE

unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.
In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.
"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.
☞ The public are invited to examine specimens at my Gallery. ☜
JACOB SHEW.

THE FIRST DISCOVERY OF GOLD ON THE FEATHER RIVER—GEN. BIDWELL.—The Butte county (Oroville) *Record* remarks :

The first gold was, in an early day, discovered on Feather river, on the bar, at Hamilton, in Butte county, by the old pioneer and Unioo staudard bearer of this district—Gen. John Bidwell. He was the first white settler to explore and thoroughly "prospect" this wild, mouutainous and appareutly barreo region. Bidwells Bar, once a great miuing point, and for several years the county seat of Butte, was discovered by him. Is was by thus adventuring, and by the willing labor of his own hands upon the rough sand bars of Feather river, that he accumulated sufficieot means to purchase and commence the improvement of his present great farm. By years of industry, close attention to business and good fioanciering, he has secured the finest aod most valuable property in the State. His farm is under the highest cultivation, his extensive orchard and vineyard are of the choicest selection, and he has one of the most magnificently constructed flouring mills in the State. Iu fact, Gen. Bidwell was the first to develop the mineral and agricultural resources of Butte—to open up her roads to trade and wealth—and by his liberality and progressive spirit has won the respect and esteem of all.

MINING AND SCIENTIFIC PRESS.—This well conducted journal has entered upon its ninth volume. It it a sterling periodical, and deserves encouragement.—*Territorial Enterprise*

1852. 1864.

TWELFTH YEAR OF PUBLICATION.

THE GOLDEN ERA,

Founded in 1853.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in the Golden Era.

The most popular Novels of the present day—

"THE DOCTOR'S WIFE," by Miss Braddon.

"OUR MUTUAL FRIEND," by Charles Dickens; published as Serials, from week to week, in THE GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the Contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California, and on the Pacific Coast; also correspondents and contributors of distinguished talent in the Atlantic States and Europe; including "Orpheus C-Kerr," Fitz Hugh Ludlow, G. B. Densmore, "Mark Twain," Dan De Quille, Florence Fane, Miss Emma Hardinge, Sarah E. Carmichael, Annie E. Fitzgerald, "Occasia Owen," Alice Mason, William Simpson, Chas. F. Stoddart, "Ina," H. C. Williston, "Albion," "Fairfax," Bonnevel, Mary Kyle Dallas, Margaret Hosmer, and many other accomplished writers of Fiction, Romance, Novels and Stories, Poetry, Essays, Sketches, etc., etc., comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States or Europe.

The proprietors of the GOLDEN ERA announce the receipt of advance Sheets of Miss M. E. Braddon's New Novel,

The Doctor's Wife,

The most brilliant effort of the celebrated author of "Aurora Floyd;" "The Outcasts;" "Three Times Dead;" "Lady Audley's Secret;" etc., etc.

"THE DOCTOR'S WIFE," now in course of publication in London, is universally pronounced to be Miss Braddon's greatest production. It will be completed in sixteen numbers of THE GOLDEN ERA.

THE GOLDEN ERA for Three Months.....$1 00

Sent from the Office to any Address in California and Oregon—Nevada, Washington, Idaho, Utah and Colorado Territories—the Atlantic States, Europe, and all parts of the World.

Subscriptions to be Paid in Advance.

ONE YEAR $4. SIX MONTHS $2. THREE MONTHS $1.

Take care to write distiuctly the name of the person; the name of the city, town or locality where the Post office is situated, and the name of the County and State, in order that the paper may be fully and accurately directed to every address.

THE GOLDEN ERA TO CLUBS.

Parties (living remote from localities where agents are located) forming a club of five yearly or half-yearly subscribers, and forwarding the subscriptions (by letter registered and postage paid) to the office of publication in San Francisco, will be entitled to an additional copy of The GOLDEN ERA for the term of one year, or to retain the equivalent in cash.

AGENTS in every part of the State receive subscribtions or the GOLDEN ERA.

POSTMASTERS in California, Oregon, and neighboring Territories, obtaining subscriptions for the GOLDEN ERA and forwarding the same, with name and address of the subscriber, will be allowed a commission therefor.

PARTIES residing in localities where no Agents are established will forward their subscriptions by mail.

SUBSCRIBERS will be careful in writing as plainly and fully as possible, the direction of papers to be sent to any part of California, the Atlantic States, or elsewhere.

Now is the Time to Subscribe.

TO ADVERTISERS!

Best Advertising Medium—The "Golden Era" is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village, and mining and agricultural precinct in California, and offers unusual and unequaled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not as large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

GOLDEN ERA POSTAGE.

POSTAGE on the GOLDEN ERA, to Mail Subscribers, in California and throughout all the States and Territories of the Union, per quarter, (3 months).... 5 cts. To be paid quarterly, in advance, either at the Office of Mailing or Delivery.
POSTAGE on the GOLDEN ERA, Single Copies, transient, to be prepaid by stamps..... 2 cts.
POSTAGE on the GOLDEN ERA, to Mail Subscribers in the county (San Francisco) where published..... Free.

TO MAIL SUBSCRIBERS.

The Golden Era, for One Year..... $4 00
The Golden Era, for Six Months..... $2 00
The Golden Era, for Three Months..... $1 00

Subscriptions to be Paid in Advance.

DUNBAR'S
PATENT SELF-ADJUSTING
Piston-Packing.

Requires no Springs or Screws; Is always Steam Tight, without excessive friction, and never gets slack or leaky.

IT WILL SAVE EACH SEASON MANY TIMES ITS COST In friction, time, steam and power. No engine, old or new, should be without it. It can be easily fitted to old or new Pistons.

Having obtained the Agency of this VALUABLE IMPROVEMENT, I am prepared to furnish it wherever desired. For further information, address HENRY S. SMITH,
23v8 Golden State Iron Works, San Francisco.

IMPROVED WATER-WHEEL,
—PATENTED BY—
JOHN TYLER, WEST LEBANON, N. H.

Giving the Maximum Power with the Minimum Cost; Having the Following as Some of Its Advantages Over Others—Giving the Best Percentage of Water Used, Durability,

It runs Equally as well IN Back Water as OUT,

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—It can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 500 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address
SMITH & HANSCOM,
15v8-3m Golden State Iron Works, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $60 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

FARRAND'S
Oscillating Amalgamator,
RECEIVED THE
ONLY PREMIUM
AWARDED FOR AMALGAMATORS
At the Recent Industrial Fair
OF THE
Mechanics' Institute of San Francisco.

Committee of Awards.

O. BELDEN, O. GOAN, W. T. GARRATT, GEO. JOHNSON, H. P. WAKELEE, C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall, and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, while the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulphurets, as also for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,
R. L. OGDEN, Agent, SAN FRANCISCO.
S. E. corner Montgomery and California streets.
v9-19

Disney's Cylinder Amalgamator.
The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.
San Francisco, June 23, 1864. I-3m

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percetage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER.

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 864.] HEPBURN & PETERSON.
nov8 3m*

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aginst purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.
sep21

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.
San Francisco, April 1st, 1864. 14v8-tf

SALMON'S
PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any other yet presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to clean and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a Stone or Iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of wings placed like a screw propeller on the muller-shaft, force a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarity of propeller-screw and side wings, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The Inventors of this machine are practical Mechanics as well as experienced miners, and the machine offered by them to the public is the result of long experience and close observation. Manufactured at the San Francisco Foundry, San Francisco, Cal. by

J. & W. C. SALMON,

To whom all orders should be addressed. 15

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of Iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons desiring the same. The Subscriber is also perfecting a HAND MACHINE for Miners engaged in prospecting, which will work 25 pounds of ROCK at a time, and which will weigh about 125 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,
At the Novelty Iron Works, Nos. 37 & 39 Fremont street.

Domestic Produce.

The *Evening Bulletin* is advised by an old resident in the Southern part of the State that the crops of corn, hay, barley, beans and potatoes are large, particularly in the counties of San Bernardino and Los Angeles. They were early warned of short crops in the northern part of the State, whence they had formerly received large supplies, and went immediately to work, plowing, planting and irrigating, consequently they have raised this year large crops of grain and hay. The southern corn crop of this year, as above stated, is said to be equal to the entire aggregate of the ten past seasons, contracts for which have been made in the field at 1½c ₱ lb in bulk, the buyer furnishing the sacks. The corn now arriving is of last year's surplus; but the Cur-lew's cargo, yet to arrive, is of the new crop. The barley crop south is also much larger than that of any previous year, and sells (below) at 2c ₱ lb; while hay is very plentiful and cheap. Heretofore, nearly all the hay consumed in the southern counties came from here; now the tide has turned, and they have a very large surplus, which sells at San Bernardino for $5 ₱ ton and at Los Angeles for $7 ₱ ton in trade barter from the stores. From Santa Clara county we hear of a single farmer refusing 4c ₱ lb for his entire wheat crop, estimated to be worth, at this price, $63,000. This, be it remembered, is not this year's crop of wheat, but one held over from previous seasons. We have no doubt that there are many other farmers in our own State, but especially in Oregon, who will he able to unearth thousands of tons of wheat, long since buried, waiting for this very harvest of big prices to arrive. Now we will see who will sell, and who are disposed to hold until New Yorkers and Chileans run away with their markets, as in years gone past.

Our Patent Agency.

The Patent Agency of the Mining and Scientific Press has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of Letters Patent from the United States and foreign Governments cannot be over-rated, and the Proprietors of the Press, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

Inventors and Inventions.—Let us not cheapen inventions, but be kind to the inventors; beware of killing the goose that lays the golden egg! Many inventors die before the hour of triumph; others falter by the way. Invention is a struggle, a conflict, almost a battle; if the victors are rewarded, the dead are honored and the wounded carefully attended to. Clorify the inventors who succeed; cover with an indulgent self-respect the faults of those who fail; and soothe the last years of the wounded—those invalids of industrial science who have known only the pains of the fight, and always remained ignorant of the joys of victory. —[Dumas.

Mining Companies and others connected with the Mining Interests of California, will find all possible desired information in the *Mining and Scientific Press* of San Francisco, which is an ably edited Journal, smartly handled, and well up to the times. The Mining Companies of California, are awake to the advantages of having their Mining Notices, comprising Assessments, Dividends, Elections, &c., concentrated in the advertising columns of one Journal, as we notice in the issue of the *Press* of May 7th, there are no less than seven pages of this interesting matter.—*U. S. Mining Journal, Railroad and Financial Advertiser, New York.*

Old Father Bushnel, of Vermoot, used to say that the best criticism he ever received on his preaching was from a little boy who sat at his feet, looking up into his face, as he was preaching in a crowded house. As he was going on very earnestly, the little fellow spoke out, "You said that afore." It is thought that some other preachers of long sermons may be open to the same criticism.

A young man in Wisconsin was recently stung on the wrist by a bee, and died twelve hour after.

Advertising Circular.

The Proprietors of the Mining and Scientific Press would call the especial attention of Mining Secretaries, Trustees and Shareholders, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The Press enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the Press is less by one half than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the Press, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the Press or some other paper.

6th. Many copies of the Press are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Our rates are uniform as well as moderate. Advertisements will be taken from the forms and printed on slips or as circulars, for sending personal notification to stockholders, whenever desired, at $1 per hundred.

9th. Advertisements in the columns of the Press, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

10th. Blanks for filling out advertisements of assessments or notices of sale are furnished gratis. Our rates of advertising, and any other information desired, will be freely given upon application at the office.

Last, but not Least.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal.* Published in this, the greatest mining field of the world, we desire that the Press shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

DEWEY & CO.,

Augustus Shriver	"	150	15 00
Samuel Brimmer	"	150	15 00

And in accordance with law, and an order of the Board of Trustees, made on the 5th day of October, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the hotel of J. A. Black, on Saturday the 26th day of November, 1864, between the hours of 11 o'clock, A. M. and 1 o'clock P. M, of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

J. J. FINDLEY, Secretary pro tem.
Office, Rock Creek, Calaveras County, Cal. 20-3

Enlarged.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

A DECISION CONCERNING THE LIABILITY OF INDIVINUAL MEMBERS OF AN INCORPORATION, TO THE COMPANY'S CREDITORS.—A suit was decided in the County Court of San Francisco, on Thursday of last week which involves an interesting question to mining and other stockholders. The suit was brought by George A. Johnson and others, assignees of a claim against the Cosette Silver Mining Company, of which the defendant, John B. Delabigne, was a stockholder, to recover the sum of $180.13, being defendents proportion of the debt. Delabigne had refused to pay any part of the debt, alleging as a reason that his stock had previously been sold out by the company for delinquent assessments, and that his liability for any of the company's indebtedness ceased at that time. He also maintained that if liable at all, it was only in the nature of a suretyship and that plaintiff must first exhaust all his remedies against the company, and that until this was done no action could be maintained against him for any portion of the company's debts. Judge Cowles based his decision in the case upon the rule laid down by Judge Cope, of the Supreme Court of California, in the case of the Mokelumne Hill Canal Company *vs.* Woodbury, 14 Cal 265, establishing the doctrine that an individual incorporator does not stand in the relation of a surety to the creditors of the company, but his responsibility is that of a principal debtor, and it commences with that of the corporation and continues during the existence of the indebtedness. Nor is it in any case contingent merely, but absolute and unconditional. It has frequently been held that members of a corporation who are answerable persoually for the company's debts, stand in the same relatiou to the creditors of the corporation as if it was a copartnership only. Jvdgment was rendered in favor of plaintiffs for $180.13 with interest from date, at one and a half per cent per month until paid, in gold coin.

A NEW silver mine, of aunsual value, has been lately discovered in Sweden. At a foot below the soil the vein is so rich that heavy blocks of silver have been found.

Mining Notices--Continued.

Arizona Consolidated Mining Company, Enreka District, Arizona Territory.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 19th day of October, 1864, an assessment of 20 cents per share was levied upon the Capital Stock of said Company, payable immediately, in United States gold coin, to the Secretary, at the office of the Company, No. 723 Montgomery Street, San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 19th day of November, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 3d day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

N. G. FRENCH, Secretary.

Office, 723 Montgomery street, San Francisco. 17-4

Blue Ledge Gold and Silver Quartz Mining Company, Kelsey District, El Dorado county, California.

And in accordance with law, and an order of the Board of Trustees, made on the 19th day of September, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at public auction at the salesroom of Maurice Dore & Co., No. 327 Montgomery street, San Francisco, California, on the 14th day of November, 1864, at the hour of 12 o'clock M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

T. L. BIBBINS, Secretary.

Office, No. 302 Montgomery street, San Francisco. [18

Sisters and Augusta Gold and Silver Mining Companies. Location—Augusta District, Lander County, Nevada Territory.

Notice is hereby given, that at a meeting of the Board of Trustees of said Companies, held on the 19th day of September, 1864, an assessment of 15 cents per share was levied upon the capital stock of said Companies, payable on the First day of October, 1864, in United States gold or silver coin to the Secretary, at the office of said companies, or to Jonn Moffet, Superintendent, at the mine.

Any stock upon which said assessment shall remain unpaid on Saturday the 29th day of October, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 19th day of November, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

L. C. DODGE, Secretary.

Office No. 406 Front street, San Francisco, Cal. September 20th, 1864. 13-4t

Postponement.—The advertisement of stock delinquent on the above assessment is hereby postponed until Tuesday, November, 8th, 1864. By order of the Board of Trustees.

18 L. C. DODGE, Secretary.

Postponement.—The advertisement of delinquent stock on the above assessment, is postponed until Saturday, the 19th day of November, 1864, and the sale thereof is postponed until Monday, December 5th, 1864. By order of the Board of Trustees. 19 L. C. DODGE, Secretary.

Steamboat Silver Mining Company, Star District, Humboldt County, N. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 17th day of October, 1864, an assessment of one dollar per share was levied upon the Capital Stock of said company, payable on the 18th day of October, 1864, in United States gold coin, to the Secretary, or to Jas. S. Maclean, Superintendent at the mine.

Any stock upon which said assessment shall remain unpaid on Saturday, the 19th day of November, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 5th day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

S. O. PUTNAM, Secretary.

Office, Northeast corner Jackson and Front streets, San Francisco. 17-4

Postponement.—The advertisement of stock delinquent on the above assessment is hereby postponed until Saturday the 26th day of November, 1864, and the sale thereof until Monday, the 12th day of December, 1864. By order of the Board of Trustees.

19 S. O. PUTNAM, Secretary.

Tallulah Mining Company, Sierra District, Humboldt County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 5th day of November, 1864, an assessment of $2.50 per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary at the office of the company, No. 418 Montgomery street, San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 10th day of December 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 24th day of December, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

GEORGE A. HILL, Secretary.

Office, No. 418 Montgomery street, San Francisco, California. nov5-19-4

United States Mining Company, Virginia District, Nevada Territory.

Notice.—There are delinquent upon the following described stock, on account of Assessment levied on the 30th day of September, 1864, the several amounts set opposite the namca of the respective shareholders, as follows:—

And in accordance with law and an order of the Board of Trustees, made on the 30th day of September, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the salesroom of Maurice Dore & Co., No. 327 Montgomery street, on the 16th day of November, 1864, at tha hour of 12 o'clock, M., of said day, to pay said delinquent assessment thereon, together with the costs of advertising and expenses of the sale.

J. M. BUFFINGTON, Secretary.

Office, Nos. 8 & 10 Covernment House, corner Washington and Sansomo Streets, San Francisco, Cal. oct29-18

Wilson Copper Mining Company, Gardea Bar District, Placer County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 31st day of October, 1864, an assessment of 50 cents per share was levied upon the capital stock of said Company, payable on the 1st day of November, 1864, in United States gold and silver coin, to Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday the 3d day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold, on Saturday the 17th day of December, 1864, to pay the delinquent assessment thereon, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

W. L. KIRBY, Secretary.

Office, Room 8, No. 611 Clay street, San Francisco. nov5-19-4

A NEW LOCOMOTIVE.—The Nevada *Gazette* says that Mr. L. Shankland, of Montezuma Hill, in Nevada county, has just completed a working model of a new locomotive which he claims will drive a train of cars up an incline of 1000 feet to the mile. Mr. Shankland has been at work upon the machine for several years and has just brought it to perfection.

INFINITE toil would not enable you to sweep away a mist, but by ascending a little you may often overlook it altogether. So it is with our moral improvement; we wrestle fiercely with a vicious habit, which would have no hold on us if we ascend to a higher moral atmosphere. It is by adding to our good purposes, and nourishing the affections which are rightly placed that we shall be able to combat the bad ones,

THE NEW BRIDGE which is to span the Ohio river between Cincinnati and Covington will cost $1,500,000, and in length will exceed the Niagara bridge some feet. It will be suspended ninety feet above high water, enabling the largest steamers to pass under without difficulty.

Reports of the Exhibition.—Owing to the omission of exhibitors of certain classes to elect committees of award, the Executive Committee of the Institute, at its meeting of Oct. 27th, authorized the President to select a special committee to act in the premises and report upon articles thus inadvertently omitted from the several reports. The report of this special committee, together with a general report of the Executive Committee, will appear in due time.

To News Agents.—After this date we shall furnish no dealers, outside of this city, with the PRESS upon any other terms than those of regular subscription. Those who will forward us the names of new subscribers shall receive liberal commissions.

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal news agents.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alteration, which they may desire made in their advertisements, at their earliest convenience. New advertisements should be sent in as early as possible.

DEWEY & CO., Publishers.
Office, 11 Government House, corner Washington and Sansome streets, San Francisco.

Mining and Scientific Press Patent Agency.

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be witheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enabled to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on prosenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, prosecuting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new forms of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and 6 months	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every caveat	10
On every application for a patent	15
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges an appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

DEWEY & CO., Agents,
Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

BY AUTHORITY OF THE STATE OF CALIFORNIA.

Having fully complied with the law by a deposit of $525,000 bonds of the State of California and the United States

17 6m General Agents.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—EDS. PRESS.]

Industrial Drawing Academy.

No. 408 Pine Street, near Montgomery.

Open for pupils every Evening from 7 to 10 P. M. Architectural and Mechanical Drawing classes now forming. Parties wishing Drawings executed by practical Draughtsmen in either of those branches may have it done by calling at the Academy.

BRANDRETH'S PILLS.

This Medicine often Cures when all others have failed. They prevent Apoplexy; they Cure Diseases of the Heart and Nervous Diseases, and as a

Purgative and Bilious Pill,

They have not their equal in the World. Employed according to directions, accompanying every box of new style, they produce

Great Purity of the Blood and the System Generally,

Causing only the removal of vitiated matters which have become useless or injurious, and securing in the reconstruction of diseased parts of nothing but sound and healthy materials.

BY THE USE OF BRANDRETH'S PILLS

OCCASION

The Actual Decrease of the PRINCIPLE OF DEATH, and an Increase of the Vivifying, the Life Principle.

B. BRANDRETH,
294 Canal Street, New York.

W. F. BRANDRETH,
Office at Crane & Brigham's, San Francisco.

By sending $1 in coin to the above address, five boxes of pills will be sent to any part of this coast or the Interior, Free of charge. 16-3m4c8p

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

EASTERN FINANCES.

The Steamer Constitution, from Panama, places us in the receipt of Eastern mail advices to the 24th ult., at which date trade was begining to show some indications of improvement in New York and Boston. The new and important staple of petroleum had become a leading item of export, and shipments of gold abroad were also increasing. The latter was supposed to be owing to financial derangements in England and the falling off in shipments of breastuffs from New York. Money on Wall street had been in good supply and payments on the new $40,000,000 loan were being made without any difficulty. The first installment was payable one half cash and one half in one year certificates.

The import entries at New York, exclusive of foreign specie from January 1st to Oct. 20th, amounted to $181.000,000, showing an increase of some $35,000,000 as against same period of last year. The export clearanees of domestic produco and miscellaneous goods including foreign articles exported from the 1st of January to the 18th of October, amounted to (in currency). $180,000 000 against $142,000,000, same time last year. Exports of gold and silver from New York from the 1st of January to 22d October, amouuted to $36,000,000, as against $38,600,000 for a like period in 1863.

BULLION.—For the week ending November 12th, over four tons of bullion were shipped from Virginia City, worth, according to assay, $223,087.70.

HANSBROW AND REDDING'S HYDRAULIC ENGINE.—Arrangements are heing made to put one of these engines in operation, in Humboldt County, Nevada.

[Written for the Mining and Scientific Press.]

THE MINES OF THE SIERRA NEVADAS.

EDS. PRESS :—There appeared in the PRESS of July 16th a eommunication by Pundit, purporting to be a reply to "F. A. H." For the relief of "Pundit" I will venture the opinion that the great system of true fissure lodes, destined to eclipse all past mining experienee, existing at or near the western hase of the Sierra Nevada mountains, is already being prospected and successfully worked, too, at Brown's Valley and other points along the range. Notwithstanding he so confidently asserts that "fluids and solids expand but a fraetion of their respeetive bulks before being volatilized," the writer respectfully submits that he still must consider it an open question. I am eompelled to pass over his "reply" without further notice, as I will not be so irrelevant as to offer a reply to his shallow attempt at wit. He should at least show some respect for the snbject under discussion, even if he has none for the writer. In the meanwhile, if "Pundit" knows any facts at variance with the theory of the igneous formation of metallic veins, he will more uearly meet the requirements of fair diseussion by presenting them.

Are metal bearing veins of igneons origin? In considering this question I shall first attempt to show that the solid earth is the product of the ignition and combustion of the elements of which it is composed. "In the heginning God created the heavens and the earth; and the earth was without form and void. And *darkness was upon the face of the earth;* and the spirit of God moved upon the face of the waters; and God said *let there be light*, and there was light."

In the language of that great astronomer, the lameuted O. M. Mitchell, "it must be allowed that the further we advance, the deeper we penetrate the arcana of nature, the more emphatically does it declare the probability of the truth of the nebular cosmogony of the universe. How could this earth have been without *form* and *void*, if it had been already fashioned as a globe? How could it be void if its solid rocks already rihhed its sides, and its huge mountain ranges lifted their barriers to the clouds? The earth was without form and void. The matter for its future formation existed, but as yet no fashioning had been accomplished—all was without form. Primordial atoms filled the deep profound. God was the mighty center; Infinitude alone could the tell houndary. And darkness was upon the face of the deep; what deep? Surely not the ocean, for as yet there was none. It was the great deep of unfathomabls space; a deep so profound that uo line could fathom its profundities, no eye but God's could penetrate its dark domain." To-day the earth exists as a vast globe of solid matter, yet in the beginning the great Author of all things assures us that the earth was without form and void—in other words, matter existed in its elemeutary or gaseous state. It is a most significant fact that all solid matter may he expanded into invisible gas, through the agency of its imponderable properties—light, heat and electricity. When matter existed in its elementary state, darkness was upon the face of the deep. All the light and heat that has radiated into spacs from the beginning, was there latent in

combination with matter. Electricity, being a property of matter, was also latent; yet, unlike caloric, on being liberated, it is attracted by matter with a force varying inversely as the square of the distance. The absorption of the exact quantity of caloric and electricity that has been liberated from the beginning, by the matter of which our earth is composed, would again render it gaseous. The density of the sun, the only self-luminous body, whose specific gravity has been ascertained, is 1.4186—that of the earth being 5.6747. Just the amount of heat that would expand the earth to the density of the sun would render it self-luminous. The interior heat of the earth and the igneous rocks that form so large a portion of its crust indicate that it is an extinct sun. It is still a self-luminous body in our own era, and differs from the sun only in degree. At a late eruption of Mauna Loa the light emitted was such as to turn night into day, over a large area. It is easy to imagine the effect, supposing the earth were filled with volcanoes, and its interior heat was such as to sustain them constantly in action.

The earth is found to be composed of something over sixty elements, which, in the beginning, the Almighty declares were without form and void, and, according to known laws, these gases were mechanically mixed and equally diffused throughout space. When the elements chemically combined to form solid matter would the evolution of light and heat be the result? In considering this question I shall arrange and present a train of facts that are familiar to every student of chemistry. Oxygen combines with all the other elements (except perhaps fluorine). The combustion of bodies in oxygen is nothing but their combination with that element, the process, from the energy of the affinities, being attended by the evolution of light and heat. Of all the elements, oxygen is the most abundant; it forms 89 per cent., by weight, of all the water, and 23 per cent of the atmospheric air of our globe; exists in all rocks except rock salt, and constitutes at least one-third of the weight of the earth. When hydrogen is mixed with oxygen, the mixture takes fire on the approach of a flame, or when a spark of electricity is passed through it, and explodes violently, and water is the only result. Without water the operations of the chemist would come to a stand. The metals of the alkalies proper, potassium, sodium, and lithium, exist in abundance. These elements have such an affinity for oxygen that when brought in contact with water they instantly decompose it, with the evolution of light and heat. When the metals of the alkaline earths, barium, strontium, calcium, and magnesium, and the metals of the earths proper, thorium, aluminum, glucinum, zirconium and yttrium, are heated in air they burn with a vivid light and form oxyds. Most of the other metals take fire on being heated in air or oxygen and burn with intense heat. Some of them require the electric spark to cause them to combine with oxygen. The affinities of sulphur are powerful. With many metals, when heated with them, it combines, the combination being accompanied with the development of light and heat. In other words metals undergo combustion with sulphur, just as with oxygen or chlorine. Prof. Johnstone asserts that when silicon is heated in air or oxygen it burns, combines with oxygen, and forms silica. Silica consists of 48 per cent. of silicon, and 52 per cent oxygen. Silicon is the most abundant of all the elements except oxygen, of which the solid matter of our earth is composed.

From the foregoing train of facts the following truths are apparent:

First—The matter composing our earth in its elementary state is highly combustible.

Second—When the elements chemically combine, intense light and heat are evolved.

Third—The elements *are* thus chemically combined, and, consequently, the solid matter composing our earth is an igneous product.

"And the spirit of God moved upon the face of the waters," or, in other words, the laws of matter acted upon the elements and light was the result. A spark of electricity causes hydrogen and oxygen to combine and form water. In the beginning the elements were in a gaseous state, and according to known laws were mechanically mixed and equally diffused; consequently when oxygen and hydrogen, combined atoms of the alkaline metals, potassium, sodium, etc., were in contact with water. Such is the avidity of those metals for oxygen, that the atoms in contact with water would instantly burn with a continued flame. This continued flame would cause other atoms of oxygen and hydrogen to combine, thus extending the flame to the whole mass—the temperature increasing until all the elements combined or oxydized to form solid matter. Thus a fire started by a single spark of electricity would not cease to burn until the elements combined in every proportion and form that an elevated temperature will produce. Electricity is a property of matter. As the density of matter is the measure of its capacity for caloric, so also the density of matter is the measure of its capacity for electricity.

A given quantity of water, on being expanded into vapor, has power to render latent a definite proportion of electricity, which is set free on the vapor being condensed into water. Free electricity is attracted by matter and diffuses over it with the rapidity of light. Suppose there exists in space, held in its proper orbit by the laws of gravitation, a vast body of nebulous matter, composed of the elements in a gaseous state, in the same proportion as they are found to exist in our earth. In consequence of the intense cold of surrounding space, condensation would ensue, and sparks of free electricity would pass between bodies of the aggregating mass unequally charged as from cloud to cloud. The process of chemical combination would instantly commence, water would form, the alkaline metals would take fire as they combine with oxygen, and the temperature of the mass would continue to increase as the elements united, and the result would be a self-luminous body like the sun, with its atmosphere of burning metals.

In regard to the method (proposed in a former communication) of determining the order of the formation of the igneous rocks, I think the possible importance of the subject demands further attention. It is estimated by geologists that the crust of the earth is sixty or eighty miles in thickness. The order of the formation of that part only has been determined that has been re-formed since water rested upon the earth's surface. The aqueous rocks are supposed to average some eight or ten miles in thickness, resting on a foundation of igneous rocks, some sixty miles or more in depth. The igneous or granitic rocks are composed of mica, feldspar, quartz and hornblende, in which are found all the metals known to man. Of the order of the formation of the igneous rocks we know nothing. While our knowledge of the formation of the earth's crust is so incomplete, it is in vain that the baffled miner seeks the revelation of the geologists to solve the problem of the formation of metallic veins.

When our globe was one molten mass from center to circumference, matter arranged itself according to its specific gravity, the lighter earths and metals upon the surface, and those of greater density at greater depth, subject, however, to such modifications in density as are produced by an increase of temperature. We find the native metals and sulphurets, in a matrix of quartz, bodies differing greatly in specific gravity at common temperatures. If we admit that the elements of which our earth is composed combined at a high temperature, then an elevated temperature must have a tendency to equalize the specific gravity of such bodies, or they would not be found thus associated. It is a well known fact that rocks and metals do not expand equally with an increase of temperature. The fissures that were formed during the upheaval of mountain ranges, were filled with intrusive matter from different strata in a molten condition. At each successive upheaval the fissures were filled with matter from a lower, and consequently denser stratum, and thus each stratum is represented, the matter filling each fissure being identical in composition with the stratum of which it is a chimney. Now if we ascertain the exact composition and ratio of expansion, at an increased temperature, of all igneous rocks and metal bearing veins, it would furnish data by which the order of the formation of the igneous rocks might be determined to the entire thickness of the earth's crust.

Geology, in the present state of the science, treats only of the formation of stratified rocks. It leaves us entirely in the dark in regard to the order of the formation of such combinations as were produced at an elevated temperature. Mr. Easton very justly remarks that "it must be confessed the exponents of the science of geology have done very little to advance the interests of mining. Miners have looked to geologists to answer difficult questions, and to achieve successes, in view of their superior knowledge; but their achievements have failed to be commensurate with their pretensions, until the miner now is but too ready to scout and ridicule all the proffered aid of geology. What we need is practice and theory conjoined; geology, or rather geognosy, applied to mining. Mr. Easton makes a suggestion, which, to say the least, is a move in the right direction. He says: "It would be a grand help to mining if we had a geological map of the State, extending along the flank of the Sierra Nevada, with the space ruled into meridians, parallel with the axis of the mountains—say five or ten miles apart—and also ruled at right angles, checkerboard like, and the rocks across the various intersections of the meridians marked on the map, commencing at the summit with granite and gneiss and on a direct line to the valley all the geological changes noted." The subject is worthy of a State survey, and while the corps of observers are collecting data for such a map, they should also collect specimens of all igneous rocks and veinstone, so far as practicable. The exact composition, specific gravity and ratio of expansion at an increased temperature of all such rocks should be ascertained, with a view of determining their place in the formation of the earth's crust. It is thus that the gap in geology might be filled and the structure of the earth crust and of metallic veins might be reduced to a simple mathematical question.

There also recently appeared in your valuable journal a series of articles entitled "The Formation of Metallic Veins." As the author is evidently in error in some of his statements and positions, I shall briefly notice his theory. It should be remembered that science is *truth* demonstrated, and a theory at variance with a single fact in its ample range must fall to the ground. The writer of these articles (Mr. Miles) takes the position that metal-bearing veins are of aqueous origin—that they are an after formation, due to the metamorphosis (as he terms it) of the wall rocks. He assumes that such metals as are found in quartz veins exist in atoms, and are diffused through the wall rocks, and that they, together with quartz, are subjected to chemical action, dissolved and carried over by water, and precipitated, in some mysterious manner, by electricity. He says: "The degree of heat sufficient to give quartz a molten condition would precedently volatilize all metals in contact with it," and, consequently, a metal-bearing vein cannot be of igneous origin. According to such authorities as I have at hand, quartz fuses as readily as platinum. On being broken up like sand, it melts readily before a compound blow-pipe. Bansen and Kischhoff assert that many metals do not volatilize before a blow-pipe. They say that "for the obtaining of the peculiar spectrum of iron, platinum, copper, and most other metals, these metals must be exposed to a much higher temperature than that of a gas flame, to which they impart no color. This high temperature is best attained by the use of the electric spark. So great indeed is the heat developed by this agent that a single electric discharge, passed through a gold wire, dissipates the metal into vapor." Our author imagines that sulphurets are exceedingly difficult of production by artificial means—that they require the aid of electricity in their formation. Draper, Comstock and Gregory agree in saying that "sulphuret of iron may be formed by touching a bar of iron, at a glowing red heat, with a roll of brimstone. The compound will fall in drops. The natural and artificial sulphurets are composed of precisely the same definite proportions, viz: iron 28 and sulphur 16. When the temperature is sufficiently elevated, sulphur will readily ignite and combine with many other metals to form sulphurets. The writer believes quartz veins are of very slow formation, and that they are endowed with sulphurets and native metals by a sort of galvanic process. He seems to ignore, or not to be aware of, the significant fact, that sulphurets are the product of the ignition of metals with sulphur; that the oxyds of the noble metals may be reduced by heat, and that these bodies are found in a matrix, itself the product of the ignition of silicon with oxygen. And, furthermore, Gregory asserts that "silicon occurs in nature only in a state of combination with oxygen, as silicic acid or silica, which is the chief ingredient of all soils and all rocks, except limestone, rock salt and coal.

The writer in question fancies the internal heat of our globe is due to the earth currents of electricity. When we consider the following facts, it will be perceived how inadequate the earth currents of free electricity are to produce such a result:

First.—In case of a spherical body, the distribution of free electricity is entirely superficial, each portion of the sphere is electrified alike.

Second.—In the process of telegraphing, the earth is used to return the magnetic current, and thus complete the circuit.

Telegraphing has been performed, under favorable circumstances, across a space two thousand miles in width. A thin wire has capacity to conduct sufficient electricity to overcome or neutralize the earth currents, and that too without being sensibly heated, and yet the broad earth has the conducting capacity of many wires. Our writer believes in the wide and atomic distribution of all the useful metals in the earth, and that these metals are traceable to the fossiliferous or stratified system of rocks. He has a good deal to say about the existence of metals in sea-water and about their being aggregated in veins by electrical action. He thinks it "extremely doubtful if metals of any kind separately existed in veins until after the advent of organic life. The idea may be thought fanciful in regard to organic aid in the sedimentary concentration of metals; nevertheless it may be a beautiful principle in the animal economy that infinitesimal deposits of gold, silver and other metals are due to the vital processes of living laboratories in the ocean depths." Yes, these metals have been aggregated by animalculæ, deposited in fissure veins by electrical action, instead of being precipitated in strata! The waters of the ocean undoubtedly hold traces of every metal, in solution, with which it has been in contact, as some miles in depth of aqueous rocks have been precipitated since water rested upon the earth's surface. The waters of the primeval ocean were strongly impregnated with the alkaline metals, as they are of the least specific gravity, are present in all surface rocks and exist abundantly in granite. To the mediæval waters were added solutions of metals of greater density, as each metal in succession was exposed through the fissures to the action of water during the upheaval and formation of mountain ranges. Sea-water may be termed the liquor of the earth, flavored with every element with which it has been in contact. But every fact in inorganic chemistry points to the period when the heat of the earth was so great that no water rested upon its surface. Requiring a higher temperature than 212° F. before they volatilize. Where were the metals then?

In accordance with his theory, I suppose Mr. Miles would answer, "they were widely and atomically distributed through the surface rocks." Very well. When those surface rocks were in a molten condition would these metals, with a specific gravity so much greater than any rock, have been likely to have floated with them upon the surface?

I believe it is admitted by all geologists that the surface of the earth was once flat, otherwise the existence of aqueous rocks containing the remains of marine plants and animals, upon our loftiest mountain ranges, could not be accounted for. It is contended that the circumference of the earth was then much greater than it is now, in consequence of the expansive influence of a much higher temperature than it possesses at the present era. It is also maintained that the irregularities in the earth's surface are due to the contraction of the earth, by loss of heat, since the solid crust began to form. Now when the first upheaval took place, the molten matter that filled the seams or fractures, was intrusive, and properly belonged to a lower and, consequently, denser stratum. We find metal-bearing veins to be composed of quartz, which, as we have already seen, is the product of the ignition of its elements, silicon with oxygen, containing sulphurets, which are the product of the ignition of metals with sulphur and native metal, whose oxyds when once formed are reduced by heat alone—facts indicating their igneous origin. And then we find them enclosed within walls of stratified rock, containing the remains of organized life, showing that metallic veins are intrusive. F. A. H.

Forbestown, Butte county, Cal.

[The above communication was written and placed in type ere we received the melancholy news of the death of Mr. Edward A. Miles, to whom allusion is made, and who also was the author of the articles signed "Pundit." We doubt not that "F. A. H." will grieve with us in the death of our friend, which abruptly silences forever this friendly discussion of these studious and important subjects.—Eds. Press.]

Thoughtful Legislation.—By a law of the State of Maine, any person who shall, to the acceptance of the selectmen, place a trough by the roadside, into which a stream of water shall be constantly kept running, is entitled to an annual deduction from the amount of his yearly taxes.

Generally a ton of iron expended on a railroad is worth a hundred fold the value of the same metal used up in forty-four pounders, but there are times when the reverse is true.

Glass milk pans are in use in England. This vessel is found wholly exempt from the liabilities to acidity, or the injurious effects of the lead in earthern or tin pans.

A ponderous gold guard-chain has just been completed at a chain and jewelry manufactory in Springfield, for a man in New York, who has a fancy for "big things." It is four feet long, weighs a pound and a quarter, big enough to chain an ox with, and costs about nine hundred dollars.

(Written for the Mining and Scientific Press.)

Pueblo Silver District.

Messrs. Editors:—Having read in your issue of Oct. 29th an editorial about the Owyhee country, in which you stated some impressions which you derived from a conversation with Mr. W. M. Babb, in regard to the richness, prospects and future success of the Pueblo Mining District, I take the liberty to correct some of these statements, which corrections I think are warranted by facts which I have collected by personal observations.

You say, "These mines may probably become invaluable to the future for copper. The ore is *erubescite* and very rich, but the amount of silver is so small that they are practically valueless for the present." Mr. Babb, who spent the summer with Col. Drew's Oregon and Owyhee Expedition, passed through Pueblo on his way to Owyhee, and did not stop there with us but two days, which was not long enough to make a thorough test and practical examination of the hundred different ledges on the mountains. I rode in company with him down to the chloride series, at the south end of the mountain, where we were getting out rock for Weir's quartz mill, and he there examined the different series of ledges, which, I believe, were the only ledges he visited, except the Powell lode, located above the Trojan Spring and near the quartz mill. He took some fine specimens of ore from the Carolina series, Pueblo, Constellation and Godfrey series; but many other series of ledges where rich specimens are found he did not examine. A geologist thus hastily passing over so large a mineral district, fifteen miles long, could not, in so short a time, make a practical test, so as to form a very correct idea of the width of the mineral veins and the extent and richness of the district.

Having spent four months prospecting and examining Pueblo Mountain, I think I have had a better opportunity than Mr. Babb to form a correct opinion of these mines, and I can speak from actual knowledge concerning the style and richness of the ore, as I helped to get out and furnish the quartz mill with rock from the different series of ledges—the Pueblo and the chloride series.

The geological formation of Pueblo Mountain is a little remarkable—slate, limestone and granite seeming to form a confused mass, sometimes the one and again the other predominating. It extends continuously about fifteen miles. The crest is sharp and regular, and rises about five thousand feet above the plain. This is the most regular mountain in the formation I have ever seen. It has the appearance of having been upheaved, by some volcanic force, in front of another mountain. All the ledges and out-croppings of granite, limestone, slate and quartz, preserve a parallel course the whole length of the range, and pitch to the eastward. I am persuaded that, taking the mines here generally, they can be worked to better advantage, with much less expense, and with greater relative profit, than any mines found elsewhere, even if the facilities are not so good as in other districts. There are many rich mines in other districts which have only paid expenses of working from the commencement, owing to the large expenditures in thoroughly developing the mine, by sinking shafts, running tunnels, etc., to find the ledge. But this is not the case with Pueblo mines. They can be traced for miles by their out-croppings, and will pay for working from the top. Sufficient work has been done upon many of the ledges to set the matter entirely at rest, and every day's observation, while I was there, enables me to speak with some degree of certainty, and also serves to strengthen the conjecture in my mind that many of the ledges here will prove to be permanent, and become invaluable for copper.

On quite a number of these ledges considerable work has been done, and many tons of ore taken out, crushed and concentrated, and there is no doubt of its richness, when reduced to bullion. From some of the assays I made at Pueblo, I found some of the ores to vary from $25 to $500 per ton. Among the ledges I examined the following, which I judge to be the most promising: Pueblo series, Chloride, Coralinn, United States, Franklin, Zodiac, Constellation, Morning Bell and Godfrey series. The formation in which these ores occur are plutonic and metamorphic rock. These rocks, stretching along in belts from the base to the summit, are in many places interstratified with layers of micaceous schist, associated with quartz, magnesian, limestone, fluor spar and granite. In this district the general character of the ores differs in their combinations with minerals of other districts. Base metals are rarely found in these mines, which will render the rock easier to be worked and reduced to bullion. Argentiferous copper rock from the croppings is the base of these mines, or, more properly a belt of continuous copper veins, running in a northerly and southerly course, which can be traced by their out-cropping the whole length of the mountain. A majority of the ore thus far taken out is not erubescite; only small specimens are found of that mineral in Pueblo.

All copper ore is either sulphurets, oxyd or carbonates. Sulphurets of copper—the form in which the metal is most commonly found in California—is a dense mass of metallic crystals, of dark or light yellow color, according to its degree of richness, and losing its luster on exposure; whilst in Pueblo much of the ores contain black and gray oxyds, as well as native copper, in the form of wire, and has a pale, brassy color. Black oxyd abounds near the surface, and so far down as they have reached sulphurets predominate, and are of greenish tint, purple and blue color. The sulphurets obtained from the Pueblo series and the Godfrey series are the richest I have ever seen. A shaft has been sunk on the Chloride series, about ten feet, and from the surface to the bottom of the hole the rock is rich in gold, silver and copper, which assays $27 in silver, $185 in gold and $312 in copper to the ton, making a total of $524 to the ton, and as we descended the ledge is improving. The above statement is the assay receipt of the average working test of three tons of rock from the Chloride series, made last month, by a practical assayer in San Francisco.

This belt or zone of copper is grouped into clusters of well-defined and distinct ledges, lying in a true mineral formation, the mountain bearing a high metamorphic character, while in the vicinity of the veins porphyritic greenstone crops out near the summit, in bold relief, enclosing micaceous schist, with quartz as the mineral gangue. The minerals in these veins show extensively along the whole range or belt, with a width of from one to two hundred feet, the ore consisting of sulphurets, carbonates, oxyds and pyrites of silver and copper, though the sulphurets show a large per centage of silver in the Godfrey series, some assays being as high as from $500 to $1000 per ton, in silver, whilst the copper will average from thirty to forty per cent.

After a thorough examination in this vicinity, and the different assays made, I consider these mines, if properly worked, would be, at the present time, more remunerative than any other mines I have seen in this Territory, and I may safely add are as good, if not better, than any others yet discovered upon this continent.

Grove K. Godfrey.

Shasta, Nov. 5th, 1864.

The Wood Supply of Washoe.—The Virginia City *Union* has the following:

Firewood consists altogether of pine and cedar and is brought from Washoe Valley, and the surrounding hills. Nut pine wood brings $16 per cord, delivered, and $1 less is charged for cedar. The teams bring from two to seven cords at a load. Including a space of less than twelve miles square about Virginia, there are few if any places in creation of like size where as much wood is consumed. Many of our mills consume from six to ten cords per day, and the numberless engines used in hoisting works, saw and planing mills, and other purposes, use a proportionate quantity. Most of the wood that is consumed in the mills of Gold Cañon comes from Palmyra district and El Dorado Cañon, where the mountain slopes are plentifully covered with the nut pine, and from that section hundreds of cords are daily taken. In fact a constant stream of teams are on the road. It is the best wood in the territory to burn, and for stove wood it is hardly to be excelled anywhere in the world. The trees are all small, low and scrubby, yielding but little wood—only about a cord and a half or less to the tree; therefore, in a very few years we shall be short of that kind of fuel.

There is plenty of wood, however, on the Sierras, and in a few years a railroad will be bringing it to us in any quantity. One noticeable feature in the wood traffic is what we see every day on the streets, but to a stranger it has quite a novel and comical appearance, viz: Jackasses, with big lords of firewood on their backs, and driven by Chinamen. These domestic little animals (the donkeys) come in patiently from the hills every day with their load, and supply principally the Chinese quarter of the city. A couple of large iron hooks, on each side of the pack-saddle receive the wood, which is piled high above the donkey's head and secured with a rope. These little animals carry from one to two hundred pounds each of wood, and are found very useful in going into places and along steep declivities inaccessible to wagons.

The Times on Farragut's Victory.—The London *Times* of September 17th, in summing up the results of Admiral Farragut's victory, says:

We think the reader will admit that this is a most extraordinary battle, and, perhaps, the most wonderful part is the comparative impunity with which it appears that wooden ships can still engage an iron-clad. It is obvious to surmise that the result might have been different if the Tennessee had attacked her antagonists with shell instead of with rifle bolts, which merely cut clean holes through their sides; but it is also clear that "ramming" cannot be tried, as it was in Hampton Roads, if ships can only so move as to elude the ram. What destroyed the Congress and the Cumberland was that they were mere sailing vessels, and could not evade the shock, whereas Farragut's vessels, by aid of their screws, escaped fatal damage, and at last, being fourteen to one, actually bent their great antagonist at his own proper game. In fact, the Tennessee was literally hustled into surrender. Her crew were knocked off their feet every five minutes, and were no longer fit for fighting, though their ship was substantially uninjured. Finally, what are we to think either of Confederate plating or Federal guns, when such enormous pieces fail to produce any effect on armor at ranges measured, not by yards, but by feet or even inches? These are questions which will be asked with considerable interest, and the battle in Mobile Bay will, perhaps, add one more lesson to those which we have received from the American war.

Results of Calculation.—There are many persons who cannot, or will not, appreciate the harmony and beauty of natural laws, the reason being, we suppose, that they are incapable of following the calculations necessary for their elucidation, and thus, by avoiding all the trouble, the result brings no pleasure to them. Where can anything more beautiful be found, and in what fact can you find a greater demonstration of the harmony of the universe, than that the same law which governs the motion of the planets, also controls a falling stone? The same force which binds the rocks together also keeps in contact the particles of skin on our hands. The universe and all things in it obey a system or code of laws which cannot be broken. It may appear extraordinary when we state that there is nothing violent or irregular in nature! The upheaved rocks of former ages have all been unheaved gradually, and in obedience to a controlling power; even apparently capricious earthquakes always move and ever will progress in a definite and given path around the globe; and the eruption of a volcano can be calculated to a nicety. Storms can be prognosticated, hurricanes predicted, and a comet's appearance prophesied; all these wonders are the result of hard and dry figures, the consequence of great calculation. Who, in future, will not have a great respect for arithmetic?

Fishes Traveling by Land.—Dr. Hancock, in the "Zoological Journal," gives a description of a fish called the "flat head bassar," that travels to pools of water when that in which it has resided dries up. Bose also describes another variety, which is found in South Carolina, and, if our memory serves us well, in Texas, which, like the "flat head," leaves the drying pools in search of others. These fishes, filled with water, travel by night, one with a lizard-like motion, and the other by leaps. The South Carolina and Texas varieties are furnished with a membrance over the mouth, by which they are enabled to carry with them a supply of water, to keep their gills moist during their travel. Guided by some peculiar sense, they always travel in a straight line to the nearest water. They do without the aid of memory, for it has been found that if a tub filled with water is sunk in the ground near one of the pools which they inhabit, they will, when the pool dries up, move directly toward the tub. Surely this is a wonderful and merciful provision for the preservation of these kind of fish; for, inhabiting as they do, only stagnant pools, and that too, in countries subject to long and periodical droughts, their species would, but for this provision, become extinct.

The Ebb and Flow of Beauty.—Beauty makes its own fashions when it comes; and we must remember that it is not at once a beauty. People are continually being disappointed in children in this respect; cherubs grow up into ogres—mouths widen most portentously about fourteen years old; dimples about that time often vanish, and noses then can lengthen, or crook, or even snub; and it is fortunately the same the other way too—that faces ugly in the cradle may quite change by twenty. Some people's beauty comes very late indeed, and those who have been repugnant in their youth and maturity may look splendid in old age. Gray hairs and white beards become some folks wonderfully; a few wrinkles, also, greatly improve certain faces; and one old lady of our acquaintance we never dreamed was beautiful until we saw her in spectacles.—*Victoria Magazine.*

Mining Ideas in New York.

A New York correspondent of the Humboldt *Register*, writes to that paper as follows:

It is generally conceded here, and elsewhere that I have heard the subject spoken of, that the mines of Humboldt are not surpassed in richness and extent by any in the known world; yet your county languishes, and hundreds of men owning thousands of feet are compelled to leave, and also don the fruits of two or three years of prospecting, in search of a more remunerative field of labor—unable longer to make a bare subsistence in the land of sage brush. Whilst this is true of Humboldt, there are many less favored localities much further advanced in the progress of development. The reasons for this are chiefly: 1st, certain combinations of interested influences, at Virginia, and other localities, kept in use to disparage the Humboldt mines; and 2d, an unfortunate system of organization for working your ledges, which has obtained among yourselves at home. To overcome the first obstacle, will require a combined effort to collect and present to the public reliable statistics of the number, extent and richness of your mines. The great desideratum with you is, how to obtain capital for the development of your mines; and to do this, capital must be made to understand the situation. The second difficulty to which I allude is the system of organizing companies and issuing stock subject to assessment, and relying on the sale of such stock to open and develop your mine and put improvements thereon. The concurrent testimony of all experienced men with whom I have conversed on the subject, is, that while one mine might be successfully worked in that way, a hundred would fail—as it is utterly impossible to get capital from abroad to aid you whilst the holders of your mining stocks are liable to be sold out any day for delinquent assessments.

The plan adopted by the people of Colorado has been the salvation of their country—has made them prosperous in the extreme. Wherever a ledge has been found with reasonable prospects of being a paying mine, there has been no difficulty experienced in obtaining an abundance of capital to fully prove its quality and extent; but it is not done by incorporating in Colorado and issuing assessable stock, to be sold in a market where there is no capital.

The most approved plan, so far as my information on the subject goes, is: First, when a ledge is found showing reasonably fair prospects, the owners agree upon a certain amount of the claim—say one-half, if necessary, to be set apart as a working capital, to be put into the hands of the Trustees of the company when organized, to be sold from time to time as work progresses, to defray the expenses—leaving the remaining one-half unassessable. By this plan, as the work progresses, if the developments are satisfactory, the stock will improve in price before the whole is expended. The stock not set apart should not be issued until the Trustees could see their way clear for funds for operative purposes; this to prevent the stock from being huxtered in the market, to the injury of the stock held by the company, until the same is disposed of.

In support of the foregoing views, it will only be necessary to state the fact that assessable stocks in this market, though the mine may be rich as Crœsus, will not sell for a penny a foot—whilst unassessable stocks in Colorado and other places with no great recommendation, sell at fair prices. The reasons for this difference are obvious to one familiar with the condition of things here. There are tens of thousands of persons here, not professional stock dealers, who, having money to spare, would invest in good mines and take chances on their final success. The stock not being subject to assessments, they can lay it away and bide events; but if subject to assessments, the holder may be called upon at any time for further contributions, when he may be ill able to spare the funds—must constantly keep an agent near the company's place of business, or else his stock may be sold for assessments; and, finally, having no voice in the control of the company's affairs, he has no security against onerous assessments being levied for the purpose of "freezing out outsiders." These objections are removed by adopting the unassessable plan.

Sansum Copper Mine.—Mr. Phillips, who is in charge of the works at the Sansum Copper mine, came down last night. He reports that they have followed the vein of ore forty-eight feet down, and have got out several tons of ore containing from eighteen to twenty per cent. of copper. The quality of the ore is steadily improving, and Mr. Phillips thinks that fifty tons of twenty per cent. ore could be got out for shipment in a very short time. We hope the company will send a sample of their ore to England, as that will be the most effectual means of proving to home capitalists that our mineral resources offer remunerative fields for their investments.—*Victoria Colonist, 7th inst.*

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, Nov. 19th, 1864.

We have no important change to note in the condition of the money market. The demaud is fair for the season, and rates are ranging from 1½@2 ₱ cent. per mouth in bauk. Sau Francisco seems to be making rapid progress, and every material interest flourishing. Wealtb is accumulatiug, and money is becoming more abundant.

Receipts of bulliou from the iuterior during the week amonnt to $1,000,000.

Gold bars are selling at $830@840, and silver is ranging at 2 ₱ ceut. disconnt to 3 ₱ cent. premium.

Since Saturday last the share market has continued to exhibit the same characteristic features prevalent for a month past. Most leading stocks are steadily maintained, at current quotations, and a good deal of confidence is felt in their futnre. The average yield of all the claims on the Comstock so far during the month exceed that of a like period last month. Speculative shares have fluctuated materially, and for the most part were dealt in at declining rates.

Legal Tender Notes were sold to the extent of $46,700, within a range of 43c, seller 60 days, and 48c cash, closing at 47½c bid, 48c asked. Since the 15th inst., gold has declined at New York from 240 to 216.

Pacific Insurance Co. has met with sales at $116, at which rate 110 shares changed hands. This company is said to be doing a large and profitable business.

State Telegraph is higher, and was sold at 40. San Francisco Gas Co. declined to 80. Spring Valley Water Works is enquired for at 50 ₱ cent. on nmount paid in. California Steam Navigation is held at 77 ₱ cent ($770). and Califoruia State Bonds at 78.

Savage has not been dealt in during the week, and was offered yesterday at $1850. Thc main shaft in this mine has nttained a depth of 365 fect. Betwccn the second and third levels tbe distance is 50 feet, and betwecn the third and fourth, 95 feet, the former runniug north 200 feet to the Gould & Curry line, and containing 113 fect of good ore. The floor of the third level expands to 135 feet in length, about one-half of which has been taken out. For the past two months the mine has yielded some 30 tons of shipping ore, valued at $1,500 per ton, and about 10 tons daily of No. 1, valued at $200, and 150 tons daily, worth some $50. A drift from the bottom of the shaft extends 200 feet north, and from this a drift driven 80 feet to the west has penetrated a large body of fine ore, which is said to increase in metal as work advances. That portion of the mine lying between the third and fourth levels has, thus far, heen comparatively unexplored, but indications lead to the supposition that tlic chimney is widening at about the same ratio as in the levels above. The ore met with in the 80-ft. drift westward is said to be lying west of any ever yet found of equal richness in this claim.

Gould & Curry was less active than nsual, nntil yesterday. 21 feet have been sold, declining from $1,385@$1,390 to $1,360, then rallying to $1,400, and closing at about $1,475 bid, buyer 30 days. The yield of this claim for the current month is said to be ratber more encouraging than for some time past.

Chollar has been active, with little or no variation in pricc, and 32 feet were sold at from $990 to $1,000. The new hoisting aparatns of this company, will, it is thought, he in successful operation to-day. Some 150 tons of ore daily can now be readily taken from the mine which will give employment to an additional number of mills. The lode in tbe south mine coutinues to disclose good ore in length aud width, ns work progresses.

Yellow Jacket, declined from $967@$970, buyer 30, to about $900 cash and was held yesterday afternoon at $950, within which range 12 feet were sold. In sinking from the 280 feet level and in running north aud south the rich pay seam is said to be widening and otherwise improving.

Potosi is firmly held and 10 fect were sold at $800. A decision from his Honor, Judge Mesick, in the suits of this company with the Bajazet, is momentarily expected.

Crown Point is unchanged and has met with no sale during the week. At the close $700 was hid and $800 asked.

Belcher changed hands at $750 per foot and is now offered at $800. Empire Mill & Mining Company is in better favor, and five shares were sold at $550 per share. The company in this city, are in the receipt of regular shipments of bullion and these are fully up to the average of the past two months.

Hale & Norcross is in less request, opening at $850, receding to $510, rallying to $675, again declining to $510, then advancing to $565, seller 30, and selling yesterday at $520@$545, buycr 30. No less than 132 feet have changed hands at this range of prices. The ore found in the 500 feet level did not prove to be of much valne, but at a greater depth recent developments are thought to indicate the existence of a permanent lode of pay ore.

Opbir has been dull and inactive, dcclining from $475, buyer 30, to $425, and closing at $420, bid, and $425, asked. This Company are obtaining some good ore, abovc the scventh level.

Uncle Sam rose from $275 to $300; steadily declined to $200, and closed yesterday at nbout $200 bid, some 39 feet have been sold. Overman fell from $140 to $128, rallied to $140, and was held ycsterday at $135, within which range 31 feet were dealt in.

Bullion has been actively dealt in and 346 feet were sold, declining from $190 to $165, rallying to $185, receding to $160, rising to $170, buyer 30, and closing at $168. This mine adjoins the Chollar and Potosi on the south. At a depth of 500 feet a drift running north 100 feet met with ore similar to that found in the Chollar mine but work was suspended by the company until the title to the Corser ground could be obtained; this secured, activc operations have now been resumed. Recent developments show, it is said, very flattering prospects.

Burning Moscow still maintains its supremacy at the Board, and 3725 shares have changed hauds during the week, advancing from $47 to $72, receding to $58, sellcr 30, then selling at $70, again declining to $45, sellcr 20, aud $40, seller 60, then rising to $58, buyer 30, and closing yesterday at about $47½.

Nevada, J. G., has been in some demand and rose from $34 to $45, buyer's option, and closed at $44. Some 260 shares were sold.

Imperial was sold at from $148½ to $146@$145. Sierra Nevada was dealt in at $50, $45@$41, then rose to $45 bid. Antelope was sold at $80, and Real del Monte at $22.

Wide West declined from $20 to $14; Golden Age & Empire from $17 to $10; Bajazet from $26 to $23; Sheba from $55 to $40, and Daney from $25 to $22½.

Josephine, Copper, is in good demand at $45 bid—none offering.

The aggregate sales since Saturday last amount to $536,935 25.

FRANK LAWTON, Secretary.

Commissions on Mining Shares.

Sale at 1 dollar up to 10 dollars	$0 25 per foot
Sale at 10 dollars up to 25 dollars	50 per foot
Sale at 25 dollars up to 50 dollars	1 00 per foot
Sale at 50 dollars up to 100 dollars	1 50 per foot
Sale at 100 dollars up to 200 dollars	2 50 per foot
Sale at 200 dollars up to 400 dollars	5 00 per foot
Sale at 400 dollars up to 600 dollars	6 00 per foot
Sale at 600 dollars up to 800 dollars	7 50 per foot

From $800 to $3,000 per foot, one per cent, on the amount of purchase or sale.

Anything above $3,000 per foot, three-quarters of one per cent. on the amount of purchase or sale.

J. B. E. CAVALLIER, President.

Mechanical.

The Portland Boiler Works, Mission street, between Fremont and Beale streets, have in their works a new punching machine, which is said to be superior to any other punch in the city. The owners have got up this machine at a great expense, and are well satisfied, as it gives general satisfaction. It will punch a hole six inches in diameter, and can be regulated so as to punch all the smaller holes required in boiler-making. It punches the tube holes through a sheet of boiler plate ½-inch thick, and requires but very little labor—one man can work the machine. Messrs. Moynihan & Aitkin have a very superior set of tools on hand, and can now do all branches of boiler-making with dispatch.

A Small Invention with Great Results.—The science of saving waste is one of the most useful in the world. Whoever invents anything that tends to save waste, is a world's benefactor. M. Pinner of this city is such a man. He has invented a plan for soldering up tin cans, used to preserve fruit, etc., that saves cutting open the cans, and thus saves them for use again. It is done thus: A small wire is laid under the cap to be soldered over the hole, through which the case is filled, just within the edge to be soldered. One end is left protruding, so that it can be wound around a key, and by continuing to turn it, the cap is ripped off almost as fast as one could tear paper, and the can is left entire and fit for use again. We showed it to an old campaigner, who has been where the trail of the army was marked by wasted cans, and seen sundry pocket-knives broken in trying to cut open the stubborn tin, and he at once exclaimed, "What a grand Yankee invention. Small as it is, it will have great results." Upon explaining that it was a French and not a Yankee man who made the invention, our friend replied "that it was at least worthy of a Yankee paternity, as it was simple, economical and useful." So think we, and so commend it to "all whom it may concern."—*N. Y. Tribune.*

Mr. Fowler, of steam-plow celebrity, has just patented a horse shoe. In this invention the important object, it is said, has been obtained, of introducing a spring under the horse's foot in such a manner as to lessen the blow so fatal to the soundness of horses which have to travel over hard stones instead of their natural pathway—the turf. If any elastic material is introduced between an ordinary shoe and the hoof the rebound of the spring tears the shoe from the foot. To obviate this difficulty, Mr. Fowler uses a double shoe, and places the elastic between them. The second shoe is connected with the foot by means of rivets, which hold it firmly, but allow the necessary, movement for the spring to act.

An ingenious method for throwing a rope to a ship in distress has been imagined by M. Bertinelli, of Turin. It is well known that this is generally done by means of iron projectiles, which sink below the water if the rope they carry be too short. M. Bertinelli's projectile is made of wood, which, though heavy enough to be shot to a great distance, is sufficiently light to float on the water, thus giving the crew in danger an opportunity of reaching it by some means or other if it should happen to fall short.

The entire railway business of France is done by six companies; the largest of which is the Paris, Lyons and Mediterranean, whose length, including trunk line and branches, is 3,609 miles at an estimated cost of $251,000,000. The working expenses for 1862 were some forty-four per cent, of the gross receipts. The dividend paid was fifteen per cent., and a dividend of fifteen per cent, has just been declared from the profits of 1863.

A Weatherometer.—A new invention, calculated to supplant the barometer, is called the aelloscape. Aelloscopy is that branch of meterology which is concerned with storms, and might be called storm-forseeing, or storm-prognosticology, and this instrument is called an aelloscope, because it is so constructed that it never fails to give timely warning of the approach of a storm.

The Lowell Machine Shop Company is fitting up the machinery for a new cotton mill, at Sinaloa, on the San Lorenzo river, near the Gulf of California, in the west of Mexico. The mill will contain 1,280 spindles and thirty-two looms. The cotton is raised on plantations in the neighborhood.

Fastenings of Armor Plates.—In the recent experiments at Shewburyness, Eng., it was found that armor plates fastened to ships' sides by large wooden screws hold much better than those secured through bolts and nuts.

Mining Reports.

REPORT
Of the Daniel Webster G. & S. M. Company.

To the President and Directors of the Daniel Webster G. & S. M. Company, Devil's Gate District, State of Nevada.

Gentlemen:—In compliance with your request, I left San Francisco, on Monday, the 10th, of October, 1864, for the Devil's Gate mining district, State of Nevada, and proceeded to make an examination of the mine and works of the Daniel Webster Company.

The following report which I now submit you, is the result of my observation thereon, and which I have made as concise as possible without omitting any detail entitled to notice.

The Daniel Webster Company's claim is located about eighty chains to the south of the City of Gold Hill, and from Virginia City (where mineral resources are acknowledged to be exceedingly great) about one hundred chains to the south west, as indicated upon the plan herewith presented. The geological features which here prevail, are somewhat similar to those of Virginia and Gold Hill, with perhaps a more abundant exhibit of micaceous slate on the surface, which is at once a most promising indication, as it is also the most congenial to the existence of gold. The gold bearing rock is chiefly a talcose slate, that is a slate resembling soap stone, but which does not feel as greasy. This slate is red and ferruginous at the surface, at a greater depth it is filled with small crystals of iron pyrites, which are decomposed near the surface and appear as peroxide of iron, which colors the slate brown, and in a few instances, yellow. It is of various grades of hardness in those places where the ground or rock has been exposed to more heat than elsewhere. It is a metamorphic rock and runs in regular belts, which is a stratification known to be most productive of the precious metals, indeed, it is the proper matrix for gold, and wherever this metal is to be found in great abundance it will be in such formations.

After my first examination of the stratification and outcrop of this lode at the surface, I turned my attention to the underground sections. The tunnel has been driven two hundred and seventy-five feet, with the design to intersect two lodes, viz: a "blind ledge," marked No. 1, on diagram, and the Daniel Webster. The first mentioned lode is chiefly of decomposed quartz in which iron pyrites are abundant and is of the undoubted value of sixty to seventy dollars per ton, in gold and silver.

The lode of the Daniel Webster, intersected by the same tunnel at a depth of one hundred and forty-five feet below the surface, as shown in the plan, is from eight to ten feet wide, principally composed of quartz and iron pyrites, as also small portions of talcose slate. The vein here, for thirty-five feet in length to the south, is worth from forty-five to fifty dollars per ton. This of course is only an approximation, as I had no means whereby to actually test its richness. I, however, estimate its value thus, with all confidence, certain that if an actual test were made my estimate would be found on the safe side. The lode in the south end has been opened thirty-seven (37) feet, from its intersection by the tunnel. It is from four to five feet wide throughout and with a most promising appearance, and I would most unhesitatingly recommend you to prosecute work on this section of your mine with all diligence, confident that the operation will be a paying one and highly remunerative to the company.

The north end is driven about fifteen (15) feet from the cross cut, and at this point the vein is fully ten (10) feet wide, and is equally as rich as that of the south extension, some samples of which I have left at the office of the Secretary for examination. I shall also recommend you to drive this level, as I am satisfied that it will intersect the cross course or dyke which is running east and west and cutting through each lode as it penetrates so far as can be seen, and it is seldom if ever that a lode or vein thus interseeted has been found without valuable deposits of metal; this is a fact well known to all practical men. I should also remark that a careful examination of the western walls shows that there is yet a portion of the lode undeveloped, and which would certainly be found on driving a further eight or ten feet, and it is my opinion that you will find the best and most productive portion of your lode resting on this wall. It is also worthy of mention that from the adit level there is about one hundred and forty-five feet of the lode which will at once furnish perhaps from seven to ten thousand tons of quartz of great richness as will be noticed hereafter. I also find that you have a shaft sunk below the adit level to a depth of forty six feet. The lode in this shaft will average eight feet wide, and I should remark that here also the western wall has not yet been reached. As to the productiveness of this lode, I should consider it quite as good as any other portion of the mine. There is also a level driven at the bottom of this shaft forty feet to the south; the lode in this distance, is not so large as that on the level above, and it is, in my opinion, only a branch or scam from the main lode. This I discovered by a careful examination, having tested the bearings instrumentally and by exact measurement. I find that the true lode is about seven (7) feet farther to the west, and which, of course, you will have to cross cut for.

The character of the vein, which has been driven for at the bottom level, has a very favorable appearance for silver much more so than for gold. I shall recommend you to continue this shaft until the water necessary for your works has been obtained, as there cannot be a doubt but that by so doing, you will meet with profitable results, you will then prosecute the development of your vein both north and south and work from the level instead of the bottom, which is the proper manner and which can be done at one half of the expense.

There is now exposed and easily accessible, in the various shafts and levels of the "Daniel Webster" a large quantity of ore, say as follows: one hundred and forty-four fathoms in the mine proper that will yield according to estimate quite as much as ten tons to the fathom, which will be—say, fourteen hundred and forty tons. In the bottom of the adit level there is by admeasurement some fifty-six fathoms, which at the same rate, would equal five thousand six hundred tons, making a total of upwards of seven thousand tons which can be made almost immediately available.

In conclusion after a careful examination of the various mines in the vicinity of Virginia City, Gold Hill and Silver City, I have no hesitation in affirming that the "Daniel Webster" Company possess a claim which in extent and richness is second to none. That by judicious management it may be made highly remunerative at an early day; is to my mind a settled fact. I will however take the liberty to direct your attention to what is all important if not an absolute necessity, in mining profitably, it is this: That the work should be superintended by a thoroughly competent person whose scientific knowledge and practical experience, will insure at once economy in the working and returns that will truly test the capacity of the mine. Were the sugestions contained in this report duly carried out it is beyond a conjecture that the "Daniel Webster" would soon furnish its shareholders with gratifying dividends.

There is everything to justify the company in pushing on their works with great vigor. The property is an extensive one, its richness and value cannot be questioned and it is now in a fair way to produce returns as an investment. In short in all my experience, and it has been a long one as a mining engineer and metallurgist, I have met with but few mines that presented a more favorable aspect than the "Daniel Webster." It requires but one thing, a fully competent manager to make it one of the best properties in Nevada. Your ob't. serv't.

Wm. Burgoyne,
Mining Engineer.

San Francisco, Oct. 20th, 1864.

REPORT
Of the Daniel Webster G. & S. M. Company.

Devil's Gate District, Nevada,
November 13th, 1864.

To the Secretary of the Daniel Webster G. & S. M. Co.

Dear Sir:—Herewith I beg to hand you a report of my operations since the re-commencement of work upon the "Daniel Webster." The short period I have been in charge, coupled with the necessary difficulties in getting all matters and things into good working order, will be obvious to you and account for the brevity of my remarks. I am happy to say however, that although my remarks are brief, they will furnish some evidences of progress, nor have I anything to say but what is of a favorable nature.

Upon the No. 1 lode, as it is classified in my previous report, I have had two men engaged in rising on the back and extending the level north and south. The lode or vein at this point is about two feet wide, and is producing very rich gold ore, I should say worth from one hundred to one hundred and twenty-five dollars per ton, and the entire cost and charges for obtaining this ore will not exceed twelve dollars per ton. It is hardly necessary for one to say what a valuable property the possession of a lode of this description is to any mining company.

On lode No. 2, "the Daniel Webster," we have been driving north on the course of the lode. The vein in this northerly extension has much improved in appearance both for gold and silver, more so for the latter, and judging from the stratification of the ground, I should say that it will still further very materially improve. The lode here is about six feet wide, principally composed of quartz, feldspar and sulphurets of iron, accompanied with the most congenial pockets for silver sulphates. I have only had two men employed on the end but on Monday next, the 14th inst., I shall put on two more, which will keep the work in progress both night and day.

It will be necessary for me to particularize the different sections of the mine upon which I have commenced developments. I commenced stopeing or taking out in the bottom of the adit level at the point of intersection with the tunnel. During the last fortnight we have stoped or taken out on the western part of the lode, eighteen (18) feet in length, by about twelve feet in depth, from the end of the shaft sunk below the level. The lode in this stope is about three feet wide, yielding remarkably rich gold and silver ore. I should remark that this is only a branch of the main lode, by stopeing along which we uncover the main lode, which I shall commence taking down next week. The horse or stratum which separates these two lodes is not more than three feet wide, which will enable us to work very conveniently and give us ample access to both lodes. I have also had men working in the back of this level on the main lode of the Daniel Webster, but not having a sufficient number of hands at work, I deemed it advisable to stop operations at this point until I could secure practical miners, adapted to this peculiar work, which I am happy to say, I now have. The lode in this rise presents a very flattering appearance, and I consider it to be only a question of time, and very brief time at that, when we shall be able to realize therefrom very handsome returns. I have not had any work done in the south end at this level, having merely cleaned out the section and made preparations to begin driving next week, when judging from the characteristic stratification, and the general aspect of the lode, we shall have without doubt a productive grade of ore from this point. It is my present intention to push on the north end to the intersection of the cross course as quickly as possible, as therein I am satisfied we will obtain very rich deposits of gold and silver, we shall also be able to extend our adit or cross cut to intersect the various lodes belonging to this company, at less than one half the cost it could be done for by driving in any other manner.

Before I conclude my report, I have much satisfaction in saying that we have now on the surface, a great many tons of ore selected and prepared for crushing, and I have been occupied in making arrangements to rent a mill for the purpose of crushing this rock, which arrangement I hope to conclude during the ensuing week. We have many thousand tons of ore in this mine, that would yield handsome profits if the company had mill power and other requisites for the work, but which would not pay at the exhorbitant charges for crushing here. I am therefore obliged to select the richest portions, and reject the remainder for the present, or until we have a mill of our own. I am pleased to be able to say, however, notwithstanding these difficulties, that the mine, in its present condition, will prove a good investment, and that its ultimate return of profits will be unparalled in the history of mining on this coast. I have no hesitation in saying that during my long experience as a mining agent and metallurgist, covering a period of about twenty five years, I have never met with a more favorable prospect for any company than the shareholders of the Daniel Webster now enjoy. I have the honor to be your ob't servant.

Wm. Burgoyne,
Mining Engineer & Metallurgist.

The foregoing are true copies of the Superintendents reports, on file in the office of the Company, 512 Sansome Street.

Alex. Stott, Secretary.

Nature provides for the distribution of oysters in a very curious manner. Oyster spawn is at first light, and is easily carried from the parent oyster by the tide. Gradually the spawn rises to the surface, and the instant it is exposed to the atmosphere its specific gravity is apparently increased, for it suddenly sinks, and whatever solid substance it first touches in its descent to the bottom it makes its home, whence it seeks nourishment, and commences growing to maturity.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must and receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventions can secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

San Francisco:
Saturday Morning, Nov. 19, 1864.

WAR AND PROGRESS.

The continued existence and burthens of the present gigantic war, do not appear to materially interfere with the industrial progress of the loyal portion of the country, either in the mechanic arts or agriculture. Our commerce has suffered severely, however, in consequence of the presence upon the seas of a fleet of rebel cruisers, which, in this age of steam, it is impossible to destroy by the most vigilant ocean police within the reach of any nation. The records of the Patent Office afford the most abundant evidence of the present progress of invention, while the reports of the Commissioner of Agriculture show that, with a trifling discount in one or two particulars, we are constantly increasing the agricultural productions, notwithstanding the immense drain of the war upon our laboring population. The Commissioner of Patents, who, from his peculiar field of observation, must be accepted as the best attainable authority, says :—"The war, instead of checking, has stimulated our creative power in every branch of industry." The record of the material productions of the loyal States would be almost incredible, under our present embarrassed condition, were not the results demonstrated by the most incontrovertible facts.

The sword has not yet superceded the plough-share and praning-hook, inasmuch as in 1863, although we have recorded patents for two hundred and forty different war implements, we have in the same time brought out no less than four hundred and ninety inventions of agricultural implements. During the same time the whole range of mechanical industry has received numerous accessions in the simplification of labor—the genius of our inventors having been directed by the peculiar wants and necessities of the times.

For instance, the scarcity of cotton in the loyal States has attracted attention to the preparation of fibre from flax and hemp. Several patents have been issued for machinery designed to produce from these products a material to be used as a substitute for cotton which can be spun upon ordinary cotton-spinning machinery. The efforts in this direction, though not yet fully successful, show progress and promise ultimate results of great value. The scarcity of paper material has set our inventors to work to procure paper pulp from wood, reeds, straw, etc., in which they have attained most important success.

The wonderful developments of the petroleum business have opened a new, extensive and still increasing field of industry. The inventions in this department, in the way of stills, condensers, lamps, etc., are very numerous. The demands for the different products of petroleum are constantly increasing, and the large commerce growing out of it gives employment to a great number in the manufacture of tanks, barrels, etc., and in the large amount of transportation required. A vast amount of ingenuity has been expended in efforts to produce oil-tight casks for holding this fluid. No less than fourteen patents have been taken out for this purpose, and as many more for tanks and cans.

The deficiency in the Southern sugar crop, by reason of the war, has led to many experiments and numerous inventions in apparatus for evaporating the juice of the Chinese sugar cane, or sorghum. This business has already been brought to a very great degree of perfection, and the attention of inventors is now being directed to the making of sugar from the syrup. The indications are that this new sugar plant will soon, under the present stimulus, become as profitable for the manufacture of sugar as it already is for that of syrup.

In the department of agriculture, the continued and increased production of the loyal States is almost incredible under the circumstances. In order to afford some idea of the magnitude and almost universal increase of crops, we subjoin the following figures, derived from an authentic source :—

PRODUCTIONS.	1863.	1864.
Wheat, bushels	138,000,000	191,000,000
Oats	152,109,000	174,888,000
Rye	18,792,000	20,798,000
Barley	15,433,000	16,570,000
Corn	547,029,000	452,446,000
Potatoes	107,357,000	101,457,000
Tobacco, lbs	220,343,000	267,302,000
Hay, tons	19,073,000	29,000,000
Wool, lbs	56 183,000	75,405,000

It will be seen from the above that only two items—corn and potatoes—show any decrease, and that but a slight one. It should also be taken into account that the season of 1859 was a very favorable one, while that of 1863 was the reverse.

It must be apparent from the above that war does not stop the progress of invention in the loyal States, and exerts but slight interference with the pursuit of agriculture. War, with us, seems to call forth increased industrial energy, and merely turns our inventive genius into such new channels as the exigency of the times seem to demand. An invulnerable vessel is needed, and an Ericsson is found to produce it just at the critical moment it is wanted. A new and monster class of artillery is needed to destroy the formidable ironclads of our enemy, and a Rodman is found who is able to astonish the world with the production of a cannon of a weight and calibre heretofore considered far beyond the reach of human ingenuity. Improved small arms are wanted, and they are produced with all the facility of works in fairy tales. Our farmers are called from the peaceful walks of agriculture to mingle in the deadly strife of the battle-field, and our mechanics immediately set their ingenuity to work to invent agricultural implements to supply the deficiency of labor thus produced. Inventions in this direction have formed quite a feature in the Patent Office during the past two years, and have contributed largely to the favorable exhibit which is made above of this leading branch of industry. Necessity leads to invention, and as necessities occur or are created, they are constantly met by our people with corresponding inventions. With Americans, the genius of invention has only to wave her magic wand, and the "*open sesame*" is found which supplies all our wants. The history of the past four years has most abundantly proved the wisdom of our Government in giving aid to inventors, for that class of our population has most emphatically proved itself—in war as well as peace—the prompt supplier of our country's needs and the conservator of the nation's honor. Hence it is that we have astonished the world alike with the vigor of our early growth and with the energy with which we have carried on, for four years, the most gigantic war in history, without any material diminution in the progress of our people in arts, agriculture, or population.

THE steamers Golden Age, of the Pacific Mail Company's line, and the America, of the Opposition line, sailed on Monday—the former for Panama and the latter for San Juan del Sur, both carrying a large number of passengers. The amount of treasure shipped per Golden Age is $1,067,454.78; of which $685,576.24 goes to England, $376,878.54 to New York, and $5,000 to Panama. The rates of fare by the steamer Golden Age were : Chief cabin, $213 and $135; second cabin, $70; steerage, $48, exclusive of the stamp duty.

HOME FINANCES.

The money market has exhibited rather more activity during the week, and a good demand has prevailed in some quarters. Country remittances have not come forward of late with much regularity, and we hear no little complaint of the inability of interior dealers to meet their engagements in this city. Country credits have, however, during the current year, been more restricted than formerly, and we do not think it likely that much inconvenience will arise from any tardiness in that direction at this time, for the reason that the indebtedness of these country merchants to San Francisco must necessarily be insignificant. Our merchants generally are doing well and have maintained throughout the year a credit equal to that of any other class in the community.

Some important transactions have taken place, within the past few days, in real estate, and this interest is evidently attracting more attention from capitalists and others, both as a collateral security for loans and for purposes of investment. The growth of San Francisco, its increasing wealth and population, are clearly apparent to every one, and its future will probably be no less brilliant, than are its prospects now. A large amount of capital was recently transferred to this city by Eastern parties, and on last steamer day, because of this large balance in New York at the credit of San Francisco and subject to draft, the demand for bullion for the present was much lighter than usual and exchange was also ½ ℔ cent. lower.

Telegraphic Transfers were sold at 4½@5 ℔ cent premium, and drafts payable in coin at 2½@3 ℔ cent premium. At these rates but a small profit, if any, can accrue to the shipper of bullion. More than $500,000 in bullion, were shipped to China this week, and Oriental markets henceforth, are likely to absorb a good deal of our treasure in this way. Receipts from the interior since Friday last amount to some $1,200,000. Gold bars are plentiful and are offered at 835@840. Silver ranges from 2 ℔ cent discount to 3 ℔ cent premium. Legal tender notes have been comparatively steady at 45@46 ℔ cent with a fair demand.

Latest telegraphic advices from the East quote gold in New York at about 245.

CALIFORNIA.

LOS ANGELES ITEMS.—We clip the following items from the Los Angeles *Star* :—

Quite a large number of miners arrived by the last steamer, who are destined for the several mining districts on the Colorado. Mr. Ryland, Superintendent of the Planet Mining Company, Williams Fork, also arrived, who will go forward immediately and prosecute the thorough work already in progress upon the Planet, one of the richest copper mines on the Pacific coast. A large shipment of ore from the mine above named has been received in San Francisco, which brought an advancement of over $100 per ton; still another shipment of ore is probably on the way to market, with a third shipment accumulating at the Planet landing, from which it is short of twelve miles, by an excellent road, to the mine. The Planet is a reality, and will soon pay as well as the best mine on the coast.

A letter from the Colorado gives encouraging accounts of matters and things along the river, and the mining region of Arizona. The steamers are constantly plying on the river, transporting machinery for the mines, and goods for the merchants. Since the establishment of the opposition line of steamers on the river the imposition so long practised on the people has been done away with. Mining companies are busy opening up and developing their lodes.

A private letter from Williamsport, Eureka District, Arizona Territory, bearing date in the early part of the present month, states that the steamer Nina Tilden, in command of Capt. Gorman, had arrived at that point, and that the steamer Mojave was but a short distance below; the steamer Esmeralda was reported above. It was expected that each of the steamers named would take down a considerable shipment of ore, as large quantities of it had been placed upon the bank of the river, at the various steamboat landings, during the past few months.

CATALINA ISLAND.—The *Star* learns by late arrivals from the locality above named that the work of mining is progressing rapidly; a large number of lodes are being opened. Paying ore is being taken out of the Yellow Jacket and Ne Plus Ultra in large quantities. The *Star* of November 1st says that Mr. J. Moss arrived there last week, bringing with him a quantity of rich ore from the Moss lode.

NEVADA.

THE Virginia *Union* is informed that the Hale & Norcross mine, on the Comstock ledge, at the 500 feet level, and also at the 550 feet level, have just struck some very rich ore, much richer than ever before. How large the body of it is, they have not as yet ascertained, but it is known to be extensive. Preparations are being made for working it on a large scale. In the Challar mine they are reported to have struck it richer than ever in the lower level. The ore is said to be similar to the richest from the Mexican or Ophir.

GOULD & CURRY—MORE IMPROVEMENTS.—We are all of us either directly or indirectly interested in the success of the famous Gould & Curry mine, because it is regarded more than any other as the representative one of Washoe, if not of the Pacific Coast. It is here to mining stocks what the Bank of England is to the currency of the British Kingdom. The Gould & Curry would seem to be slowly, but surely, regaining its former market value, and work thereon is being conducted with an increased vigor. The new, or D street shaft, through which it is designed to hereafter take all the ore, is now down to the level of the lower tunnel, or two hundred and twenty five feet. Mr. Robert G. Carlyle, Chief Engineer of the Company, (and, by the way, a nephew of the great Thomas Carlyle,) is now in this city, for the purpose of procuring the hoisting machinery necessary for the newly made shaft. This machinery will consist of an eighteen-inch bore and three feet stroke engine, boilers, reels, a twelve-inch pump, hoisting apparatus, etc. Already the contract for boilers has been given to the Vulcan Foundry. When this D street tunnel will have been put in operation, we may look for another and permanent advance in Gould & Curry.—*Call.*

THE COMO MINING DISTRICT, NEVADA.—The VIRGINIA CITY *Union* of the 9th November says :—

The irrepressible citizens of that little town, Como, are determined on developing some of their ledges, even if the times are hard, and have never ceased operations altogether, although many of the claims had to be allowed to rest for the present. The Dayton Company, on the Montgomery ledge, have their shaft down to the depth of 150 feet and have a well defined solid ledge twenty feet thick, of a very superior quality of quartz, which assays very well indeed. They are about having a large lot of it tested by the milliag process, and from the assays, it is expected to yield about $30 to the ton. The Comet Company, on the old Goliah ledge, have their new double shaft down to the depth of fifty feet, and are now engaged in timbering it in a thorough manner from top to bottom. The Lancaster Company, next adjoining the Lyon Company, on the Walker ledge, at the depth of about thirty feet have a fine solid ledge about twenty feet in width, of the best looking quartz in the district. They sent a lot of the ore to San Francisco a short time since, which was tested by regular milling process, yielding $33 in silver and $27 in gold to the ton. The stock is mostly held in San Francisco. Next south of the Lancaster is the famous Montezuma, one of the finest ledges in the district, but which is now lying still for lack of funds to carry on the work. The rock from this claim has always been rich, and the company expect soon to be able to recommence sinking their big shaft, which is now seventy-eight feet deep. The mines about Como, are really good, and will create a big excitement *bye-and-bye*.

REESE RIVER.

MACHINERY FOR REESE RIVER.—It speaks well for the Reese River mines that the mills there appear to be fully employed, and that several are making arrangements to increase their capacity by the addition of new machinery. Additional machinery for the Union mill at Austin has recently been sent over the mountains from the Union foundry in this city.

THE Humboldt *Register* says that the sales were light last month, but foot up $900, against $300 expenses—which is better than paying assessments.

METHOD OF DETECTING DECAY IN TIMBER.—We learn from the *Cosmos* that a simple method has been adopted in the shipyards of Venice, from time immemorial, for testing the soundness of the timber. A person applies his ear to the middle of one of the ends of the timber, while another strikes upon the opposite end. If the wood is sound and of good quality, the blow is very distinctly heard, however long the beam may be. If the wood was disaggregated by decay or otherwise, the sound would be for the most part destroyed.

MELANCHOLY DEATH OF A LOVER OF SCIENCE.

We are paiued to recurd the suddcn and melancholy death of our esteemed friend and most valued correspondent, Edward A. Miles, Esq., of Sacramento. Mr. Miles was a young gentleman of rare promise, and most ardently devoted to tbe cause of science. Though never having enjoyed the opportnuities of a liberal education, he had nevertheless stored his mind with an amount of practical information in relation to the natural sciences and mechanics, which, at the early age of twenty-eight, was already introducing him prominently to the scientific world, as a profonnd and original thinker and a ready and able writer. He was most emphatically a self made man and the ability and amount of originality displayed in his correspondencc with various scieutific publications, fully attested to the earnestness and fidelity with which he has pursued bis work of self-education. He has been suddenly cut off in the prime of life and at the very threshold of his usefulness.

Mr. Miles was a noble hearted yonng man, modest and unobtrusive in his manners, and respected and beloved by all those who knew him best. Sincere in his friendships, he was also most earnest and houest in his opinions. Whatever emanated from his pcn bore most unmistakable evidence of this latter trait in his character. His correspondence with this journal is fully alluded to below, in the extract which we give from one of our city cotemporarics. At the time of bis death he wns engaged in the preparation of an important scientific paper, which wae to have appeared in a few weeks, in a series of numbers, in the Mining and Scientific Press. Mr. Miles was a single man, and leaves no relatives on this coast. He was boru in Lansinghurg, Rensselær county, N. Y. His father's name is William H. Miles, the pioneer manufacturer of a superior quality of hrusbes. Himself and son are now still partners in the firm, at 117 John street, N. Y., their residence being in Brooklyn. Besides these tbe deceased leaves a mother, tuo hrothers and several sisters, who will feel keenly the hitter hlast which must hreak so suddenly upon their social and kindred circle, when the news of his melancholy death shall reach them. The funeral of the deceased was respectfully attended at Sacramento on the 17th, and his remains now rest in the City Cemetery, in a lot purchased hy the kindness of his frieud, Mr. H. T. Holmes.

The circumstauces of Mr. Miles' death, and of the two mcn who perished by the same accident, are furnished us by Mr. Holmes, who, in response to a telegraphic dispatch, immediately repaired to the scene of disaster, and remained until the corpse could be obtained. Mr. Miles left Sacramento on Sunday morniug, the 13th inst., on the cars for Newcastle, from which place he went to the Alabaster cave, six miles distant, arriving at 11½ o'clock A. M., his object being to explore the Home copper mine, in the immediate vicinity nf the cave. The only shaft by which this mine is worked is about two hundred and seventy-five feet deep. It runs a small portion of the distance perpendicularly, hut further down inclines with the angle of the ledge. It is supplied with ladders which run the entire depth. It has been worked day and night. The workmen had left it at 4 o'clock on the morning previous to the visit. Mr. Miles in company with one of the workmen named Davidson went into the shaft, going down the ladder. Over the mouth of the shaft stood a frame building. Some time after Miles and Davidson had gone down the shaft this building was discovered by those who resided in the vicinity to be on fire. It was supposed that one of them, in lighting candles to take down, had thrown down a lighted math, from which the fire originated. Great alarm was at once experienced for the safety of the two men. No means were available for extinguishing the fire, and nothing could he done until the timbers were consumed. Not until nearly midnight could any effort be made to enter the shaft. At that time the foreman, Henry Alby, and a workman named Stein, started down. Alby had a rope tied around his waist, by which, in case of necessity, he could be drawn up. He went ahead and Stein followed. When he hae attained a depth of about fifty feet he told Stein to go back that he could not breathe where he was, and gave the necessary signal and was drawn up. Alby was found to be greatly exhausted, hut soon revived. In a short time Stein resolved to make another attempt to go down, saying that Miles and Davidson were probably suffering for want of assistance, and that he believed he could save them. His friends urged him to tie a rope around his waist, by means of which he could be drawn up, if necessary, but he refused to comply. Starting down without taking that precaution, he was followed by a fellow workman named Smith. When sixty feet deep Stein told Smith to go back, and added that he must have some assistance to get up. Smith hastened down to him, but before getting within arm's length of him Stein dropped from the ladder and fell down the shaft. The sound of his body striking on the sides of the shaft could be heard until it reached the bottom.

After the occurrence of this terrible incident all further efforts to descend were suspended, until the next morning. At that time a Cornishman, named McGruger resolved to enter the shaft. Having fasteued a rope around his body, he descended by the ladder about two hundred feet. At that point the men above discovered that his weight rested on the rope and the rope was drawn up as rapidly as possible. McGruger was found to be entirely unconscious and nearly dead. He had almost suffocated for want of breath, and had been, to some extent, injured in being drawn rapidly up the shaft. No further effort was made to descend that day. On Tuesday morning, Smith and Alby again determined to descend. At a depth of 163 feet from the surface a drift had been started from the shaft, running some thirty feet in distance. In this drift Alby found the dead hodies of Miles and Davidson. They had evidently attempted to escape on discovering the building overhead to be on fire, and after ascending a portion of the distance, had sought refuge in the drift. Both hodies were lying upon the floor of the drift, with their faces down.

As early as possible on Sunday evening a large canvass hose was introduced into the shaft, extending to near the bottom, and by means of a large pair of bellows, fresh air was forced down. This work was kept up steadily, day and night, by the volunteer labor of some fifty or sixty men, who had assembled from the vicinity. Smith and Alby were nearly exhausted when they came up, but they managed to introduce the hose into the tunnel beyond the location of the two bodies. After pumping down a large quantity of fresh air, one of them descended again, and the bodies were brought up.

The remains of the noble and self-sacrificing Stein had not been recovered when Mr. Holmes left the mine, they having probably lodged upon the debris lower down in the shaft. The death of the parties was probably caused by the entrance of noxious gasses into the shaft, in consequence of the rarefaction of the air by the fire at its mouth. We subjoin the following tribute to the memory of Mr. Miles, from the *Daily Flag* of the 17th inst., published in this city.

Thus perished a really brilliant young intellect. Thus perished Edward A. Miles, a young man who, had his life been spared, was bound to make his mark on the history of this great mineral country. From his facile pen emanated those really valuable articles on the mineralogy and geology of the State, which have appeared from time to time in the columns of that interesting paper, the *Mining and Scientific Press*. It was by his pen that many a humbug under the grab of a man of science has been exposed. Whoever may have read the articles in that paper over the *nom de plume* of "Pundit," cannot have failed to have observed that they were written by a master mind. They were written by Edward A. Miles, whose body now lies at the bottom of the fatal shaft in which he died, because as yet, it is impossible for human being to bring it up for Christian burial. Great as is the loss such a calamity causes to society, how much greater must the loss be felt, in that home, where a loving father, mother and sisters, are thus summarily and unexpectedly deprived of a son and brother, for whom so bright a future appeared in store. The unfortunate gentleman was a native of New York, and though twenty-eight years of age, had built up a reputation for himself, that might be envied by men old enough to be his grandfather. He was for some time employed as Superintendent on the great levee, near Sacramento. Recently he had devoted most of his time and talents, in elucidating the problem of the age, and origin of the mineral veins of this coast, a number of valuable articles on which subject he has already published in the *Mining and Scientific Press*, when death in his most hideous form thus terminated his brief, though bright career of usefulness. Mr. Miles was the author of the article which exposed the fallacy of the theory advanced by Professor Silliman, that the silver ores of the Reese River district had been converted from sulphurets and sulphides to chlorides, by the action of superheated salt water.

The Shareholders' Directory.—Every stockholder who holds mining stock liable to assessment should be careful to peruse, each week, our carefully compiled list (of all companies now advertised in San Francisco), which will be found in another part of this paper. This directory will inform you whether any of your companies are advertised for meetings, assessments or sales, you are also admonished of the time when meetings are to be held; the amount of assessments levied; the date and time when delinquent notices will appear and the date of sale. As a record of mining transactions for the year, for future reference, this directory will render the bound volumes of the Press indispensable to brokers and secretaries.

Correspondence.—"The Mines of the Sierra Nevada," by F. A. H., is an important article in to-day's issue. Prof. Godfrey gives us further information concerning the Pueblo silver mines. We would thank him to continue, and write us a description of the new Pittsburg mines, near Shasta—an important district, which has never been fully illustrated. "Floy Favorite" has neglected to inform us about the "Virginians" this week, and we have to refer the reader in search of Washoe items to the Associated Brokers' stock remarks.

Thanksgiving.—In accordance with usage, and "in conformity with the recommendation of the President," Governor Low has appointed Thursday, the 24th instant, as a day of public Thanksgiving and Praise. So we suppose that good old New England festal day will not pass entirely unnoticed in this extreme western limit of our common country. Let all be truly grateful for the priceless blessings of life and liberty which we enjoy, and thank God, with all our hearts, for the late grand victories which have been achieved by our armies in the field and by the people at home.

The Camanche was safely launched on Monday last, and now lies at the Third Street wharf, where the work of her final completion will be pushed ahead with the utmost dispatch. The two large guns of which her armament will consist, are now being placed on board previous to the erection of the turret. The process of removing them is slow and heavy. Rollers are placed under the wooden beds on which the guns rest, and they are dragged along by a horse-power windlass with ropes and pulleys, after the common method of house-moving.

Professor Bache, for the last twenty-one years the chief of the United States Coast Survey, is now seriously afflicted with an affection of the brain. He is stopping, and attentively cared for, in the home of his friend and the friend of science, Professor Pierce, of Cambridge, Mass.

Question.—Is your stock advertised?

Answer.—See Shareholders' Directory in the Mining and Scientific Press.

The authorities of Victoria have decided that hereafter no steamer shall clear that port on the Sabbath.

MINING COMPANY REPORTS.

The commercial interest of every country is regulated by established laws whether the forms are adopted by statutes or by custom. This paper has, from its first issue, been devoted to the mining interest of the Pacific Coast, and, to bring about the most feasible plans for the advancement of that interest it has labored assiduously. The miner seeks out the rich deposits of ore, and the capital of the people is drawn upon to develope the hidden wealth; companies are formed, trustees chosen and the work goes forward; all of which is admirable. But how are the shareholders to know of the progress which is made in the development of this hidden store? what method is there at present by which a shareholder can ascertain the nature of his venture? From the books of the company! True, yet a large item of indebtedness would be overlooked by any other than an expert in such matters. Well then the verbal report of the Secretary, or trustees, who have the property in charge? That, too, is insufficient, for the reason that interest might guide the the statement. The only real plan is that trustees publish the report of the superintendent and the condition of the work at its commencement, together with what it will cost to reach the lodes they are in search of, so that each shareholder may know what expenditure is necessary before he can hope for a return on the investment.

Mines that are open should publish, at least semi-monthly reports, of their progress, together with the quantity of ore raised by their superintendent and its approximate value. The cost of raising the ore per ton; the expenditure of any moneys for mining apparatus, and all necessary information in regard to dues and indebtedness entered into and anticipated should be published at least once in three months, by the trustees of every mining company, that shareholders may know what they purchase.

This Journal is ready to publish all of such statements gratis, and has opened a new department for that especial purpose. But we wish all mining company trustees to understand that the public will hold them responsible for the truth of such information, and delinquents will be dealt severely with by us for falsifying their reports. England has laws which punish the superintendent of a mine for advocating reports either to inflate or depress the value of stock, and until we have similar laws created here, this Journal will be careful to get all reports from some reliable source before venturing to publish them.

This plan of publishing the progress of a mine together with all information on which the real nature of the property may be determined, has been urged frequently by us and we are pleased to see that many of the reliable companies have determined on this course, and those who do not follow in their foot-steps will learn that to make their stock marketable, they will be obliged to do so. People will not invest their money in unknown stocks, nor in stocks that keep their value by "Bulling and Bearing." The mining company that has "business" which they keep from the shareholders should be considered unreliable, and in the broadest sense of the term is a "wild-cat company," one which will scratch who ever invests therein. One wild-cat company is of more injury to the mining interest on these shores than is counted upon at first sight, for those who have been scratched thereby deter other capital from legitimate mines.

The immense injury being worked by the wild-cat stock which floats the Atlantic cities, will in a short time rebound and probably cause another panic similar to the one past through, unless all reliable companies publish their statements as set forth in this article.

A word to the wise is sufficient, and we, with all our power, will work to advance the reliable interest of the Pacific Coast.

From the North.—The steamship Sierra Nevada arrived here on Saturday evening from the North, bringing $430,073 in treasure, of which $237,150 was from Victoria and $192,923 from Portland.

S. F. Mechanics' Fair Reports.

COMMITTEE REPORTS

OF THE SAN FRANCISCO MECHANICS' INSTITUTE INDUSTRIAL EXHIBITION OF 1864.

[By authority of the Executive Committee for the management of the Fourth Industrial Exhibition of the Mechanics' Institute, we shall commence, under this heading, until completed, the publication of the Reports and Awards of the Examining Committees in the various departments of the Exhibition, as revised by the Managers to accord with the rules governing the distribution of awards. Where the reports have not been made in form prepared for publication abstracts or digests only will be given. The Managers desire it stated that, while articles originating and manufactured abroad contributed in a degree to the variety and interest of the exhibition, which in return afforded their merits opportunities of becoming widely known, to the advantage of those showing them, the enterprise was intended to be an exposition of the material and industrial resources of this State, and the adjacent Territories, to which the honorary awards must be limited. Believing, too, that the distribution of premiums of several grades among competitors has a greater tendency to produce jealousy and dissatisfaction than to encourage enterprise and efforts for excellence, the Executive Board has determined to allow no second, third, or other interior grade of Premiums.]

Class XXI.

Paper and Its Manufactures—Book-Bindery, Etc.

COMMITTEE:

JAMES LINEN, DAVID H. BALL.
GEORGE T. EMERSON, LUCIUS THOMPSON.

Report:

EDWARD BOSQUE presents a large Ledger, meanly forwarded but beautifully finished. The ruling is the best at the Fair.

BARTLING & KIMBALL present a magnificent specimen of Bank Book-Binding, which was bound to the order of John Parrott. The design is elegant, and the volume beautifully forwarded, but the finishing is imperfect and clumsily executed. The same firm exhibit a Bible in two volumes, folio, bound in morocco, gilt edges, with an elaborate design on the sides. When the volumes are opened, they show large creases in the back part, which are peculiarly objectionable, and ruin the appearance of a costly work. Had the forwarding not been so wretchedly bad (the balance in the workmanship being elegantly executed), the binding would have been a credit to the State. A volume of the "Art Union," in morocco, with blank tooling on back and sides, is more chaste and elegant than the other volumes of great pretensions. The committee think that Bartling & Kimball are entitled to the Premium for Fancy Binding.

HERMAN ALTHOF, in Buswell's Establishment, presents some very beautiful specimens of Morocco and Russian Leather Portfolios and Fancy Pocket-books. They are the best that have been exhibited here, and are justly entitled to the Premium.

L. BRENDENSTEIN.—His fancy Jewelry Cases and nice Boxes for confectionary purposes are elegantly executed, and merit a Premium.

HENRY C. BATEMAN exhibits specimens of Edge-gilding, fancy and plain. By long experience he has brought edge gilding to a state of high perfection. He competes in no other branch of the book-binding business. He merits the Premium in this line.

THOMAS REILLY—Gold Leaf Manufacturer—shows the process of his trade, by exhibiting the gold in the different stages of manufacture, from the time the metal is rolled out into ribbons until it is beaten into thin leaves, cut into squares, and ready for use. He also merits a Premium.

S. P. TAYLOR & CO., Pioneer Paper Mill, Marin Co.—The committee are delighted to notice the fine specimens of Wrapping and Printing Paper exhibited at the Fair by this enterprising firm. The manufacture of paper is a very important business in the community, requiring ability and capital to work it successfully. We hope that the public will sustain this praise worthy undertaking, and that the time is not far distant when a sufficiency of paper will be manufactured in California to meet abundantly all the necessary demands of the Pacific coast. Give encouragement to enterprise and success will assuredly follow. The committee joyfully award the best Premium that the Institute confers upon merit.

SAN LORENZO PAPER MILL, Santa Cruz.—This establishment sends specimens of Straw Boards and Straw Wrapping Paper. There is no use in importing such articles when they can be manufactured in such excellent style at our own door. The bundles of boards and the reams of paper are creditable to the manufacturers and to the State of California. The exhibitors are cordially awarded a Premium.

H. MANNECK & Co. exhibit a fine assortment of Paste Board and light wooden Paper-covered Boxes. The extent and variety of the assortment indicates the growing importance of this new branch of our domestic manufactures. Messrs. Manneck & Co. are entitled to credit for the excellent quality and tasteful finish of the goods exhibited, and, although there was no competition in this line, they well merit a Premium.

G. F. M. GLOVER exhibits samples of Paper Cutting for decoration, beautifully and tastefully executed. Premium.

GEO. B. HITCHCOCK & Co. exhibit a case of splendid Blank Books, which were bound bound by Buswell & Co. For counting-room utility and creditable specimens of ruling, sewing, forwarding and furnishing, there is nothing superior to them in the Fair. As they were entered by the sellers, and not by the manufacturers, your committee refuse to receive them as books for competition, believing, as they do, that persons who merely give orders and pay for them in the common way of business have no right to compete for honors that belong only to the producers or manufacturers.

[I fully agree with this report, with the exception that I think Geo. B. Hitchcock & Co. are entitled to competition by the rules of right and justice.

LUCIUS THOMPSON.]

Class XXII.

Glass, Porcelain, Etc.

Report:

The extensive display of wares made by the PACIFIC GLASS COMPANY furnished a striking evidence of progress in the development of our manufacturing resources, and the gentlemen whose capital and energy have overcome the numerous difficulties encountered in the experiment of manufacturing glassware of the class required by our great producing interests, can scarcely be more gratified than the public at large with the evidence of success afforded by this exhibition. From an octagonal base twelve feet in diameter, a series of terraces rising to a height of fourteen feet, filled with a great variety of Wine, Soda, Sauce and Mustard Bottles, Pickle and Fruit Jars, Prescription Phials, Lamp Chimneys, etc., crowned with a huge Acid Carboy, gave assurance that the days of dependence upon uncertain imported stocks, and the gleanings of the chiffonier have passed away. It is only about two years since this enterprise was inaugurated, and the progress made in this period appears in the highest degree creditable and encouraging; and it may be hoped that it will be found practicable and profitable to extend it to embrace the manufacture of every description of Glass and Glass-ware Premium.

J. MALLON & Co., exhibited specimens of Ground and Cut-Glass, for transom and side-lights, windows, signs, etc. For design and execution these specimens would rank with the best work to be found in the large Eastern cities, and they merit a Premium.

D. BRANNAN exhibited Stoneware and Terra Cotta Architectural Ornaments, which have been noticed and recommended for Premium by another committee.

H. HEIZER exhibited a lot of Crucibles and Mattles, also noticed and recommended for Premium by the committee above referred to.

HAYNES & LAWTON exhibited a fine assortment of rich American Cut and Flint Glassware, French, Chilan, Parisian and Bronze Statuettes, Vases, etc.,—all imported.

R. A. SWAIN & Co. also made a fine exhibition of rich Imported Glass, Porcelain and Plated Wares.

JOHN TAYLOR had on exhibition an extensive assortment of Chemists', Assayers' and Apothecaries' Scales, Crucibles, Retorts and other utensils.

A. SEN, W. LUDEMAN, and H. SCHUMANN, each had a show case of fine Meerschaum Pipes and other fancy articles.

HAYWARD & COLEMAN made a fine exhibition of Imported Lamps, many of them of the richest pattern and finish. They also exhibited a Lantern of home invention and manufacture, furnished with a kerosene lamp and concave reflector. Several of these lanterns were employed by the night watchmen at the Pavilion, and the testimony as to utility and efficiency is ample to warrant the award of a Premium.

Class XXIII.

Coal Oil, Turpentine, Rosin, Compounds, Soap, Etc.

COMMITTEE:

D. S. CUTTER. D. KANARY, J. H. C. PORTMAN.

Report:

While petroleum oil springs of much promise are found in many places in the State and elsewhere on the coast, they do not appear yet to have been successfully worked to any extent. Since the outbreak of the rebellion, which has sealed up the old sources of supply, the business of gathering and distilling pine pitch has been greatly stimulated here, and what is reported to have occasioned much needless destruction of valuable timber. Severe statutory enactments have been found necessary to arrest this waste, and much more care is said to be now exercised in the prosecution of this business, which yields a considerable surplus for export after supplying the home demand.

E. BENOIST exhibited samples of Crude and Refined Coal Oil from the Buena Vista Petroleum Works, in Mariposa county. Premium.

J. H. CHURCHILL is entitled to the credit of a new process of Extracting Petroleum Oils. Premium.

W. C. JONES, for the best samples of Turpentine and Rosin, is entitled to the Premium.

HICKS & LAMBERT, for the best sample of Pitch, and for their superior Axle Grease, should receive a Premium.

J. F. FUGAZI, of Marysville, for the best quality Colophony, Premium.

H. L. BESSEMER exhibited samples of Pomatum, Hair Restorative, Cosmetics and Tooth Powders, handsomely put up and agreeably perfumed.

SUB-DIVISION—Soap.

COMMITTEE:

W. H. BOYEE, J. H. CHURCHILL.

Report:

THE EUREKA SOAP CO. exhibited a Soap, of superior quality, for general use, and entitled to a Premium.

THE STANDARD SOAP CO. had also on exhibition samples for competition.

FRANCIS LEPHART had a sample of excellent Soap, but without particulars, which would place it fairly in competition.

Class XXIV.

Stone-Cutting, Masonry, Etc.

Report:

Two contributions alone can, with any propriety, be classed under this head.

JOHN GUINANASCO exhibited a unique specimen of Composition Flooring, formed of small stones, of various natural colors, set in cement, and rubbed down to a smooth, even surface. The colors were arranged in figures, forming an agreeable pattern in miniature Mosaic. The practical value of such a flooring would, of course, depend in its cost and quality of durability.

SOME CONTRIBUTOR exhibited two barrels of very superior Lime, but failed to make any entry of his name or the contribution. The quality of the lime was generally noticed with approbation, and would entitle the producer to the Premium if he can be identified.

Class XXVI.

Oil Painting, Photographs.

Report:

The Fine Art Department of the Exhibition, in the variety, number and excellence of the contributions, surpassed all expectations. The constant pre occupation of the great body of our new and partially floating population in the more material pursuits of alluring promise or necessity, has afforded no great degree of encouragement to the art student, either in the way of inspiration or patronage; but the evident relish with which thousands of visitors, day and evening, for a month, enjoyed this exhibition, bespeaks the dawn of a better day for the art interests among us. The Painters and Photographers elected to exhibit their works without engaging in competition for Premiums. One of the four galleries, 27x100 feet, was occupied with the works of the resident oil painters. The walls of another, of similar dimensions, were filled by the photographers. The remaining two were crowded with Paintings, Drawings, Engravings, Statuary, Wax Work, Tapestry, Pictures, Fancy Shell Moss and Hair Work, Curiosities, etc., forming, in the whole, an extensive museum and art exhibition of uncommon excellence and attraction.

Class XXVII.

Drawing, Penmanship, Etc.

SUB-DIVISION—Architectural and Mechanical Drawing.

COMMITTEE:

M. F. BUTLER, T. OROB.

Report:

The Premium for Mechanical and Machine Drawing is awarded for the specimens exhibited by the pupils of the "Industrial Drawing Academy."

And the Premium for Architectural Drawing to L. E. REYNOLDS.

SUB-DIVISION—Penmanship.

COMMITTEE:

F. SEREGNI, T. OROB, V. SQUARZA.

Report:

The committee consider it necessary to make a distinction between Practical and Ornamental Penmanship, and they find, after careful examination and comparison, that LUCIUS M. FERNANDEZ is entitled to the First Premium for Ornamental Penmanship.

F. S. BUTLER merits the Second Premium, or honorable mention.

W. G. DOOLITTLE merits the First Premium for the Best Commercial Handwriting.

H. G. WALTON merits an honorary award for the beautiful regularity, order and perfection of Pen-Work, shown in his specimens of "Compliation and Penmanship," "Statistics of the Mariposa Estate."

Class XXVIII.

Sculpture, Marble and Wax Work, Etc.

SUB-DIVISION—Sculpture.

COMMITTEE:

THOS. HILL, O. GOUI, B. TAFT,
J. B. WANDESFORD, FORTUNATO ARRIOLA.

Report:

Your committee, appointed to adjudge upon the merits of the works in this department of the Exhibition, find that while several of the competitors present works of considerable merit, those of Mr. MEZZARA are entitled to the highest award for excellence. Premium.

MR. P. J. DEVINE'S Marble Bust of a Child is very meritorious, and in opinion of the committee, his is the best Plaster Bust of the late Rev. Thomas Starr King which has yet been exhibited.

SUB-DIVISION—Wax Work.

COMMITTEE:

P. MEZZARA, FORTUNATO ARRIOLA, M. F. BUTLER.

Report:

The work of this class comprised many exquisite imitations of Fruits, Flowers, Shells, Parian Statuary, etc.

The Premium for Wax Flowers is due to MADAME MIEL, whose imitations are the most perfect and beautiful of any we have ever met with.

MRS. A. UNGER and MRS. M. COMFORT each had beautiful specimens of Flowers, which should be honorably noticed.

MISS LOUISA MCLANE is entitled to honorable mention for excellent pieces of imitated Fruit.

MRS. J. B. HARMSTEAD had a fine and very extensive collection of Wax Works, comprising, among other subjects, some exquisite imitations of the most ornate and delicate Parian Wares. The talent and industry represented in the handsome collection exhibited by this lady, entitle her to the award of a Premium for General Wax Work.

Class XXIX.

Sign, Ornamental Painting, Graining, Etc.

Report:

In this department the number of contributions was comparatively small.

HENRY PAULISSEN exhibited several specimens of Fresco Painting on Plaster. The designs were very well executed for effect, and the colors remarkably brilliant. No competition was offered in this line. Premium.

HORN & KANARY exhibited a very finely executed piece of Glass Plate Sign Painting. Premium.

[illegible] and G. WINTER each exhibited good specimens of Gilding and Embossing on Glass.

C. & G. W. HUTCHINSON exhibited handsome specimens of Block Letters for Signs.

E. TUBORQUE—Several well-painted Signs.

A. & T. TORNING—A handsome specimen of Sign-writing.

D. A. STERNE, of Watsonville—Panel specimen of Ornamental Conch Painting.

F. T. MCAULIFF—Samples of excellently imitated Rosewood, splendidly polished. Premium.

Class XXX.

Boats, Ships, Models, Etc.

COMMITTEE:

L. L. BATCHELDER, THOS. BIGLEY, H. S. BROWN.

Report:

JOHN REED exhibits a Life Boat (model), combining good lines and bearings, with remarkable air-chamber capacity, and a provision of valves so arranged that the buoyancy and motion of the boat will relieve her of any water which may be shipped. The builder states that he first constructed the boats on this plan in Boston, where they were subjected to test, and adopted by the Massachusetts Humane Society. The plan is certainly deserving the inspection of that class of our citizens whose duty it is to provide for the safety of those who "go down to the sea in ships," and to them we commend it with our award of Premium.

MR. REED also has a well built and moulded Four-oared Boat in the Exhibition.

RONALD COOK, of Benicia, exhibits a large Iron Life Boat, built in the most thorough and substantial manner.

C. COYLE exhibits a Four-oared Race Gig of the leanest and lightest mould, well calculated to tempt our young men to a practice not yet so popular here as in the Eastern sea-board cities, where exercise with the oar is thought as conducive to health and manly accomplishment as practice with the billiard cue. Premium.

W. B. HOYT exhibits a Skeleton Boat, for a pair of Sculls, and as a specimen of nice cabinet boat building it is very admirable.

J. T. JONES exhibits a beautifully cut Half Model for a Yacht. The lines are easy and very fine, but might possibly be improved with a little more floor amidships.

MELVIN SIMMONS exhibits an elegant Half Model Pilot Boat, showing well-defined lines and good bearings, insuring speed and buoyancy. The excellence of this model entitles it to a Premium.

KIMBALL & THAYER exhibit a very fine Half Model Schooner, well moulded for speed and carrying capacity.

D. C. M. GOODSELL exhibits a number of Builders' Half Models, embracing several for iron-armored gunboats, rams and floating batteries, together with a section showing a plan of attaching armor-plates without exposing bolt or screw heads. These models have the merit of originality in several features, and it is very plausibly claimed by the exhibitor that ships upon the plan shown would effectually resist shot with much lighter clothing of armor-plates than is found necessary upon those constructed on the original "Monitor" plan. The committee do not feel competent to pass upon the merits of these claims which could be determined by a committee of naval or military engineers only upon a practical test.

S. MARION exhibits two finely-proportioned and fitted full-rigged Model ships; one, the "Excmpt Fireman," is remarkably "ship-shape" from keel son to truck; every spar, shroud, stay and brace testifying to the zeal, skill and patience of the maker, whose ideal ship is so perfectly wrought out in miniature. Mr. Marion deserves a Premium.

PETER WILSON exhibits a full rigged Model Ship, regularly framed and planked, but deficient in mould and proportions.

There are one or two other Models in the Exhibition, of more or less merit, but not entitled to special mention.

Class XXXII.

Fire-Arms.

COMMITTEE:

O. H. BEGART, A. B. NUTTING, W. H. BROWN,
(J. W. KISSINGER dissenting.)

Report:

The competitors in this department engaged in the Exhibition with the spirit and confidence of men conscious of merit and the ability to show work which any workman might be proud to claim, and the duty imposed on the committee was one of no ordinary delicacy and difficulty. The competition was made solely on Double-Barreled Shot Guns and Rifles, and the committee, after careful comparative examination, award to R. LIDDLE & Co. the Premium for the Best Double-Barreled Shot Gun.

A. J. PLATE & Co. are entitled to honorable mention for a Double-Barreled Shot Gun, of fine quality.

J. VILLEGIA is also entitled to honorable mention for Guns of fine quality and excellent finish.

JOHN BACH is awarded the Premium for the Best Rifle.

Class XXXIII.

Wines, Liquors, Cordials, Etc.

SUB-DIVISION—California Wines.

COMMITTEE:

N. LUNING, L. J. CZAPKAY,
M. CODY, B. B. REDDING.

Report:

The marked improvement made each year in the quality of California Wines is noticed with satisfaction by the committee. The products of the same vineyards in 1863 are superior to those of previous years. The improvement is doubtless due, in part, to acquired experience, but chiefly, in opinion of the committee, to greater care in selecting the fruit at the proper stage of maturity, and to greater neatness in conducting all the processes of the manufacture. Some of the Wines offered in this exhibition would rank as superior in their class in the wine countries of Europe. The samples offered in competition were submitted to the committee, distinguished only by numbered labels, designating the age and class, an officer of the Exhibition retaining the reference list corresponding with the numbered labels. Considering it proper that honors should be awarded to producers only, the Committee adopted a resolution, directing that the name of the producer or vineyard, alone, should be mentioned in the report.

White Wine, Vintage 1863—First Premium, O. W. CRAIG; Second Premium, M. KELLER, Los Angeles. Both of the above Wines are of superior quality for one year's growth, and so nearly equal that the committee hesitated which to award the First Premium, but decided as above.

White Wine, Vintage 1862—First Premium, HENRY GERKE, Tehama county.

White Wine, Vintage 1861—First Premium, UNITED ANAHEIM WINE GROWERS' ASSOCIATION; Second do., MOUND VINEYARD.

White Wine, Vintage 1860—First Premium, KOHLER & FROMLING, Los Angeles; Second do., B. D. WILSON, Los Angeles.

Of the White Wines vintage 1857 and 1859 there is but one sample exhibited of each, and in the opinion of the committee neither is worthy of premium.

Rock, Vintage 1862—First Premium awarded to DR. WOOSS, of Napa; no competition, but the committee find it worthy of special commendation.

Rock, Vintage 1856—First Premium, KOHLER & FROMLING, Wolfskill's Vineyard, Los Angeles.

Rock, Vintage 1859—First Premium, KOHLER & FROMLING, Wolfskill Vineyard, Los Angeles—no competition. This wine having been shipped via Cape Horn, the committee believe it has improved considerably.

Red Wine, Vintage 1863—First Premium, HARASZTHY & GIOVANARI, Lachryma Montes Vineyard; Second do., HARASZTHY, Quiquiriqui Vineyard.

Port, Vintage 1862—Premium awarded to D. B. WILSON'S Vineyard, Los Angeles.

Red Wine, Vintage 1862—First Premium, UNITED ANAHEIM WINE GROWERS' ASSOCIATION; Second do., W. O'DONNEL, San Jose.

Red Wine, Vintage 1861—Premium awarded to J. S. HITTELL.

Port, Vintage 1860—Premium awarded to D. B. WILSON'S Vineyard, Los Angeles, with the unanimous opinion of the committee that this is the most excellent wine of its class on exhibition.

[*Note*—This wine is of such excellence, and so much superior to any exhibited of this kind of wine, that the committee were inclined to doubt whether it was entirely a California production.

Port, Vintage 1858—Premium awarded to KOHLER & FROMLING, Coronel's Vineyard, Los Angeles.

Port, Vintage 1859.—No competition—Premium awarded to KOHLER & FROMLING'S Vineyard, Los Angeles. This wine has been shipped via Cape Horn, and the committee believe it has improved considerably with the voyage.

Sherry—First Premium, D. B. WILSON'S Vineyard, Los Angeles; Second do., M. KELLER'S Vineyard, Los Angeles.

Madeira—Premium awarded to M. KELLER'S Vineyard, Los Angeles.

Angelica—First Premium, U. A. W. G. ASSOCIATION; Second do., B. D. WILSON'S Vineyard, Los Angeles.

SUB-DIVISION—Liquors, Cordials, Etc.

COMMITTEE:

DR. I. ROWELL, DR. L. J. CZAPKAY, F. C. BELDEN.

Report:

The committee, in conducting the examinalior of the articles offered for competition in this department, had no means or desire to know the samples of the several competitors. The bottles were numbered, and the samples passed upon under these fictitious designations, subsequently identified by the reference list corresponding with the entry book of the Exhibition.

Grape Brandy, 1859, no competition—Premium to Kohler & Frohling.

Peach Brandy, 1859, no competition—Premium to Hobbs, Gilmore & Co. The committee find this an excellent article.

Grape Brandy, 1861, no competition—Premium to United Anaheim Wine Growers' Association.

Grape Brandy, 1862—Premium to Haraszthy & Giovanari. The committee find this brandy an excellent article, and much superior to those samples in competition against it.

Pear Brandy, 1863, Peach Brandy, 1863, Apple Brandy, 1863, no competition—Premium to W. O'Donnel, San Jose.

The committee report favorably on the Currant Wine exhibited by Mrs. Barnes.

Aguardiente, 1859, no competition—Premium to Kohler & Frohling.

The committee report favorably on the Rum Extract exhibited by A. Fenkhausen.

The committee find the Blackberry Cordial exhibited by E. 1. Barra a very superior tonic and astringent, and worthy of recommendation.

Bitters—First Premium to V. Squarza; Second do. to Byrne & Castree. The above bitters are a selection of six different samples, and the committee, having denied some wine on the qualities of each, decided as above.

The committee award First Premium to V. Squarza for Punches and Cordials. The committee, after a careful examination of the Squarza Punches, unanimously declare them to be composed of the best material, and manufactured with science and utmost care.

[As by the rules of the Exhibition no second or other inferior grade of Premiums are allowed, the awards of "Second Premium" made by the committees will be taken to signify the rank of the product honorably distinguished.]

The New York Brewery is awarded the Premium for the Best Lagerbeer.

"THE MINING AND SCIENTIFIC PRESS."—We would call attention to the advertisement of "The Mining and Scientific Press," (Messrs. Dewey & Co., Proprietors), one of the best conducted and most valuable weekly journals published in America.—*Golden Era.*

SANTIAGO MILL.—This mill, says the *Territorial Enterprise*, erected by the Santiago Mining Company this fall, at Zephyr Flat, on the Carson, has just been completed. It is driven by water power, and contains twenty-four stamps, (each weigbing eight hundred pounds,) eighteen pans and five separators. At present they are crushing twenty five tons per day, Savage ore, but the mill is capable of crushing forty-five tons per twenty-four hours. The mill was erected under the superintendence of Mr. Donald McKay, also Superintendent of the Santiago mine. The machinery of the mill was erected by Mr. C. W. Harden, assisted by Mr. Chas. W. Booth and others. All the workmen employed upon the mill speak very highly of Mr. McKay, and wish to state that his treatment of them has been most kind and generous, all hands being paid off in coin on the completion of the work. Mr. McKay speaks very highly of those to whom the erection of the mill and machinery was entrusted; so it appears that all were well suited. The workmen, on leaving, gave Mr. McKay "three times three hearty cheers." It is said to be one of the most complete mills in Nevada. The Superintendent will at all times take pleasure in showing visitors through the new mill.

SECRETS OF MAGIC.—Robert Houdin concludes his memoirs with a chapter of Arab miracles, which he explained. The Aissaoua eat pounded glass. Houdin powdered some for himself and ate it, and he avers that his appetite for dinner was improved by the dose. They walk on red hot irons with their bare feet, and pass their tongues over white hot pieces of iron. Prof. Sementrici discovered that by rubbing into the skin a solution of alum evaporated to a spongy state, it was rendered insensible to the action of red-hot iron. He rubbed himself with soap, and found that even the hair did not burn. He ruhbed the alum with his tongue, and lapped the glowing metallic surface without pain. Houdin himself tried passing his bands, slightly dampened, through a stream of melted iron, and found, as others have done, that it left no scar on him. An English conjurer used to thrust a sword through his body, shove a knife up either nostril to the handle, and thus spitted sing a song. Houdin bought the secret of the invulnerable and now divulges it. The performer was very thin. With a waist-belt he strapped his tender paunch tight down upon the vertebral column, substituted a card-board stomach for the suppressed part, covered all over with flesh colored tights; between the true and false abdomen he fastened a seabhard, covered the appertures on the sides with rosettes, placed a sponge filled with a red liquid in the scabhard, and there thrust his sword, which came out covered with bogus blood, of course. The pug-nosed mountebank enjoyed a physical conformation, which permitted the delicate and delightful performance.

THE sixteen-wheeled railroad car intended for the President's use is finished, and is awaiting orders at Alexandria. It is the most elegant thing of the kind ever seen in this country. Its cost was thirty thousand dollars. It has sleeping apartments, parlor, and a secretary's office. It is to he presented to our Chief Magistrate, and to be used by him and his successors.

AN ingenious Parisian has invented a boat in which a person can bathe, the water flowing through it, and move about at the same time—a sort of floating cradle, with a tent roof and sides, and a kind of hand propeller.

THE Proprietors having recently added to this Establishment the latest and most approved Machinery for the Reduction and Testing of ORES of all sorts—either in large or small quantities—are prepared to test Ores by such process as may be ascertained best suited to their chemical character, after a careful analysis being first made. Assays, either in the humid or dry way, made of all Minerals. Also, Refining and Cupellation attended to.
Particular tention paid to the Smelting of Copper and Silver Ores.
S. P. KIMBALL J. R. MURPHY.
14-3m

Volcanic Smelting Furnace.
PERSONS desiring information as to the Use and Economical properties of this Furnace, and intending to make use of the same, when satisfied of its superiority over all other means of reducing ores and separating metals from the sulphurets, can obtain all needed explanation and advice in regard to the same, and the terms of sale of rights to use the same, on application to Col. J. D. Stevenson, or Mrs. E. J. Hall, Proprietress, 633 Third street, San Francisco.
Drawings may be seen at the office of Col. J. D. Stevenson, No. 614 Merchant street.
The time required for reducing ores by this Furnace is from three to eight hours, and the amount of fuel only one-tenth as much as is consumed by other processes.
The process of condensation is applied to this Furnace which will save all those portions of precious metals which usually escape in a volatile form.
The attention of all interested in the subject is requested to examine the important results obtained by this process.
Parties wishing will be allowed to erect a trial furnace of a capacity for smelting one ton or more, on signing an obligation to pay the usual fee for the right to use it, should they continue to make use of the invention for a longer period than two months.
v9-20tf **MRS. E. J. HALL,** Proprietress.

Evening Instruction in Anylitical Chemistry and Assaying,
Conducted by Thomas Price.
(Agent for the Swansea Ore Importers in California.)
HAVING FITTED UP A LABORATORY ESPECIALLY for instruction in Analysis and Assays, the subscriber begs leave to announce that
A NEW CLASS WILL BE FORMED
On the 1st of June. For terms apply at the Laboratory, on the evenings of Tuesday and Saturday at 7 o'clock; or at the office of the "Pacific Mineral Company," Odd Fellow's Hall, Montgomery street. THOMAS PRICE.
San Francisco, May 10th, 1864. 20

Origin of Brandy.

Brandy began to be distilled in France about the year 1313, but it was prepared only as a medicine, and was considered as possessing such marvellous strengthening and sanitary powers that the physicians named it "the water of life," (*l'eau de vie,*) a name it still retains, though now rendered, by excessive potations, one of life's most powerful and prevalent destroyers. Raymond Lully, a disciple of Arnold de Villa Nova, considered this admirable essence of wine to be an emanation from the Divinity, and that it was intended to re-animate and prolong the life of man. He even thought that this discovery indicated that the time had arrived for the consummation of all things—the end of the world. Before the means of determining the true quantity of alcohol in spirits were known, the dealers were in the habit of employing a very rude method of forming a notion of the strength. A given quantity of the spirits was poured upon a quantity of gunpowder in a dish and set on fire. If at the end of the combustion the gunpowder continued dry enough it exploded, but if it had been wetted by the water in the spirits, the flame of the alcohol went out without setting the powder on fire. This was called the proof. Spirits which kindled gunpowder were said to be above proof.

From the origin of the term "proof,' it is obvious that its meaning must at first have been very indefinite. It could serve only to point out those spirits which are too weak to kindle gunpowder, but could not give any information respecting the relative strength of those spirits which were above proof. Even the strength of proof was not fixed, because it was influenced by the quantity of spirits employed—a small quantity of weaker spirit might be made to kindle gunpowder, while a greater quantity of a stronger might fail. Clarke, in his hydrometer, which was invented about the year 1730, fixed the strength of proof spirits as the stem at the specific gravity of 0.920 at the temperature of 60 degrees. This is the strength at which proof spirit is fixed in Great Britain by act of Parliament, and at this strength it is no more than a mixture of 49 pounds of pure alcohol with 51 pounds of water. Brandy, rum, gin, and whisky contain nearly similar proportions.

THE OPEN BOARD OF STOCK BROKERS AT NEW YORK.—This board was opened to the public on Monday morning, the first of August. The building is located in Broad street, near Wall. The dimensions are 80 feet by 42, with a ceiling 25 feet from the floor. There is also a fine airy gallery on three sides of the room, which will be open to visitors. On the main floor of the building there are no less than 130 seats, intended for the accommodation of persons who are not regular members of the board. The galleries will seat 250 persons.

THE Chollar mine, according to the Victoria City *Enterprise*, is giving out at the rate of one hundred tons of splendid ore every twenty-four hours.

Reports of the Exhibition.—Owing to the omission of exhibitors of certain classes to elect committees of award, the Executive Committee of the Institute, at its meeting of Oct. 27th, authorized the President to select a special committee to act in the premises and report upon articles thus inadvertently omitted from the several reports. The report of this special committee, together with a general report of the Executive Committee, will appear in due time.

To News Agents.—After this date we shall furnish no dealers, outside of this city, with the PRESS upon any other terms than those of regular subscription. Those who will forward us the names of new subscribers shall receive liberal commissions.

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal news agents.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alteration, which they may desire made in their advertisements, at their earliest convenience. New advertisements should be sent in as early as possible.

IMPORTANT DISCOVERY
—IN THE—
Photographic Art.
Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.
[PATENT APPLIED FOR.]

THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a
SOFTNESS, CLEARNESS AND DELICACY OF TONE
unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.
In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.
"*Cartes de Visite*" *and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.*
☞ The public are invited to examine specimens at my Gallery. ☜ JACOB SHEW.
6-tf 315 Montgomery street, near Pine.

RAILROAD HOUSE.
316, 318 & 320 Commercial Street,
SAN FRANCISCO.

THE Undersigned respectfully notifies his Patrons, and the Public generally, that he has assumed the entire charge of above popular House, and having had it thoroughly renovated, he flatters himself it will compare favorably, in point of comfort and cleanliness, with any House in the city. It is his intention to make it a First Class
Family Hotel.
Being conducted on the European plan, it is not only the CHEAPEST RESPECTABLE HOTEL, but the most convenient as guests can choose their own hours of eating. The Restaurant is now conducted by G. V. DAWSON, Esq., formerly of Sacramento, late of Marysville, whose name is sufficient guarantee of the best of living.
The Railroad House Coach conveys passengers to the hotel FREE. Barber Shop, Bath Rooms, Steam Baths, etc., connected with the House.

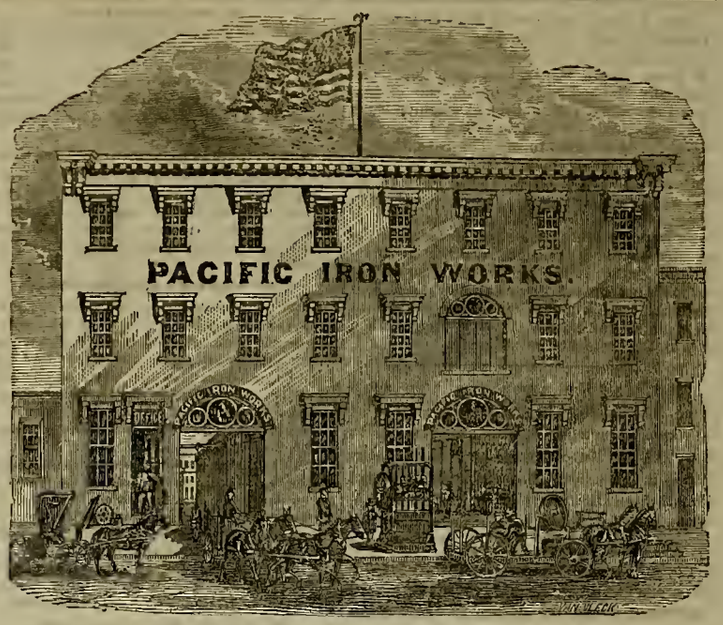
SCIENTIFIC AND MINING JOURNAL.—This is as valuable a publication as is produced on the Pacific Coast, and one which interests all parties. It contains much that is instructive and entertaining, and seems to have the right men at the head of its affairs.—*Spirit of the Times.*



THE PACIFIC IRON WORKS,
First & Fremont Sts., between Mission & Howard, San Francisco.

The proprietors of the above works, invite the attention of all parties interested, to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated
Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.
GODDARD & COMPANY.

THE Atlantic cable, which is to be laid next summer between England and America, was recently tested to try its strength and ductility. A given length was taken, suspended, and gradually weighed until it broke, the elongation succeeding each additional weighing being duly registered. The cable selected bore the weight of three-fifths tons. The case, the spiral wires involving it, the insulating body, the jute yarn, and each separate strand of the cable were similarly tested. It was found from those experiments that the more the fibres of wire were brought into a state of tension, the greater became its strength, and that as an insulator gutta percha, although not so perfect as India rubber, is far more durable, and that the cable as now manufactured will be able to bear a strain four times its own weight when laid at the bottom of the Atlantic.

METEORIC.—The astronomers have again been disappointed in the non-appearance of any unusual meteoric display from the 12th to the 15th of November. Some of the stargazers in Sacramento, however, insist that had it not been for the brilliancy of the moon, which hid the lesser lights, they would have had quite a brilliant display of "shooting stars" in the heavens over that favored locality on one of the evenings in question.

1852. 1864.

TWELFTH YEAR OF PUBLICATION.

THE GOLDEN ERA,

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in the Golden Era.

The most popular Novels of the present day—

"THE DOCTOR'S WIFE," by Miss Braddon.

"OUR MUTUAL FRIEND," by Charles Dickens; published as Serials, from week to week, in THE GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the Contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California, and on the Pacific Coast; also correspondents and contributors of distinguished talent in the Atlantic States and Europe; including "Orpheus C. Kerr," Fitz Hugh Ludlow, G. B. Densmore, "Mark Twain," Dan De Quille, Florence Fane, Miss Emma Hardinge, Sarah E. Carmichael, Annie E. Fitzgerald, "Occasia Owen," Alice Mason, William Simpson, Chas. F. Stoddart, "Ina," H. C. Williston, "Albion," "Fairfax," Bonnevel, Mary Kyle Dallas, Margaret Hosmer, and many other accomplished writers of Fiction, Romance, Novels and Stories, Poetry, Essays, Sketches, etc., etc., comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States or Europe.

The proprietors of the GOLDEN ERA announce the receipt of advance Sheets of Miss M. E. Braddon's New Novel,

The Doctor's Wife,

The most brilliant effort of the celebrated author of "Aurora Floyd;" "The Outcasts;" "Three Times Dead;" "Lady Audley's Secret;" etc., etc.

"THE DOCTOR'S WIFE," now in course of publication in London, is universally pronounced to be Miss Braddon's greatest production. It will be completed in sixteen numbers of THE GOLDEN ERA.

THE GOLDEN ERA TO CLUBS.

Parties (living remote from localities where agents are located) forming a club of five yearly or half-yearly subscribers, and forwarding the subscriptions (by letter registered and postage paid) to the office of publication in San Francisco, will be entitled to an additional copy of The GOLDEN ERA for the term of one year, or to retain the equivalent in cash.

AGENTS in every part of the State receive subscribtions for the GOLDEN ERA.

POSTMASTERS in California, Oregon, and neighboring Territories, obtaining subscriptions for the GOLDEN ERA and forwarding the same, with name and address of the subscriber, will be allowed a commission therefor.

PARTIES residing in localities where no Agents are established will forward their subscriptions by mail.

SUBSCRIBERS will be careful in writing as plainly and fully as possible, the direction of papers to be sent to any part of California, the Atlantic States, or elsewhere.

Now is the Time to Subscribe.

TO ADVERTISERS!

Best Advertising Medium—The "Golden Era" is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village, and mining and agricultural precinct in California, and offers unusual and unequaled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

DUNBAR'S
PATENT SELF-ADJUSTING
Piston-Packing.

Requires no Springs or Screws; Is always Steam Tight, without excessive friction, and never gets slack or leaky.

IT WILL SAVE EACH SEASON MANY TIMES ITS COST in friction, time, steam and power. No engine, old or new, should be without it. It can be easily fitted to old or new Pistons.

Having obtained the Agency of this VALUABLE IMPROVEMENT, I am prepared to furnish it wherever desired. For further information, address HENRY S. SMITH,
23v8 Golden State Iron Works, San Francisco.

IMPROVED WATER-WHEEL,
—PATENTED BY—
JOHN TYLER, WEST LEBANON, N. H.

Giving the Maximum Power with the Minimum Cost; Having the Following as Some of Its Advantages Over Others—Giving the Best Percentage of Water Used, Durability,

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—It can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 500 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address SMITH & HANSCOM,
15v8-3m Golden State Iron Works, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

FARRAND'S
Oscillating Amalgamator,
RECEIVED THE
ONLY PREMIUM
AWARDED FOR AMALGAMATORS
At the Recent Industrial Fair
OF THE
Mechanics' Institute of San Francisco.

Committee of Awards.

O. BELDEN, W. T. GARRATT, H. P. WAKELEE,
O. GORI, GEO. JOHNSON, C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall, and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, whilst the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulphurets, as also for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,
R. L. OGDEN, Agent, SAN FRANCISCO.
S. E. corner Montgomery and California streets.
v9-19

Disney's Cylinder Amalgamator.
The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.
San Francisco, June 23, 1864. 1-3m

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percetage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER.

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 864.]

nov8 3m* HEPBURN & PETERSON.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.
sep21

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.
San Francisco, April 1st, 1864. 14v8-tf

SALMON'S
PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any others presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to clean and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a Stone or Iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of wings placed like a screw propeller on the muller-shaft, force a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarity of propeller-screw and side wings, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The Inventors of this machine are practical Mechanics as well as experienced miners, and the machine offered by them to the public is the result of long experience and close observation. Manufactured at the San Francisco Foundry, San Francisco, Cal. by

J. & W. C. SALMON,

To whom all orders should be addressed. 15

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

Mr. Hansen, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber is also perfecting a HAND MACHINE for Miners engaged in prospecting, which will work 25 pounds of ROCK at a time, and which will weigh about 125 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

THE RIP VAN WINKLES OF OUR RACE.—One of the most succinct and comprehensive statements of the kind we have ever seen, appears in a Wesleyan missionary anniversary. It is a passage worth preserving:

"I suppose that no country has ever had such a united intellectual development as China. The Chinese is the largest, yet, beyond its own realm, the least influential of monarchies. From China no mission ever started, no conqueror ever marched. Before all people in rudimental invention, they are behind all people in development. They had both gold and silver coins before the first Darie was minted, yet they traffic by the scales to this day. They first had gunpowder, but have got little further with its use than to blaze it away in crackers. They were long beforehand with the magnet, but no junk ever crossed the ocean except in tow of a British ship.

They have printed from time immemorial, but their literature awakes no progressive intellect. They have made glass for two thousand years, and ordinarily do not make it clear enough to see through yet. Their astronomy is astrology, nor has their chemistry yet awoke from dreams of alchemy. They have politeness, but its odd forms and slavery of etiquette only make them more unsociable. They have a wonderful language, but its elaborate cleverness is a curse and a fetter to their minds, making it the labor of a life to read. They are not without notions of dignity, but the men find it in nails long enough for claws, and the women in feet crushed into the shapelessness of hoofs. In the South Atlantic there is a sea—the great Sargazo. All the currents pass by it. Dull, dead, heaving waves, just move the heaped up tangle of wrecks, that rot in that stagnant, melancholy ocean limbo. China is the Sargazo sea in the ocean of humanity."

FIRST MAPLE SUGAR.—The important discovery that sugar can be made from the maple tree, has been attributed to New England, and its date fixed as far back as 1765, in an article which has gone the rounds of the press. This statement has called forth a unanimous, indignant and patriotic protest on the part of the French Canadian press, and we give with pleasure currency to their claim for priority of discovery. They state that maple sugar was in general use in Canada previous to the Revolution, and long before *Dudley's Register* recorded, in 1765, its first manufacture in New England. Indeed, the Jesuit priest Charlevoix, in his History of New France (Canada), wrote as early as 1721 an account of the process by which the sugar was obtained, stating that the sugar was unknown to the Indians, thus favoring its French origin. All honor, then, to the French Canadians for the maple sugar, unless our New England contemporaries have records to substantiate their claim beyond the year 1721.

THE WATEREE.—The double-ender iron gunboat *Wateree* is still detained at Mare Island, undergoing a thorough overhauling and repairing, after her long voyage. It will be some weeks yet before she will return to the harbor in complete sailing and fighting trim.

IN delivering one of the Cantor lectures, Dr. Grace Calvert alluded to the subject of bird's-nest gelatine, used so much in China in the preparation of soup. These curious gelatinous products are not only considered great delicacies in India and China, but even in Europe, where they realize from £3 to £7 per pound.

BY an ingenious regulation, the cabmen of Paris are prevented from cheating their passengers. The law prescribes that they shall be paid by the mile, and a dial wound by clock work, set in motion by the revolution of the wheels, shows the distance travelled.

MORE than one hundred steam fire-engines, including two for London and one for Russia, have been built by the Amoskeag Company, of Manchester, N. H.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

MINING COMPANIES and others connected with the Mining Interests of California, will find all possible desired information in the *Mining and Scientific Press* of San Francisco, which is an ably edited Journal, smartly handled, and well up to the times. The Mining Companies of California, are awake to the advantages of having their Mining Notices, comprising Assessments, Dividends, Elections, &c., concentrated in the advertising columns of one Journal, as we notice in the issue of the *Press* of May 7th, there are no less than seven pages of this interesting matter.—*U. S. Mining Journal, Railroad and Financial Advertiser, New York.*

MINING AND SCIENTIFIC PRESS.—This well conducted journal has entered upon its ninth volume. It it a sterling periodical, and deserves encouragement.—*Territorial Enterprise*

New Mining Notices.

Ashland Mining Company, Moss Lode, Colorado Mining District, Arizona.

Notice is hereby given that at a meeting of the Board of Trustees of said company, held on the 16th day of November, 1864, an assessment of 50 cents per share was levied upon the capital stock of said company, payable on the 17th day of December, 1864, in United States gold coin, to the Secretary, at his office, No. 613 Montgomery street, San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday the 17th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday the 3d day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

GEO. T. KNOX, Secretary.

Office, No. 613 Montgomery street. nov19-21-4

POSTPONEMENT.—The advertisement of stock delinquent on the above assessment is hereby postponed until Saturday, December 17th, 1864, and the sale thereof until Saturday, December 31st, 1864. By order of the Board of Trustees.

21-4 J. WARREN CLARK, Secretary.

Notice.

THE Annual Meeting of the Stockholders of the Colorado Silver and Copper Mining Company (Arizona Territory), will be held at the Company's office, No. 528 Clay street, San Francisco, on Monday, December 26th, 1864, at 3 o'clock P. M., for the election of Trustees, and the transaction of any other business that may properly come before it.

21-4 B. W. MUDOE, Secretary

St. Clair Consolidated Mining Company, Smoky Valley District, Reese River, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of November, 1864, an assessment of one dollar per share was levied upon the capital stock of said company, payable immediately, in United States gold coin, to the Secretary.

Any stock upon which said Assessment shall remain unpaid on Saturday the 17th day of December, 1864, will be advertised on that day as delinquent, and, unless payment shall be made before, will be sold on Saturday the 31st day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

AUG. KUNAST, Secretary.

Office, No. 540 Washington street. nov19-21-4

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—EDS. PRESS,

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs. Wallace, Allen & Hardynge. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY, Agent, Government House, San Francisco. 15-tf

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feel it our duty to warn such parties of this error, and herewith append that section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

By the above extract it will be clearly seen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

THERE is an increasing demand for our Government Bonds in Europe. The city article of the London *Times* of the 5th of October says:

"The advices from Frankfort state that the recently awakened anxiety regarding the safety of United States bonds has in a great degree subsided, and that some large orders from Northern Germany have cleared the markets of the amounts hanging upon it. A revival of prices has accordingly taken place, although there are continuous sales on Dutch account and by parties receiving fresh parcels from New York. Altogether, the business of the last few days has been very important, a great many small orders for investment having been executed. So sanguine are the operators, that for the call of these bonds at present prices a month hence 2¾ per cent. had been paid."

This news, confirming previous reports of the favor with which American investments are regarded abroad, indicates a growing confidence among foreign capitalists as to the ability of this country to carry the war to a successful issue and to meet all the obligations incurred. If the real strength and matchless resources of the United States were better understood abroad, all doubts would be quickly resolved, and American securities would become the most popular, as they are the surest, of paying investments.

A COMMERCIAL house in Birmingham, which is concerned in the manufacture of idol images for China and India, recommends its wares to its customers in the East as follows: "Yamen, the god of the dead, in fine copper, embossed and very tastefully wrought. Rirondi, the prince of demons, splendidly designed; the giant on which he rides is of a perfect model, and his sword is of a modern pattern. Varoni, the god of the sun—a brilliant piece of art; his crocodile is of copper, and has a silver tail. Bourberen, the god of wealth; this god is of superior workmanship—the manufacturers have expended upon it their best skill. Also, other small demi-gods and inferior divinities, a very large assortment. Credit will not be given, but a discount made for cash payments."

Advertising Circular.

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEES and SHAREHOLDES, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by one half than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Our rates are uniform as well as moderate. Advertisements will be taken from the forms and printed on slips or as circulars, for sending personal notification to stockholders, whenever desired, at $1 per hundred.

9th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

10th. Blanks for filling out advertisements of assessments or notices of sale are furnished gratis. Our rates of advertising, and any other information desired, will be freely given upon application at the office.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

DEWEY & CO.,

Publishers of the Mining and Scientific Press, Nos. 11 & 56 Government House, Corner of Washington and Sansome treets, San Francisco.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office.

Bound Copies for Sale.—Bound copies of Volume VIII, complete, of the MINING AND SCIENTIFIC PRESS, from January 1st to July 1st, can be procured on application to the office.

KELLOGG'S PATENT

IMPROVED NEWBURY

PRINTING PRESS.

This New, Cheap, and most Desirable

JOB PRINTING PRESS

Can now be seen in operation in San Francisco, at the office of the MINING AND SCIENTIFIC PRESS, corner of Washington and Sansome streets.

Kellogg's Improvement

is the addition of a very simple, but ingenious and effective method of self-delivering of the cards or printed sheets from the Newbury Press.

It costs less, weighs less, and prints faster than any of the ordinary Job Presses now in use. Any Journeyman or Apprentice, who understands working the Washington handpress, will have no difficulty in operating this machine.

As a Cheap and Simple Press, for small Printing Offices in the interior, it highly recommends itself.

Address, **L. M. KELLOGG.**

INVENTORS AND INVENTIONS.—Let us not cheapen inventions, but be kind to the inventors; beware of killing the goose that lays the golden egg! Many inventors die before the hour of triumph; others falter by the way. Inventing is a struggle, a conflict, almost a battle; if the victors are rewarded, the dead are honored and the wounded carefully attended to. Glorify the inventors who succeed; cover with an indulgent self-respect the faults of those who fail; and soothe the last years of the wounded—those invalids of industrial science who have known only the pains of the fight, and always remained ignorant of the joys of victory. —[Dumas.

Mining Notices--Continued.

And in accordance with law, and an order of the Board of Trustees, made on the 5th day of October, 1864, so many shares of each parcel of said stock as may be necessary, will be sold, at the salesroom of Maurice Dore & Co., 327 Montgomery street, San Francisco, on the 21st day of November, 1864, at 12 o'clock A. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

V. B. POST, Secretary.

Office, Room 15 northeast corner Monigomery and Jackson streets, San Francisco, 19-3t

Bay State Gold and Silver Mining Company.

Turnback District, Tuolumne County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 9th day of November, 1864, an assessment of 25 cents per share was levied upon the capital stock of said company, payable on the 16th day of November, 1864, in United States gold coin to the Secretary, at his office.

Any stock upon which said assessment shall remain unpaid on Saturday, the 10th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 27th day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. F. HARRIS, Secretary.

Office, S. E. Corner of Second and Howard streets, San Francisco. nov12-20-4

Crown Point Ravine Gold and Silver Mining Company, Gold Hill District, Nevada Territory. Office, Nos. 8 & 10 Government House, corner of Washington and Sansome streets, San Francisco.

Notice is hereby given that the Annual Meeting of the Stockholders of the Crown Point Ravine Gold and Silver Mining Company, for the election of Trustees for the ensuing year, will be held at the office of the Secretary, on Monday, November 21st, 1864, at 2 o'clock P. M. of that day.

oct29-18-td J. M. BUFFINGTON, Secretary.

Citizen's Coal Mining Company, Mount Diablo District, Contra Costa County, Cal.

Notice.—There are delinquent, upon the following described stock on account of assessment No. 9, levied on the 20th day of August, 1864, and No. 10, levied on the 14th day of October, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

And in accordance with law and an order of the Board of Trustees, made on the 14th day of October, 1864, so many shares of each parcel of said stock as may be necessary will be sold, at the salesroom of Maurice Dore & Co., No. 327 Montgomery street, San Francisco, on the 26th day of November, 1864, at the hour of 12 o'clock, M., of said day, to pay said delinquent Assessment thereon, together with costs of advertising and expenses of sale.

E. J. PFEIFFER, Secretary.

20 Office, S. W. Corner, Post and Dupont Sts.

POSTPONEMENT.—The above sale is hereby postponed until Saturday, December 3d, 1864.

21 E. J. PFEIFFER, Secretary.

Evening Star Gold and Silver Mining Company, Trinity District, Humboldt County, Nevada.

The Annual Meeting of the Stockholders of the above company, for the election of Trustees to serve for the ensuing year, will be held at the office of the Company, No. 710 Sansome street, on Saturday, the 3d day of December, 1864, at one o'clock, P. M. By order of the Board of Trustees.

20-3 N. DUPERU, Secretary

Good Hope Gold and Silver Mining Company, Alpine District, Alpine County, Cal.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 1st day of November, 1864, an Assessment (No. 4) of twenty-five cents per share was levied upon the capital stock of said Company, payable on or before the 28th day of November, 1864, in United States Gold and Silver Coin, to the Secretary, at the office of the company in San Francisco, or to HENRY MORRIS, in Markleeville. [*Delinquents will be held for accruing costs after the 28th of November.*]

Any Stock upon which said Assessment shall remain unpaid on Saturday, the 3d day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 17th day of December, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

PRESTON MORRIS, Secretary.

Office, No. 526 Montgomery street, San Francisco. [19-4t

Gobernadora Silver Mining Company, San Antonio District, Lower California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 1st day of November, 1864, an Assessment of $1 per share was levied upon the Capital Stock of said Company, payable on the 5th day of November, 1864, in United States gold coin, to the Secretary, at the office of the Company.

Any Stock upon which said assessment shall remain unpaid on Saturday, the 3d day of December, 1861 will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 17th day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees

C. W. HAYDEN, Secretary.

Office, No. 522 Montgomery street, San Francisco. nov5-19-4

Jessup Copper Mining Company, Located at Curtis' Old Rancho, Towuship No. 8, Calaveras County, California.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 4th day of October, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Louis M Hickman	35	35	$14 00
Louis M Hickman	36	60	20 00
Louis M Hickman	37	54	20 00
Louis M Hickman	38	15	6 00
Wm Graham	45	150	60 00

And in accordance with law, and an order of the Board of Trustees, made on the 4th day of October, 1864, so many shares of each parcel of said Stock as may be necessary, will be sold at the auction room of Jerome Rice & Co., No. 327 Montgomery street, (now Maurice Dore & Co.) San Francisco, on the 28th day of November, 1864, at the hour of 12 o'clock, M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

RALPH EMERSON, Secretary.

Office, No. 640 Clay street, San Francisco. 20

ENLARGED.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Keokuk Gold, Silver and Copper Mining Company, Location, Clayton Mining District, Contra Costa County, Cal.

NOTICE.—There are delinquent upon the following described stock, on account of Assessment levied on the 4th day of October, 1864, the several amounts set opposite the names of the respective Shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount

W. L. KIRBY, Secretary.

Office, Room 8, No. 611 Clay street, San Francisco. nov5 19-4

"MINING AND SCIENTIFIC PRESS."—This excellent and valuable paper has been enlarged by the addition of sixteen columns. It is one of the most complete and interesting mining journals in the United States.—*Daily American Flag.*

RETURNING TO THE STATES—NOVEL WAY OF TRAVELLING.—For the last few weeks, says the Salt Lake *Telegraph*, we have heard of immense numbers of persons returning to the Eastern States, from the northern mines, many more favored with this world's pelf, have passed through this city; the mass have gone onward by the nearest cut "across lots," towards the Platte River, and now we hear of them going down the Missouri. The Montana *Post* of the 1st November, says: "In a few days fifteen boats will leave Fort Benton for the States. These boats are made bullet-proof, with double sides and port holes. Each boat will carry fifteen passengers, and will be propelled by oars through holes cut in the sides. The oarsmen will be entirely out of sight, and the pilot will have a bullet-proof house over the tiller. The precautionary arrangements are rather indicative of the times, and no doubt intended as preservatives against red skins and guerrillas.

Notice.

THERE will be a Meeting of the Stockholders of the Salamander Gold and Silver Mining Company, at No. 35 Metropolitan Block, on Monday the 21st inst., at 7 o'clock P. M. By order of the President.

21-1 F. D. GALLAGHER, Secretary.

Mining and Scientific Press Patent Agency.

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be witheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved: if the invention has been in part patented, the applicant will be enable to modify his claims with a view to obtaining as many of the other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or unwise decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, prescuting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the invention shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles, Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented: likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judges, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

FROM SANTA CATALINA ISLAND.—A lot of copper and silver ore from Catalina Island, which arrived in this city some days since has been assayed and sold. The copper was from the Yellow Jacket, about one and a half miles from the landing, 16¼ per cent. The vein varies from three to four feet in width. The silver ore assayed $97 to the ton; it was from the Ne Plus Ultra mine, located about two miles from the landing, and averaging about six feet in width. The companies owning the lead mines, in the N. E. portion of the island, are exhibiting an increased energy in developing and working their ground. Twenty-five tons of ore were recently received in this city, on which $60 per ton was advanced, for shipment to Europe.

A CITIZEN of Washington has sent one hundred dollars to General Grant to be given to the man who first unfurls our flag in Richmond.

IMPORTANT MINING SURVEY.

It was announced, a short time since, that a party eminently qualified for the task was about to originate a thorough survey of the Comstock lode and the ground immediately adjoining. The survey is intended to be a very complete one, and will embrace general linear surveys of each mining district, as also underground surveys of the several mining claims now working, and such of those at rest as may solicit notice. The trend or course of each ledge on the surface will be delineated. The location of such claim, and the contour lines best adapted to reach it economically, will be shown where required, and any special notice sought for which does not militate against the general design, will be attended to. It has long been a matter of much surprise that nothing of the kind has been attempted ere this. Such a survey, if properly carried out by a party of acknowledged ability, would accomplish much good in giving confidence to foreign capital and attracting it bither for investment. To bring about such a result it is necessary that the information desired must come from parties, who will be fully accredited in Europe, as men of reliability and judgment. The unrivalled silver mines of our neighboring State have not yet been properly introduced to the foreign capitalist. To do so it is necessary that they be exhibited in connection, as well as in detail, that it may be seen at a glance how closely they interlace our hills and vales in continous belts, whose courses, however sinuous, are still evident to the eye of the scientific and practical man. It is to be hoped that no efforts will be spared to have the work properly carried out. It appears that our friends over the mountains have a party now among them, accredited by the savans of Europe, willing to do the work, provided the companies will advance the necessary means for the surveys, etc. It is to be hoped they will not allow this work to fall through, by giving it a cold shoulder. The entire amount asked is $12,000, which, among the companies, would be but a trifle to each.

CARMEN ISLAND MINES.—We have been allowed the perusal of a private letter received in this city accompanying a shipment of five tons of copper ore, estimated to contain from 50 to 60 per cent. of copper, besides a large percentage of silver. The writer has had an experience of some fourteen years as a miner, some seven of which he has spent in the silver and copper mines of Mexico, and remarks that he prefers Carmen Island as a mineral district to any which he has seen in Mexico or on the Peninsula of Lower California. He adds: "The facilities for shipping will in no case be more than three miles from a point of embarcation." The ore alluded to above came from within one mile of the embarcadero. It will be smelted in this city.

OBITUARY.—We regret to announce the death of Mrs. Chenery, wife of Richard Chenery, Esq., who died at the Sick Home, in this city, on Wednesday, 23d inst. Mrs. Chenery was a very estimable lady and leaves a large circle of friends and acquaintances here as well as in the East, to mourn her loss.

Spontaneous Combustion.

The Orientals say of fire, a little is life, a great deal is death. It is the mighty agent of material transmutation. Its sources are everywhere. An old chemist declared that a "nitrous spirit" exists in the air, which dissolves bodies susceptible to its influence. Oxygen is the great supporter of combustion, and oxygen comprises one half of the earth's crust. All minerals are burnt compounds. Water extinguishes fire, yet water is composed of eight parts of oxygen and one of hydrogen, and hydrogen is the most inflammable of bodies, and was once supposed to be the matter of heat. Water is even formed through the agency of fire, the union of the two elementary gases being an instance of true combustion. Water is a fire producer as well as fire extinguisher, and in some instances increases the destruction when applied to burning buildings. The metals, potassium and sodium take fire when brought in contact with cold water. Says Sir Humphrey Davy: "Give me accumulations of potassium or sodium, or other analagous metals in the bowels of the earth, and let the waters of the sea descend to them, and all the phenomena of the volcano and the earthquake may be produced." It is well known that sulphuric acid and water mixed cause great heat. Hot saltpetre (nitrate of potassa), and nitrate of soda, but deflagrate at certain temperatures, when the application of water will cause explosions. Such is also the case with common culinary salt.

Chemistry does not yet explain the production of heat, but the old-time mystery of spontaneous combustion is partially cleared up by the present well understood liability of certain bodies, to develop heat enough to set them on fire, while undergoing natural chemical changes. As this matter is of practical and general importance, we cite here the most common cases of such combustion:—

Cloths, Waste and Oils.—The saturation of cotton, tow and waste is a frequent source of spontaneous iguition. Recently expressed fixed oils are particularly disposed to oxidize when exposed to light and air.

Experiments prove that cotton saturated with linseed oil will inflame in two hours. The rags used by grainers and any cloths about paint shops may generate fire; so may canvas painted with white lead and oil or varnished, dried in the sun, especially when piled together. Wool and wood saturated with flaxseed oil are liable to ignite also; ditto saw dust.

Mineral Oils.—Some mineral oils give off explosive vapors at atmospheric temperature.

Bituminous Coal and Iron Pyrites.—Bituminous coal lying in large heaps has at times ignited through the decomposition of associated sulphuret of iron. Rapid oxidation of iron fillings and turnings has produced great heat; fully enough to inflame combustible material.

Wet Merchandize.—We have already hinted that water may be an incendiary. Bran and ship stuffs when wet and confined evolve great heat.

Packages of coffee wet and confined have taken fire.

Several ships are known to have been burned from having wet cotton on board.

The heat evolved by lime when wet is intense; very dangerous when confined; frequently burning boats and leaky warehouses. During the great gale of September, 1860, the waters of the bay were driven up into the city of Mobile so as to cause a great overflow, reaching warehouses where lime was stored. A fire resulted, which consumed about a half million of dollars worth of property.

Haystacks and ricks of grain have given rise to spontaneous combustion when harvested too green, or during wet weather, and laid in, in large bodies. Feed stores, mills, warehouses, elevators, grain cargoes, barns and all other depots of masses of produce are more or less involved in this hazard.

Wood Ashes.—There are well authenticated cases on record of fire existing in piles of old ashes. Combustion has commenced in ashes which had remained undisturbed for two years. Repeated experiments have proved that wood ashes having linseed oil spilled upon them will ignite in from twenty-four to forty-six hours, and continue to burn for a half day.

Drugs, Chemicals, Etc.—Many compounds in daily use among apothecaries and chemists are known to evolve heat. The absorption of oxygen by spirituous liquors, in becoming ascetic acid, creates heat. Phosphorus will take fire in the open air when the thermometer reaches one hundred degrees. Pyrophorus (a compound of alum, pearlash and lamphlack,) ignites upon exposure to the air and explodes upon the slightest friction. Alcohol and water mixed evolve heat. Almost any acid spilled upon almost any metal not only evolves heat but generates inflammable gasses.

Lampblack in casks has been known to ignite on shipboard. Lampblack, or even common soot, dropped upon phosphorus in the open air ignites almost instantly. Lampblack in common oil putty was the undoubted agent in the destruction of a large Cincinnati furniture manufactory, a few years ago. Charcoal powdered and piled in a heap is liable to spontaneous combustion.

Parched Rye Bran.—Experiments have shown that parched rye bran, wrapped in linen clothes, smoked in a few minutes, and soon burned through the cloth.

A cask of oatmeal, left standing in a kitchen for three months, took fire spontaneously, and was totally consumed, with the barrel.

Dried hops were put in a cotton sack and laid on a pile of cotton seed, and after lying three months they inflamed.

Stable Manure.—Many occurrences, not otherwise explainable, lead to the conclusion that stable manure will burn spontaneously. Its chemical contents favor the supposition.

Solar combustion.—Several instances of this have been reported. Some German friction matches will take fire in a clear hot sunshine. —*American Exchange and Review.*

Mining in Great Britain.

Great Britain, the leading metal-producing nation of the globe, as regards copper, tin, lead and iron, present facts and experience in connection with the working of lodes and reduction of ores, ever interesting and suggestive to metal and mineral seekers the world over. Her mining history begins far back in the past. The Phœnicians, in the day of their commercial grandeur, exchanged their manufactures for the tin of England, and the Romans mined for gold in Wales.

Notwithstanding her extensive manufacture of iron, the United Kingdom is deficient in good iron ores. Her copper mines are confined mainly to the southwestern point of the island, embracing the counties of Cornwall and Devon. Copper and tin are found in the same veins together; in one district copper will prevail, and in another tin, and in a mine worked for tin greater depth may reveal a prevalence of copper. Long before the value of the copper was suspected, the granite and the porphyry of Cornwall were worked for tin. The lead districts are classified as follows: Devon and Cornwall Northern Counties, Shropshire, Ireland, Scotland, South Wales, North Wales and the Isle of Man. In the northern counties are the richest lead deposits. In three districts of England the mountain limestone is productive of lead, zinc and copper.

Thirty years ago, England supplied 50 per cent. of the annual copper production of the globe, and in 1857 more than 20,000 tons of the metal. The metallic product of the Cornwall and Devon ores is between 6 and 9 per cent. Other mines give a higher average per centage of metal than these.

A century ago, the tin mines of Cornwall and Devon yielded about 1,500 tons a year, and since 1820 the yield of each decade has been augmenting. At present, however, Cornish tin mining is injuriously affected by the price of the metal. At most of the mines, tin cannot be raised at less than £70 per ton, while it is selling at £60. To prevent such reduction in price, it is proposed to have public sales, as in the case of copper.

There are now in the United Kingdom 63 mines paying dividends from the profits; Cornwall contains the greatest number of these. These mines produce various ores—gold, copper, lead, tin and iron. Some are worked only for one of these substances; others for two or or more. There is but one mine which makes profits from yield of gold—the Vigra and Clogan, situated in Wales, and which is also worked for copper. Upon an outlay of £16,800, or £4 per share, this undertaking has declared dividends of £25,725, or £6 2s. 6d. per share.

The copper mines show but 18 of their number on the present dividend list; of these, 13 are in Cornwall, viz: Clifford Amalgamated, East Basset, East Carradon, Marke Valley, North Treserkby, Par Consols, South Carradon, South Tolgus, South Frances, West Basset, West Damsel, West Steton, and Basset; in Devonshire, 2, Bedford United and Devon Great Consols; in Cheshire, 1, Alderly Edge; in Anglesea, 1, the Parys Mines; and in Ireland, 1, the Wicklow Mines. These mines, upon aggregate outlay of £279,843, have declared dividends of £2,702,437, the several counties contributing in the following proportions: Cornwall, with 13 mines, has paid £1,580,295, on £229,986 expenditure; Devonshire, 2 mines, £988,212, upon £10,357; Ireland, 1 mine, £101,850, upon £17,500; Anglesea, 1 mine, £20,500, upon £10,000; Cheshire, 1 mine, £11,589, upon £12,000.

These figures show a return on the invested capital of £965.60 per cent. In the case of some companies the profits may be characterized astounding. By the twentieth annual report of the Devon Great Consols Mines, it appears that with an original outlay of £1,024—£1 per 1,024 shares, into which the mine was divided—the quantity of copper ore returned during the twenty years' working amounts to 397,396 tons, which realized £2,345,993. Of this there has been paid in dividends £912,384, or nearly £900 per share; and as shares are now quoted at about £600, this will make a return of nearly £1,500 per share for an original outlay of £1. The greatest quantity of ore returned in one year was in 1857, when 28,836 tons were returned, in which year also the greatest amount of money was realized, reaching £159,432. The largest amount paid in dividends in one year was in 1846, when £72,704 were divided. During the past year 26,834 tons of ore were sold, realizing £130,175. The amount paid in dividends was £56,320, being £55 per share. The ore reserves in the mines are estimated at 72,171 tons, which at the average price realized by the ores sold during the past year would give a money value of over £350,000.

The South Caradon, upon £640 expended, has declared dividends of £224,512, equal to 35,080 per cent., or £350.80 for every £1 embarked. South Frances, upon an outlay of £9,373, has returned £183,855, equal to 1,957 per cent.; and Basset, upon £2,624, only, expended, has declared dividends amounting to £307,200, or 11,707 per cent. All these undertakings continue to pay well, but there are certain mines which have proved exceedingly profitable, but are now abandoned, or have discontinued the payment of dividends during the extension of the works or machinery. Among these the Tresavean, which returned £4,677 7s. per share upon an outlay of £32 10s., or equal to 1,439 per cent. upon the capital embarked; and Buller, which, upon an expenditure of £5 per share paid dividends of £929 per share, equal to 18,580 per cent., are prominent examples of successful mining.

Nine mines worked for both copper and tin at present pay dividends; these are all in Cornwall. They are the Boscaswell, Botallack, Carn Brea, Dolcoath, Drake Walls, East Pool, Great Vor, Seton and Tincroft. Upon aggregate outlay of £430,641, these mine properties have declared dividends of £880,848, equal to a return of 204 per cent. on the capital embarked. The most profitable of the above named undertakings have been the Botallack, which, upon an expenditure of £18,250, or £91 5s. per share, has divided amongst the shareholders £95,550, or £477 15s. per share, equal to 523 per cent.; Carn Brea, which has returned £380,500, upon £15,000 outlay, or equal to 1,870 per cent.; Dolcoath, £270,827 dividends on £46,137 expended, equal to 587 per cent.; and East Pool, £46,784, dividends, upon £3,104 outlay, equal to 1,507 per cent. upon the capital employed. Of mines producing copper and tin, which have been profitable, but are now paying dividends, the following are the most important: Condurrow, which upon £45 expended per share, has made profits of £85 per share, or 188 per cent.; and Levant, which has paid dividends of £174,560, upon £400 outlay, equal to the enormous return of 43,640 per cent., or £43,640 for every £1 invested.—*American Exchange and Review.*

Rivot's Mode for Working Pyrites.

Since the working of the Morning Star ore, which resulted so favorable—$60 per ton, our citizens have manifested much interest as to the manner and process by which it was worked. We are now enabled to gratify their laudable curiosity. It was worked at the instance of Messrs. Wade, Schetter & Jones, proprietors of the Pioneer Quartz Mill, of this city, at the Brunswick Furnace, Empire City, Nevada, by "Rivot's Patent" for decomposing sulphides in ores, and freeing gold and silver contained in them, and for the elimination of sulphur and other volatile substances which prevent, by their presence, the amalgamation of gold and silver with mercury. The decomposition of the sulphides is effected in a furnace differing but slightly from an ordinary reverberatory furnace except that the bridge wall is higher, and the arrangement of the flues such as to conduct the flame and heated air from the furnace, along the arch, and prevent its contact with the ore, thus leaving a space between the surface of the ore and the strata of flame for the accumulation of the vapors of sulphur and the volatile metals which are formed. After the furnace has been charged, and the temperature raised to the proper point (a dull red heat), jets of steam are introduced into the space between the heated ore and flame and by its decomposition gives rise to a current of oxygen and hydrogen gases in their nascent state; these combine with the vapors of sulphur, arsenic, antimony, etc., and form gaseous compounds, which are carried off by the draft while the oxygen combines with the fixed metals present, converting them into oxyds, but the gold and silver, having but very slight affinity for oxygen, are left, after the chalcination of the sulphur, with which they had been combined, in a free state. The process is founded upon the fact that hydrogen, in its nascent state (that is the peculiarly active state in which it exists when first freed from combination), or at a high temperature has a powerful affinity for sulphur, arsenic, antimony, etc., and forms with them gaseous compounds, which are carried off by the draft. The sulphur forming sulphurous and hydrosulphuric acid gases, and the arsenic and antimony forming similar compounds with the oxygen and hydrogen, equally volatile, are gradually eliminated until, when the process is completed, no trace of them exists in the ore, which is then said to be roasted *dead*, it is then removed from the furnace and amalgamated by the ordinary process.—*Alpine Chronicle.*

Boiler Explosions and their Prevention.

An important letter upon this subject has been addressed to the editor of the London *Times* by Mr. Joseph Hopkinson, of the Britannia Works, Huddersfield, in which he points out the disadvantage of official inspection, whether conducted by the government or by commercial associations. He maintains that many boiler explosions have taken place from the interference of the inspector. He admits that inspection may be the means of lessening these catastrophes, but considers that the class of inspection required must greatly differ from the system carried out by the Manchester Association, which he avers is not only retrograde in its tendency, but is a positive evil. It throws the responsibility into the lap of an irresponsible body, who have merely made boiler explosions a game of speculation. His experience with these societies proves the remarks made by Mr. Jewison, coroner for the Leeds district, that it is "A system by which boiler owners are lulled into fancied security." He continues, that he would ask these societies how many explosions have taken place of boilers under their charge, and how many persons injured, which would have been prevented had there been a proper valve? how many fusible plugs they have found inoperative? and why that apparatus is recommended by one of the Manchester associations, and condemned by the other? and after the report made by the Franklin Institute, declaring its inefficiency, from experiments made. He would ask them why they recommend twice as many fittings to a boiler as is necessary? why they would have so many holes pierced in a boiler for the adoption of the various "philosophical toys" they recommend? He observes that the operative engineers of Oldham and neighborhood adopt a very different course to that pursued by the Manchester Association, which is by the formation of an institution, where lectures and information on matters relating to the steam engine and boiler are imparted to them, and they choose a large body of men of sufficient experience from their own society, who act as inspectors for their neighbors' boilers. The result has been, by this spirit of self-government and the adoption of proper fittings, that not one explosion has taken place—a very different result to that of these great companies, seemingly got up under more favorable auspices. The officialism of red tape and indifference, as well as the payment of useless salaries, is avoided, whilst the results are far more conducive to the interests of society. Some parties, however, adopt a different course to that pursued either by the Manchester Association or the engineers of Oldham, and which they say is preferable to any yet devised. The method is, by agreeing with a practical boiler maker to examine the boiler thoroughly, whenever called upon, at a fixed sum per boiler examination; and should he succeed in discovering any faulty place he is entrusted with the repairs. Mr. Hopkinson's conclusions are, that the only safeguard against boiler explosions is to be found in efficient self-acting mechanical contrivances, and declares that boiler explosions can be prevented from all causes except that of a boiler where it is too weak to withstand its ordinary working pressure; and he is prepared to attach to any boiler in London, or elsewhere, apparatus such as are in use upon the boilers at the Royal Arsenal, Woolwich, and upon the boilers of Messrs. John Brown & Co., armor-plate manufacturers, Sheffield, 42 in number, and 33 at Messrs. Crossley & Co., Halifax, and the whole of Messrs. Naylor, Vickers & Co.'s boilers, Sheffield; in fact, to 4000 boilers in this and other countries; and he offers £200 to any person who can demonstrate the possibility of exploding a boiler from over-pressure of steam, or deficiency of water, if the boiler be fitted with this patent compound safety-valve, the warnings of which, if disregarded, put a stop to the working of the engine, and render boiler explosions impossible; and what is still of great importance, its action can be stopped only by again supplying the water to the boiler.—*London Mining Journal.*

In 1860 petroleum oil was unknown in France; in 1861, 40 casks were sent there as a curiosity; in 1862, 3,994 casks were sent there as an experiment; in 1863, the demand there brought 29,197 casks, and this year, so far, 56,672 casks have been sent to Marseilles.

Mining Summary.

CALIFORNIA.

In Siskiyou, says the *Journal*, the miners in various localities are making much preparation for winter. Huge piles of drift dirt have been taken out, and the miners are still continuing to keep up the pay dirt.

Nevada.—The Virginia *Union* of the 15th instant is informed by Mr. F. S. Picking, direct from the Excelsior district, in the extreme eastern portion of Nevada county, that the Excelsior company located in that district are yielding very rich ore, some of which will yield from $6,000 to $10,000 to the ton. These mines have recently been opened—are situated upon the summit of the Sierra Nevada Mountains, near the boundary line between California and Nevada—and in the vicinity there is an abundance of wood and water for mining purposes. Although the winters are severe in that region, the company have laid in their stores for the season, and expect to prosecute work upon the mines without interruption. In the spring, it is contemplated to erect several mills. Those interested in the enterprise think they have got "a good thing," and it looks that way now.

The Nevada *Transcript* of Nov. 16th, says that the claim of John Hickey, at Moore's Flat, is paying weekly from $3,000 to $8,000. This claim is one of the best in Nevada county, and has been paying big dividends for several years past, and the prospect is, it will take a good many years more to exhaust it.

The *Union*, of Grass Valley, says of the "King Bee Ledge," the supposed northerly extension of the French lead, that it has now been followed about forty feet below the surface and shows better and better all the way down. There are distinct walls, foot and back. It is about eleven feet thick, of well defined quartz. Gold is seen in it, and all the tests indicate paying rock. The lucky owners are in high glee, and are making preparations to raise a large amount of rock for crushing.

Plumas.—The Quincy *Union* has the following:—"Some time since the Spanish Peak Gold and Silver Mining Company filed articles of incorporation. The company was formed for the purpose of prospecting and mining near Spanish Peak, in this county. The company has been at work sinking a shaft for some time past, and struck pay dirt a few days since. The company feel certain that they have found some of the richest mining ground in the country. Hundreds of claims have been staked off on both sides of the company's ground. We have no doubt but that it will prove to be one of the most extensive mining localities in this State.

Cummings & Co's claim at Dutch Hill is paying hugely. The company took out one hundred ounces of gold for one week's work, a short time since. The claim has averaged over fifty ounces per week for the last month. Morris & Co's claim on the North Fork is paying an ounce per day to the hand.

We learn that Firmstone & Co., who have been at work for some time past sinking a shaft on the flat, about one mile north of Spanish Ranch, have found gravel which prospects as high as one dollar to the pan.

Bidwell & Co's mill (11 stamps) at Greenville recently cleaned up one hundred and ninety ounces of gold, for a run of thirty-six hours. The rock crushed was taken from the McClellan ledge.

Cummings & Co., at Dutch Hill, took out $300 for last week's work. They found one piece of pure gold which weighed seventeen and three-fourths ounces; and several other "chunks" weighing from one to four ounces. Julius & Co's claim is paying about one ounce per day to the hand. The dirt is "toted" in a hand cart one quarter of a mile, and then washed in a "rocker."

Six hundred and fifty-one Foreign Mining Licenses were sold in this county last month.

The owners of the Drury quartz ledge, near Greenville, have sunk a shaft upon their ledge to the depth of seventy feet, and find that the quartz prospects better the deeper they go. They are now taking out rock which compares favorably with the quartz taken from the McClellan ledge, and will pay as high as $2,500 to the ton.

A. B. Harvey has been appointed Superintendent of the Buckeye quartz mills, near Greenville, vice L. G. Traugh, Esq.

Messrs. Byers & Co's quartz mill, at Jamison Creek, will commence running next week.

WASHOE.

The improved prospects of the mines in Virginia and Silver cities, heretofore noticed, still continue. The dark cloud of litigation and reckless speculation is fast passing away, and in spite of the cases of unfortunate and injudicious operators the mines of Virginia will soon regain a sure and substantial footing. Important developments are almost daily reported all along the line of the Comstock lead, and despite the occasional growl about dull times, and depression in the stock market, we still look for an early season of renewed prosperity. Sales of stock are already beginning to be more frequent. The water in the Ophir and Central are fast disappearing, and much interest is felt as to the developments that will be found when the workmen can once more reach the point in the former mine, from whence they were so unceremoniously driven by the late influx of water. All are hopeful, and the owners of the Central, White & Murphy and California are watching the progress of matters in that locality closely.

The Burning Moscow Company have recently struck some very rich rock, containing black sulphurets of extraordinary richness. Specimens are obtained worth almost their weight in silver—silver wire is also found. These specimens were taken out of a large deposit, such as are frequently found in the Comstock lode. The superintendent has sent two tons of the ore to San Francisco, for reduction or as samples of what the mine yields. The title to this mine is still in litigation, consequently its stock remains at a comparatively low figure in the stock board.

The Best & Belcher are still drifting, and with increased prospects of finding good ore. The Ophir mill is working about 100 tons of ore per day, and the superintendent claims that he will take out at least $75 per foot for the present month. It is to be hoped that the Directors may be able to save enough out of this amount to declare a dividend on the first of December.

The Savage is constantly improving. The ore in the bottom of the 100 foot shaft of the Gould & Curry looks well. The Yellow Jacket bids fair to become one of the most valuable mines on this range. The Imperial never looked better than now. They will soon be able to run their 54-stamp mill on the Carson. The Empire has struck another body of good ore.

REESE RIVER.

The quartz miners of Reese River are making extensive preparations for the winter's work, in getting tunnel timber ready, etc. The tunnels are now affording a large supply of water, and a stream is almost constantly flowing down Cedar ravine. Many other mines in that vicinity will be sunk upon below the water level this winter, which will largely increase the supply, and will be sufficient, if pipes are laid, to run all the mills in the canon. We condense the following from the Reese River *Reveille*:—

Extensive improvements are being made to the Buel North Star Company's works. This is now considered one of the best claims in Reese River. It is under the superintendency of Mr. John Kurtz. The Eureka Mill is constantly engaged in crushing rock from this mine, which is said to average fully $800 to the ton. Three tons of rock was recently crushed from the Ethan Allen claim with a yield of $350 to the ton. The shaft is now down 120 feet. Twenty-five tons are all ready and are probably crushed by this time. They expect soon to be able to take out as much rock as will keep up a constant supply for one mill.

The Hubbard ledge, a recent location, is now being worked with vigor. Three tons of ore recently worked, yielded $1.800. The company will soon be able to raise a large amount of rock.

Mr. Booth, and two others recently located a claim on Central Hill, some of the surface ore has yielded as high as $2,000 to the ton. The owners are first-class miners and intend to prosecute the work of development with energy.

The Diana ledge is now worked as a first-class ledge. The mine is under the superintendency of David E. Buel, an energetic and persevering miner, who is prosecuting the work of development in a most satisfactory manner.

The machinery for the Midas mill, in Telegraph Canon, is fast arriving upon the ground. Three wagon loads arrived on the 8th instant.

The Foster ledge, situated on Central Hill, is now worked with renewed vigor. A. H. Wilson the superintendent, manages the affairs of the company judiciously. They had some rock worked a few weeks since which yielded at the rate of $1,000 a ton, another lot is about ready for crushing.

Brown, Newell & Baker have just erected a two-stamp horse mill in the Third Ward. They have purchased one of Salmon's new amalgamating tubs, which is now in operation in connection with the mill. It has been demonstrated beyond a doubt that these miniature mills are paying concerns, and that they assist materially in prospecting claims and developing the country, and one of the best features connected with them is that they are not in the hands of mere adventurers, but permanent citizens and old and experienced miners and millmen. They enable persons owning mines to have small quantities of ore worked and know whether it will pay to have several tons worked at a large mill or not.

Another roasting furnace is being put up in Central Ravine, by Mr. Moses Wilson, who will connect with it a two-stamp horse mill. It is designed more particularly for prospecting work.

The Union Mill commenced running their new roasting furnaces a few days since. They were found to work most satisfactorily. The old five-stamp battery in the California mill has been taken out for the purpose of giving place to the new ten-stamp battery that the proprietors are now having built.

From Washington District favorable accounts are received. Several companies are at work with very encouraging prospects. Señor Alvarez & Co., are working the St. Helena lode, and are taking out an abundance of very rich argentiferous galena. This will be reduced in a smelting furnace, which is now in course of construction. It will be a blast furnace, with a blast furnished by a steam engine, all of which is now in place. There are now over fifty men employed and the establisment will soon be in operation. Important results are anticipated from this furnace and mine. Hirshberger & Co.'s mill has been running quite steadily of late, crushing rock for the New Hope Company with very favorable results.

From Eureka District we also have favorable reports. Quite a number of new lodes have been discovered that promise exceedingly well. About eight hundred pounds of surface rock from the Eureka lode were brought in and worked at the Clifton Mill, producing upwards of $90 per ton. The facilities afforded by abundant wood, and water power, with fine agricultural land in the neighborhood, give assurance that this district will at no distant day be one of great importance among the many of Nevada.

Speculative Effect of Siroccos from the Sahara upon the Alps.—Sir Charles Lyell, at a recent scientific meeting in England, declared that the greater part of the African Sahara has at no very distinct geological period been beneath the ocean, and the high coast of Barbary so insulated from the body of the continent, and probably in unbroken connection with Spain, Sicily and South Italy; and he illustrated his theory by explaining the the probable effect on the climate of Europe of the elevation of this vast sandy plain. The hot sirocco, he said, which, when it blows, now melts so rapidly the snows on the Appenines and Alps as to cause the most dangerous floods, and to exhibit a visible rise in the snow line even in Switzerland from day to day, attains this great heat from the burning tropical sand of the Sahara over which it passes. At the time when this Sahara was still beneath the sea, this wind would have been charged with the ocean's moisture instead of with dry heat, and on striking the Alps would have been driven up by its comparative warmth and lightness to the higher regions of the atmosphere, where it would have deposited its moisture in the form of snow, and instead of melting the glaciers have greatly increased them. This alone, Sir Charles thought, might have been sufficient to account for the Alps having been in this glacial periods as much as 2,000 feet, or, according to Carpentier, 3,000 feet higher than they are now.

The Worlds and Systems Beyond.

Astronomers tell us that the sun is 520 times larger than all the planetary globes which revolve around him, and 1,300,000 larger than our own globe. Such is the power of this luminary, that the planet Herschel is held in its orbit, lighted, and warmed by his brilliancy at the distance of 1,800,000,000 of miles from his surface. Besides the sun and the planets which revolve around him, there belong to the the same system, comets, the purpose of which is apparently inconceivable. Their magnitude and rapidity of motion are equally so. They, too, are nevertheless known to insignificant mortals to move with exact precision. One of them is, by human agency, known to be 11,200,000,000 of miles from the sun at its greatest distance, and to move at the rate of 880,000 miles in one hour, when nearest to him. The tail of the comet which appeared in 1680, was computed by Sir Isaac Newton to be 80,000,000 of miles in length.

Magnificent and glorious as the solar system may be, what is it in magnitude and distance when compared with all the numberless worlds and systems beyond it? In every clear night, the naked eye may discover nearly a thousand fixed stars, which are supposed to be such luminaries as the sun, and have their attendant planets, as we know our sun to have, it would comprise a mass of matter equal to 1,320,000,000 of globes of the size of our earth. The assistance which the human eye has obtained in extending its view into the works of Nature by artificial means, discloses to us the certainty that orbs exist at such a distance from us, that a cannon ball moving at the rate of 480 miles an hour, would require 9,000,000 of years to pass from some of them to the earth. The sun is computed to be 95,000,000 of miles from the earth; yet, in eight minutes and a quarter the light reaches the earth from that luminary. What must be the magnitude of luminous bodies, which are seen with the help of glasses at such a distance, that it would require some years for light to come from them to the earth?

It is said by some modern astronomers, that stars are seen at such a distance, that light must have left them four hundred years before it strikes our earth. Beyond all that is now known to us to exist, their may be still other systems, all of them in motion, and inhabited, it may be, by intelligent beings. Where shall the imagination fix the boundary of creation? From whatever point on the surface of our sphere the eye is directed towards the firmament, worlds on worlds, systems on systems are disclosed. Are we in the center of the universe? Are we in some remote extremity of the universe? What is the centre, what is extremity of the universe? If there be a center, if there be limits to the works of Nature, what is there beyond them, and who and what exist where Nature does not exist and reign?

But if we are astonished at the magnitude and distance of these luminaries, how much more so must we be, when we try to think of them collectively and in motion? We know that, like the substances on the earth they are held by the law of gravitation, and we know what strength it requires to move a weight of a few hundred pounds. If we could suppose our comparatively small earth to be a perfectly smooth ball on a plane, it is believed that it would require a mechanical force which no human mind can compute to give it any motion. Yet we know it moves at the rate of 68,000 miles in every hour revolving as it flies, yet so easily and surely, that we have no perception of its motion. The planet Mercury moves at the rate of 1750 miles in a single minute—a motion which may be measured by supposing a ball to pass from America to Europe in one minute and three quarters, or around our earth in seventeen minutes.—*Boston Investigator.*

General Hooker has added an aphorism to literature, which will probably live longer than his military fame. In his late orders to subordinates he announces that "No one will consider the duties of the day as ended until the duties it brings have been discharged."

Denmark, it is said, having been unfortunate in her warfare for the preservation of the Duchies, is desirous of disposing to our Government her possessions in the West Indies. They consist of three islands—St. Croix, St. Thomas and St. John.

Force of Imagination.—It is related that a man died in France, not long since, from the force of imagination. He imagined that he had been poisoned by arsenic, and died as if he had in reality been poisoned. Not a trace of poison of any kind could be found in his stomach after death.

Gen. Sully's expedition, besides doing a good deal of hard marching and severely punishing the Indians, has demonstrated the practicability of steamboating on the Yellowstone, surveyed an unexplored country, and found immense resources of heavy beds of coal lying exposed in every direction.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, Nov. 26th, 1864.

The condition of the money market is substantially unchanged. The demand from the brokers and others upon good stocks is readily supplied at from ½ to 2 ℔ cent: per month. The recent transfer of more than one-half million dollars from New York to this city, growing out of the sale of some 12,000 shares State Telegraph stock to Eastern parties, is not without some influence upon the market.

Capitalists in the East continue to send funds hither for investment, and a number of orders were received recently for the purchase of some prominent mining shares at current rates. The uncertainty attending fiscal matters at home, arising from redundant paper issues, and the constant fluctuations in gold, will, it is believed, induce many parties to transfer capital to these shores, where the rates of interest are so much more attractive, and where the currency of the country has a permanent and and stable valne, and is liable to no change.

Receipts of treasure from the interior since Saturday last have been uncommonly large, and amount to some $2,000,000. Gold bars are lower than for some time past, and are selling at about 830. Silver may he quoted at from ½ to 2 ℔ cent. premium for selected bars.

The stock market has exhibited a fair degree of animation this week, although transactions in leading shares have heen somewhat limited. Stocks of less certain value have been subjected to the usual fluctuations, but were largely dealt in.

Legal Tender Notes advanced to 49½c, then sold at 46½c (flat), 30 and closed at 47½c bid, 48c asked. $11,000 were sold at this range.

City stocks have heen comparatively steady, hut inactive. California Steam Navigation is firm at 73½ bid ; San Fraucisco Gas Co. was offered at $78 ; Spring Valley Water Works is in more favor, and hut rarely offered, owing, it is said, to the flattering prospects of the company.

California State Bonds are inquired for at $76 ; San Francisco 6's of 58 at 61, and 7's at 70 ; Sacramento county Bonds, 6's, are in request at 42½, and Marysville 10's at 60.

Savage was sold at $1,800 to the extent of 8 feet. Few or no transactions have taken place in this stock recently. Nearly every portion of the claim seems to he improving, and some favorable indications were met with this week in runuing toward the line of the Hale & Norcross. Receipts of hullion for the current month are likely to exceed $200,000, and the regular dividend of $75 per foot will he declared.

Gould & Curry has been in more favor, and 31 feet were sold, advancing from $1,510 to $1,640, declining to $1,550, seller 30, and $1,530 cash, and sold yesterday at $1.600, buyer 30, and $1,550 cash. The prospects of this company are thought to he more flattering. Above the fourth level, recent developments disclose a large body of good ore, and in drifting from the lower shaft the appearance of the vein is said to he more satisfactory. An increased dividend is talked of for the current month, but nothing has transpired in this respect as yet.

Chollar has heen well maintained, 11½ feet changing hands within a range of $1,030 and $1,050, and closing at $1,075 asked. The hoisting power of this company has heen materially improved, and is now thought to be very efficient. The lode in the south miue has heen developed a distance of 150 feet, and proves to be from 20 to 30 feet in width throughout the entire length, carrying good pay ore, averaging about $50 per ton. At present the vein is some 25 feet wide on the sourthern end and is said to look well. A prospecting shaft sunk from the 4th to 5th level in the *north* mine has disclosed some fine pay metal during the past few days. The company have about 300,000 feet of timber on hand.

Yellow Jacket was sold at $950@$925, and was held yesterday at $920. Constant employment is now given to four and five mills, and the net yield for the month will materially diminish the liabilities of the company. Washoe advices speak favorably of the future productiveness of this claim.

Potosi was dealt in at $800@$825 and closes at $825 bid. A favorable decision is anticipated from Judge Mesick, referee, in the suits of this company with the Bajazet.

Belcher is inactive hut well maintained at $750 asked. Arrangements have been made to commence hoisting ore again from this mine. Crown Point is also dull hut held with some firmness at about $750. Empire Mill & Mining Co. fell from $545@$550 to $525 per share. A dividend of $25 per share is likely to he made for the month of November.

Hale & Norcross opened at $530, buyer 30, fell to $400, rose to $475, buyer 30, and closing at $450, at which rates 23 feet were sold. No material change has taken place in the mine during the week.

Ophir has heen in better request and 32 feet changed hands, advancing steadily $410 to $475 and selling yesterday at $440.

Uncle Sam was active yesterday, and 54 feet were sold at from $210 to $195. Overman is weak at about $90 asked ; an assessment of $50 was levied on the 19th inst.

Nevada, J. G., has been very actively dealt in and 725 shares were sold, advancing from $50 to $70, buyer 30, declining to $45, then rising to $65, receding to $50 and rallying to $55.

Bullion rose to $170, fell to $160, advanced yesterday morning to $180 and then declined to $155, seller 30, and closed at $168. Some 250 shares were sold.

Imperial is in less favor and has fallen from $144 to $137½, within which range 60 shares were sold. Burning Moscow is still a feature of the market and 2812 shares have changed hands, advancing from $49 to $60, receding to $50, rising to $59, dropping to $48, rallying to $60 @$62, buyer 30, and closing at ahout $60.

Wide West has been dealt in to the extent of 440 shares, advancing from $14 to $16. An assessment of $5 was levied this week. Sheba declined from $40 to $16, rose to $25, fell to $18, seller 30, and closed at $18. An assessment of some $20 per foot is talked of.

Caledonia Tunnel was sold at from $12 to $18, and is now firmly held at $19. Sierra Nevada brought $50 ; Bermuda, $5 ; Baltic, $29 ; Daney, $22½.

The aggregate sales of stocks since Saturday last amonnt to $427,127.

Authorized Scale of Commissions Adopted by the S. F. Stock and Exchange Board.

Miscellaneous.

Funded Debt, on par	½ per cent
Insurance Stocks, on par	½ per cent
Wharf Stocks, on par	½ per cent
Gas Stocks, on par	½ per cent
Railroad Stocks, on par	½ per cent
Steamboat Co. Stocks, on par	½ per cent
Telegraph Co. Stocks, on par	½ per cent
Water Co. Stocks, on par	½ per cent
Legal Tender Notes and Bonds, on par	½ per cent
Bills of Exchange, on net amount	½ per cent
Mint Certificates, on net amount	½ per cent
Specie, on net amount	½ per cent

Commissions on Mining Shares.

Sale at 1 dollar up to 10 dollars	$0 25 per foot
Sale at 10 dollars up to 25 dollars	50 per foot
Sale at 25 dollars up to 50 dollars	1 00 per foot
Sale at 50 dollars up to 100 dollars	1 50 per foot
Sale at 100 dollars up to 200 dollars	2 00 per foot
Sale at 200 dollars up to 400 dollars	5 00 per foot
Sale at 400 dollars up to 600 dollars	6 00 per foot
Sale at 600 dollars up to 800 dollars	7 50 per foot

From $800 to $3,000 per foot, one per cent, on the amount of purchase or sale.

Anything above $3,000 per foot, three-quarters of one per cent. on the amouut of purchase or sale.

FRANK LAWTON, Secretary.

J. B. E. CAVALLIER, Preaident.

Mechanical.

LINSEED OIL FOR TOOLS, ETC.

Mechanic's will find the use of linseed (painters) oil a great advantage when fully applied to all the wooden portions of their tools. Every farmer should also keep a can of this oil constantly at hand, and whenever a new tool is purchased saturate it thoroughly with the oil by placing it inside of the can, or applying it freely with a brush. The wood, by this treatment, is toughened and strengthened, rendered almost entirely impervious to water, and of course but little liable to swelling and shrinking. Shovel, rake, fork, hammer and axe handles, are thereby preserved from cracking or checking. The wood becomes smooth as glass by use when oiled. The oil should be applied warm, and, when practicable, so hot as to destroy a brush, but not burn the wood. The wood, before being oiled should be thoroughly dried. A practical man, who has used this oil for a specific purpose has communicated his experience to a cotemporary as follows :

"I ironed a wagon some years ago, for my own use, and before putting on the tires I filled the felloes with linseed oil ; and the tires have worn out and were never loose. I ironed a buggy for my own use seven years ago, and the tires are now as tight as when put on. My method of filling the felloes with oil is this : I use a long cast-iron oil heater, made for the purpose ; the oil is brought to a boiling heat, the wheel is placed on a stick, so as to hang in the oil, each felly an hour, for common sized ones. The timber should be dry, as green timber will not take oil. Care should be taken that the oil be not made hotter than a boiling heat, in order that the timber be not burnt. Timber filled with oil is not susceptible to water, and the timber is much more durable. I was amused some years ago when I told a blacksmith how to keep the tires tight on wheels, by his telling me that it was a profitable business to tighten tires, and the wagon maker will say it is profitable to him to make and repair wheels—but what will the farmer, who supports the wheelwright and smith, say ?"

Axe and hammer handles often break off where the wood enters the iron. The oiling is said to toughen the wood so as in a great measure to secure durability in this particular. We should be pleased to hear from mechanics and others, who may have already or may hereafter make use of oil in this way, as to their experience in its use.

IMPROVED LADIES' BELT BUCKLE.—Messrs. Lemme Brothers, manufacturing jewelers, No. 534 Commercial street, in this city, are now manufacturing an improved ladies' belt buckle, the improvement in which consists in the convenience of the arrangement for fastening. The buckle is made in the form of a plate or shield, divided through its center and held together by a hinge. All that the wearer has to do to unlock the buckle is to raise one-half the shield or plate, when the belt is readily disengaged from the tongue, or teeth, and removed from the buckle. This buckle may be made quite as ornamental and durable as from any other pattern.

Applications for letters patent for each of the three inventions last above mentioned have been made through the Patent Agency connected with this office.

IMPROVED CHIMNEY TOP.—Mr. Aaron Harris, of this city, has made application for letters patent for his newly-invented chimney top, for increasing the draft of chimneys. This improvement was exhibited at the late Mechanics' Fair, and was used during the Exhibition upon the top of the smoke-stack attached to the steam engine which drove the machinery at the Pavilion. When that engine was first put up, it was found almost impossible to get up a sufficient draft for the furnaces, in consequence of the eddies produced in the atmosphere by the broad expanse and high elevation of the Pavilion. Resort in the emergency was had to this ventilator, or improved chimney top, after which no trouble was experienced from insufficiency of draft.

IN the shop of the Ames' scabbard manufactory, at Chicopee, three grindstones, weighing from five thousand to six thousand pounds each, are used up every month.

Affairs at the Patent Office.

A Washington correspondent of the *American Artisan*, writing under date of October 13th, says : I need not inform you that business at the Patent Office is steadily increasing, for this fact is evident from a perusal of the list of claims for new inventions, which you furnish in your valuable paper every week. The visionary ideas which formerly appeared upon the patent record have given place to more practical and useful improvements upon existing machinery, with a view to render it more simple, and better adapted to the desired end. This appears to be a new era which inventors have opened, with the intention of revising, modifying, and re-arranging the multiplicity of complicated machines which they have previously invented and introduced. As a proof of this statement there are a great many applications for re-issues of existing patents, made by patentees or their assignees, who find that the original patents are too limited in their scope to give that full protection which the inventions and state of the art require.

The old and vexed question of dividing an application for a patent, where it appertains to separate devices, or elements, has again crept into the Patent Office and gives a great deal of trouble ; but this time there is not that uniformity of opinion upon the subject which the examiners formerly held. Some of the examiners are very strict in requiring the division of applications for patents, while others are not so much so ; hence it is necessary to exercise considerable judgment in presenting an invention before those who are tenacious in their adherence to an ancient and " fogy " rule. This rule should be opposed as a matter of right and justice to inventors. No person will question the validity of Letters-Patent on the ground that the claim covers two or more separate devices, ideas or elements, if they all tend to the accomplishment of one given end ; and no one will deny the right of a patentee to entertain damages in a suit for infringement of one or more parts of his machine, when said parts form the subject of separate claims, or clauses of a claim. " Shall I be compelled to so prepare my claim of invention as to limit its force in accordance with rules adopted to increase the revenue of the Patent Office ?" The justice, or legality of requiring separate fees for distinct or disconnected subjects is not questioned ; but to make an inventor divide a single subject into two or more applications, and then require of him full fees for each application, was never contemplated by our legislators, and is very unjust to that class of persons who are maintaining the Patent Office in this city, and contributing so largely to the success and prosperity of our country.

A VALUABLE WASHING MACHINE IMPROVEMENT.—G. M. Stamp, of Marysville, has invented and applied a novel improvement to the washing machine, which consists of a small sheet-iron furnace, attached to the bottom of the machine, by means of which the water can be heated in the machine itself, and kept constantly at the desired temperature. The improvement has been applied particularly to the Dashaway washing machine, but is equally applicable to any machine with a zinc bottom. Of course the fire or iron of the furnace must not be allowed to come in direct contact with the zinc. A patent has been applied for.

THE oldest steamer on the Clyde took part in a late festive occasion on that river. On the 17th of August last, one of the partners of the Glasgow and Greenock Towing Company married, and on that occasion all the boats in the harbor were gaily dressed. The steamer Industry, which has now entered the 50th year of her age, carried the flag of the Commodore, being the oldest steamer afloat. The Industry was built in 1814, and was the third steamer built on the Clyde.

WIRE-CUTTING MACHINE.—Mr. L. W. Jobanning, of this city, has invented a machine for the purpose of cutting wire into uniform lengths, which must be of great convenience to tinners and others who have much of that kind of work to do. The platform of the machine is in the shape of a quadrant, and the cutting blades are conveniently arranged for rapid working, and so adjusted as to secure an exact length of the pieces.

A RUNAWAY LOCOMOTIVE.—A locomotive got loose on the Brighton (England) road, not long since, tore along fearfully, made a clean hole through a station house, carried away a tailor's shop, part of a house, an entire wall, and at last brought up against a wall substantial enough to arrest its progress.

Improved Mode of preparing Flax for Spinning.

One of the principal reasons of the great superiority of cotton over flax has been the great facility with which its short fiber could be spun as compared with the long fiber of flax. Many attempts have been made to reduce the flax to short fiber, but the great difficulty has been to render the ends taper and pointed, so that they would close into the yarn, in spinning. Mr. Charles Beach, of Penn Yan, N. Y., has invented and taken measures to patent new machinery by which he claims to have overcome the difficulty, and brought the fiber to a condition for spinning it by the machinery used for cotton and wool. His machines consist of what he calls a " separator " and a " reducer." We will give a condensed account of their operation as he describes it in a letter to us.

The separator is composed principally of two horizontal shafts, carrying a series of saws arranged at distances apart corresponding with the length of staple required, and adjustable to suit different lengths. This machine takes the flax straw just as it comes from the field, without rotting, and separates the fiber by breaking it into proper lengths, leaving the ends pointed, so that in spinning a smooth yarn may be produced. The straw having been subjected to this machine resembles hay or straw cut for cattle or horses, and is ready to be thrown into the machine called the " reducer," for the purpose of extracting the shives and reducing the fiber to an even fineness. It is then placed in a washing-machine and washed with warm water, which has the effect to dissolve the gluten and silicia. It is next steamed in a steam-vat for thirty minutes, after which it is washed again ; and it is then ready for drying, which is done by passing it through a machine with hollow cylinders, heated by steam being thrown into them, and producing heat sufficient to dry the lint as it passes through. The lint is then ready for bailing for market.—*American Artisan.*

PNEUMATIC ELEVATOR FOR MINE SHAFTS—ROPES AND HAULING MACHINERY SUPERSEDED. —With a view entirely to obviate the inconvenience and danger resulting from the breakage of ropes and chains, Messrs. Allison & Shaw propose an invention for dispensing with them altogether, and employing in their place an apparatus somewhat similar in form to that introduced by the Pneumatic Dispatch Company, but which is worked by pressure instead of exhaustion. The inventors state that, in their improved elevators, which are equally applicable for raising either water or minerals from collieries and mines, a cylinder or tube is placed in the shaft, which rises a few feet above the top of the shaft, and reaches a few feet below the bottom of the mine. This cylinder is made of malleable or cast-iron, or other suitable metal or material, and of a diameter according to the weight of minerals, water, or other substances to be lifted. In this cylinder or tube a double-headed piston works, and between the two heads of the piston a fixed or movable receiver, or barrel, or wagon, is placed, which holds the mineral or water to be raised. An air-pump, worked by a steam engine or water-wheel, or other power, is used for forcing air down the shaft in a tube, which air passes into the cylinder below the under piston-head. Forcing only may be used, but exhausting and forcing may be used in conjunction. When the load is put in at the bottom, a valve is opened, so that the air is introduced under the piston, which, with its load, then rises to the top. On arriving at the top the load is removed, and on an escape-valve at the bottom being opened, the piston descends, and the air which escapes ventilates the mine. This improved ventilator not only acts as an elevator and ventilator, but provides a safe and expeditious mode of conveying workmen up and down the shaft.—*London Mining Journal.*

AMERICAN INVENTORS.—The Brussels carpets of England are woven on looms invented by an American and bought of him. Bigelow, an American, went to England to study carpet weaving in the English looms, but England's jealousy would not allow him the opportunity. He took a piece of carpeting and unraveled it, thread by thread, and then combined, calculated and invented the machinery on which the best carpets of Europe and America are woven.

THE NEW ENGLAND RAILROADS.—It is stated on good authority that, although the various New England railroads will show an increase of gross earnings for the year 1864, still the cost of locomotives, cars, the government tax, etc., will make the net result about the same as in 1863. A first class locomotive now costs $25,000, against $8,000 before the war.

HIGH minds, like high hills, are barren, but valleys are productive, and so are humble souls.

The Gold Mines of the State of Sonora.

Sonora scarcely deserves, at present, to be called a gold-producing State, for the amount of that metal exported is very small ; but the yield was at one time, and may again be, considerable. The placers are in the north, where the Apaches are numerous, water scarce, and the white population very sparse, so that the miner cannot work without great danger, and cannot obtain supplies without great expense. The earliest known placer was at Cieneguilla, sixty miles N. N. W. of Hermosillo. The discovery was made in 1779, by some soldiers on their way to garrison the fort at Altar. One of them, going to a brook near the camp, saw something glitter in the water. He picked it up and it was a lump of gold. The whole camp was soon engaged in mining, and extending their search, they found rich diggings two or three leagues further west. There are no statistics of the yield, but the total amount must have reached many millions in the course of the twenty-four years that the placer was regularly worked. The largest nugget taken out was worth $2,500, and the second $1,500. The former was sent as a present to the King of Spain. In October, 1824, at a point twenty miles east of Cieneguilla, the placer of San Francisco was discovered by Don Teodoro Salazar, who, while on his way to another mine, was compelled to halt to arrange his packs, and while stopping he took up some of the earth in his hand and discovered particles of gold in it. Within a year there were twenty thousand souls at San Francisco, and for six years it continued to be a thriving town ; but in 1810 the gold yield decreased greatly, and soon the placer was deserted by all save a few gleaners or *gambusinos*. The largest nugget found at San Francisco was worth $2,800. The diggings were in no place more than twelve feet deep, and the ordinary depth was two to four feet. There were months in which the yield was $300,000, and Velasco, who has written the best book on Sonora, and who was the second political officer at the placer of San Francisco in its best days, says that in his opinion the total annual yield was more than $4,000,000. There were numerous veins of auriferous quartz in the vicinity, and some of them were very rich. Neither San Francisco nor Cieneguilla had any water within twenty miles, and the entire supply was brought in kegs on mule back, and a keg full was sold for half a dollar or a dollar, according to the season and the supply. The placers of San Francisco were abandoned in 1837, when those of Quitovac were found in the northwestern corner of Sonora. The time will come when the placers of San Francisco will again be worked; and if a large and permanent supply of water can be obtained by ditches of pipes—and Velasco implies that it can be done—the gold yield would be greater than ever. The richest mining district of California, within a circumferenee of twenty-five miles which was the area of the San Francisco mines, never could have been made to yield a million of dollars annually by dry-washing, or the rocker ; and those diggings which paid by the rude modes of working known in this State in 1849, have all paid twice as much for the sluicing and the hydraulic washing of later years.

Quitovac, San Antonio, Sonoita, Basura, San Perfecto, Palomas, Alamo, Muerto, Vado Seco, Baeuachi, Aigame, Sohia, and other placers of Sonora, are now neglected because either of want of water or fear of the Apaches. The savages will be destroyed, and the water will be obtained. The expense and the delay in the construction of the canals may be great, but the work will be done. The evidence of the original richness of the earth, and of the present abundance of undisturbed auriferous gravel is conclusive in the mind of every one who goes to the trouble of reading Velasco, and conversing with intelligent residents of the country.—*Alta.*

THE heir apparent of Russia, the future master of a realm of more than seven millions of square miles—an empire comprising one-seventh of the territorial part of the globe, and about one twenty-sixth part of its entire surface—is in want of a wife, and cannot find one. Grand Duke Nicholas, heir apparent of all the Russias, twenty-one years old, tall, good looking, in splendid uniform, speaking five languages, and with all the accomplishments, is willing to wed, yet cannot get a wife. Only five candidates have presented themselves, and of these he doesn't like three of them, and his father does not like the other two. So here he is, poor fellow, and can't get a wife ; and cold weather is coming.

THE value of real estate in England is estimated at $32,000,000 ; in the United States, $16,000,000. The public debt of England is over $2,400,000,000. The public debt of the United States is a trifle less than $2,000,000,000.

TRUTHFULNESS is a corner-stone in character, and if it be not firmly laid in youth there will ever after be a weak spot in the foundation.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Sellers Patent for inventors can secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we still furnish the names of numerous parties for whom we have obtained patents during the past year.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

San Francisco:
Saturday Morning, Nov. 26, 1864.

EASTERN FINANCES.

In consequence of the non-arrival of the Overland Mail for a week past, we are without any later advices per mail from eastern markets. Our exchanges received by the steamer Constitution, concur in speaking of the improved condition of commercial affairs, and an active fall trade was anticipated. Jobbers in dry goods were doing a lively business and prices had advanced from 5@10 per cent. Cotton goods of all description were tending upwards, and it was thought that the supply would prove entirely too small for the demand the ensuing 30 days. Stocks of goods in the hands of commission houses and manufacturers would, it was believed, be all needed during the season. Woolen goods were especially active, and this demand was expected to increase as the cold weather approached. The consumption of woolen goods has largely increased throughout the whole country within the last three years. Flannels and knit woolen jackets have become of late staple articles and cassimers are supersediug cottonades. The theory that "cotton is king" is now an absurdity. Fabrics composed of wool or flax can be substituted for nearly all the cotton goods heretofore used and the process of change is going on steadily all over the loyal States. The increased demand for woolens that has sprung up since the commencement of the war and the production of so many styles expressly intended to take the place of cotton fabrics, is a clear demonstration of our position in this respect. We have learned to do without cotton, and its scarcity and high price just now is no material detriment to us.

OUR MINES.—Professor Silliman, having completed his survey of the different mining districts of Nevada, reports in very decided terms of the richness of the lodes and their permanent character. In speaking of the Comstock lode, the Professor remarked that the shafts sunk and tunnels run on the lode were but surface diggings to what we shall see in a few years, and that the lode shows no signs of giving out; on the contrary, it was capable of yielding much more than it is now doing. The Professor has also examined the gold mines of this State, and is satisfied that if judiciously worked they can be made to yield large returns to their owners.

THE FOREIGN MINERS' TAX.—The Foreign Miners' Tax Collector of Nevada county has declared his intention hereafter to enforce the tax against all foreign persons who have not declared their intention to become citizens, instead of confining it to the Chinese, as has heretofore been the rule. The consequence has been a sudden rush for papers of citizenship from persons who have heretofore had no idea of forswearing allegiance to their home government.

PAPERS in the Rockland (Maine) telegraph office were fired by lightning a short time since. The *Free Press* says it apparently ran along the wire like a ball of fire, and burst about twenty or thirty rods from the telegraph office.

THE COMO MINES.

We are indebted to Mr. Lewis Solomon, of Como, Lyon county, Nevada, for the following facts with regard to the progress of mining operations in and about that place. Mr. S. went East on the Golden Age, on business, but will shortly return to his mountain home in the Sierra Nevada. He is well acquainted with the mines about Como, and has the fullest confidence in their value and importance. Capital is all that is needed to open up in that locality one of the most valuable mining districts in silver land.

The town of Como is well laid out, occupies a very fine site, with an abundance of water and timber. The climate is unexceptionable for a mountain town, and the hills around are everywhere filled with promising veins of quartz. Professor Silliman has recently visited this locality, and we understand he has expressed himself as being highly pleased with the indications of the mines around Como, and pronounces it one of the best districts for the investment of capital that he has seen in the State.

The famous Whitman mine is one of the best known claims in the district. Mr. Solomon has made thirty-nine tests from the croppings of this lead, which have varied in their results from $ 1.87 to 3,130 per ton. The company is now selecting 100 tons of their best sulphuretted ore, which they will soon have crushed at the Sacramento mill. The claim is located eighteen miles from Virginia City, and three from Como. Among the other mines which are now in process of development, we may mention the Montgomery, which has a double shaft down 136 feet. The ledge is a very large one, containing much black sulphuret. Several tests were made by our informant of average ore, which indicated about $50 rock. The Lancaster has a shaft 70 feet deep, which has developed some fine looking ore. A lot of several sacks worked in this city yielded $60 to the ton.

The Rappahannock has been opened by an incline to the depth of 176 feet, which has developed a very promising lead, carrying a good show of sulphurets, several tests of which, made by our informant, yielded from $150 to $900 to the ton. The company is now putting down a perpendicular working shaft, divided into three compartments. This shaft is now down 104 feet.

The Orizaba, Nos. 1 & 2, is also exceedingly promising; so also is the Monte del Rey, upon which the workmen are now down 204 feet, with a perpendicular shaft. They have two ledges, one upon either side of the shaft, east and west for which they had commenced to drift before our informant left the mountains.

The Amazon Tunnel, three quarters of a mile from Como, is a heavy and important enterprise, designed for prospecting and drainage. The tunnel is designed to cut, test and drain a series of several of the best ledges in the district.

The Real del Monte is located in the heart of the town, and has produced some very fine ore, which has assayed as high as $1,000 to the ton. The Monte Christo, near by, is also rich and promising, so is the Palmyra, the Orient, the Fair Play and many others which might be named.

IRRIGATION.—The prospect of another dry winter is causing many ranchmen to turn their attention, seriously, to the necessity of irrigation. Large tracts of land in Colusa county will be irrigated by water, to be brought in from Sycamore slough, which is fed by the Sacramento river.

SENDING THEIR OIL EAST.—Many of the whale ships in port are sending their oil East by trans-shipment. The ship Prima Donna is loading for that purpose, and will take a full cargo for New York.

THERE are forty-five periodicals published in San Francisco—ten dailies, twenty-two weeklies, eight monthlies, one semi-weekly, one tri-weekly and two annuals. Three are German, three Spanish and two French.

SAN FRANCISCO MUNICIPAL REPORTS FOR 1864.—We have received a copy of the Municipal Reports of the city of San Francisco for 1863-64, which are comprised in an octavo volume of 361 pages. The volume contains the annual reports of the heads of the various departments of the city government together with a large amount of statistical and other valuable information in relation to the city and its government.

It appears that 966 suits have been commenced in the Fourth District Court and 345 in the Twelfth District. Of the 966 in the Fourth District, 82 have been discontinued, 200 adjudicated, and 684 are still pending. Attachments were issued in 213 cases.

The number of vessels engaged in the coast and bay trade is 531—an increase of 27 over the number of last year. Thirty-two of the number are steamers and 91 square-rigged vessels.

During the fiscal year, 6,491 deeds and 1,655 mortgages were recorded in the Recorder's office.

The expenses of the school department have been $228,411. Property to the amount of $3,351,217 is found in the city exempt from taxation, consisting of Federal, State, city, church and school property, etc.

The assessed valuation of property is: Personal property, $35,554,425; real estate, $43,135,307—making a total of $78,689,732.

The Harbor Master, in speaking of the water-front, says: "The front, at present, is in a shameful condition, and the sooner the finances will permit of something being done for its improvement, the more it will contribute to the saving of life and property, and the more, also, redound to the credit of the city and State."

EDITORS MINING AND SCIENTIFIC PRESS:—In your issue of November 19th I see an indignant communication from a Mr. G. K. Godfrey in regard to my opinion of the Pneblo district. I regret that our views should be so much at variance, but cannot but reiterate the opinion before expressed as to the apparent value of the district. Not having seen any of the gold-bearing rock, it is only fair to suppose that it must have been discovered since my visit. Although I only spent four days at Pneblo, still I was not idle. I saw all that I could, or at least enough of the character of the mountain. Mr. Godfrey should certainly be more familiar with the region than myself, but since he is the reputed owner of several thousand "feet," I leave it to yourself whether or not his opinion should not be taken "*cum grano salis.*" Very respectfully,

W. M. GABB.

THE LICK HOUSE.—In comparison with the conduct of all other California hotels, we must admit our admiration for this house. In the first place the foundations and structure of this building, reared under the rigid supervision of its famous author, is hardly equalled by any edifice in the State except the Masonic Temple. Like all true architecture our admiration for the structure increases with familiarity. Within, we find all its appointments complete, regular, quiet and elegantly homelike. There is no bombast in the conduct of the Lick House or its proprietors, and after once enjoying the excellency of their accommodations, you ever after meet Messrs. Alstrom & Johnson, at home or abroad, with peculiar pleasure.

VALUABLE ORE.—The Virginia *Enterprise* learns that Prof. Silliman was somewhat puzzled with some ore found in the vicinity of Como, Palmyra District. At first he pronounced the ore iron, but upon testing it found it unaccountably rich in silver. We believe he is now engaged in testing the various ores of the District preparatory to a formal report upon the mines of the district.

A LOCOMOTIVE has lately been patented in England which is designed to condense its steam when passing through tunnels. For this purpose it has a surface condenser over the cylinders, extending the whole length of the engine.

NATIVE POTASH.—A load of native potash was recently brought into Carson City, which was taken from an extensive bed of that material which has been found near the Sink of the Carson. It was taken to Duff & Co's Soap Factory. Small samples of the article had been previously brought in and tried, giving entire satisfaction. In other localities this article is the result of much labor and cost. In the above locality, however, it appears that the soap boiler has only to drive his team into the bed and shovel up a load. The same is the case with salt, saltpetre, alum, sulphur, and numerous other articles that might be mentioned, useful in the arts and trades. Thus far says the local paper almost every article, except coal, required for the reduction of our ores, is found in abundance within our own limits, or at least the material from which to manufacture it. Nature has certainly furnished our barren, unsightly land bountifully, and yet we have hardly looked into her resources. Future developments, we confidently believe, will show an abundance of coal; and possibly Nature may have provided, somewhere in our mountains, springs of nitre and sulphuric acid.

PLACER GOLD EXCITEMENT IN WASHOE.—Recent developments, it is said, render it quite certain that the entire flat on which Dayton is built contains a large amount of gold, and only needs the outlay of labor and a small amount of capital to make it available. Miners' meetings, says the Dayton *Sentinel*, have been held, a district organized, a code of laws adopted, a Recorder elected, and everything put in motion in such a manner as to bring to mind the flush times when ounce diggings were common. Six companies have their sluice boxes set and are now at work, but as no cleaning up has yet been done, we are not prepared to speak of the result. Lawyers, mechanics and others are locating claims all around on the flat on the north side of Main street, and several have made locations on Silver street. The Rose ditch supplies an abundance of water. The mines are near the mouth of Gold Cañon. Gold diggings have been worked for a number of years in the Cañon itself, and there is no reason why there should not be good pay found at the mouth of it, where the gold has washed down.

OPEN SESAME.—This mining company, says the Contra Costa *Gazette*, have just chosen a new set of trustees for the ensuing year. Mr. Parkell is the only member of the old board re-elected. With him, Mr. George Treat and Mr. Georgina, of San Francisco, were elected. From our own county, Capt. O. C. Coffin and T. A. Brown, Esq., were chosen, and Capt. Coffin was made President of the Board. Rev. Wm. B. May, formerly of Martinez, now a resident of San Francisco, was chosen Secretary in the place of R. O. Sturdivant. The present Board have made arrangements to have several tons of ore taken promptly to the city, and there thoroughly tested by parties who are prepared, if the result proves favorable, to put up a mill at the mine, and crush and reduce the ore at fixed prices for the company, or to sell the mill to the company, as may be preferred by the trustees. Success attend their efforts.

BRASS.—It is not the brazen metal so remarkably prominent as to become a characteristic feature in the countenance of the general California public, to which we propose now to call attention, but to the more important and desirable article—the genuine brass, as manufactured by Messrs. Gallagher & Weed, into bells, bibs, knobs and other useful articles and ornaments. Their factory is located at 125 First street, and our readers would be surprised, upon taking an inside peep, at the extent and importance this foundry of brass is assuming in our city. We are happy to add that Messrs. W. & G. are worthy of their proud success.

PROFANITY.—The *North American Review* argues that profanity indicates a chronic weakness of intellect and a poor education, for it requires no genius to swear, while it does require some learning and talent to converse in genteel language. Let the profaner take a note of this.

[Written for the Mining and Scientific Press.]

NEVADA CORRESPONDENCE.

Virginia City, Nov. 19th, 1864.

A WOMAN'S "SAY" ON THE ELECTION.

We, as a community, have had our "blow-out," our "big drunk," and our election. The great political cauldron, which has boiled, bubbled and spluttered at such a furious rate for some months past, is again quiescent; ear-splitting discords on "Rally Round the Flag" and "Marching Home" no longer delight us with their harmony; whisky is again "two hits" a drink, and we can no longer indulge in the luxury of a "free fight" without paying our compliments to the Recorder. But, dear me! what horrors haven't we passed through during the contest—a marriage and several old-fashioned christenings are nothing in comparison. I, individually, am somewhat of a politician; am strongly in favor of the Union (*a double entendre*), and at the beginning of the contest gave my aid, whenever and in whatever capacity I found it of service, to the Union cause. I petted, coaxed and scolded my stern acquaintance into voting for my candidate. I attended mass meetings, and sat for hours with a whisky-bloated individual and a black bottle on one side, and a phthisical Frenchman, whose breath was the essence of garlic, on the other, and listened with much patience (a virtue we women alone are supposed to possess, for we didn't stamp our feet a single time) to stupid harangues, which neither the audience nor the orator seemed to know the drift of, and violent denunciations of all humanity and "any other man" who didn't believe as the speaker did. I worked on badges and banners by lamp-light until my eyes were awful to look at; and, let me whisper, until I saw my beloved badges, in the preparation of which I had taken so much pride, decking the ears of a veritable donkey. I stood on balconies, exposed to the night air, and flaunted my best handkerchief into shreds, and smiled my sweetest until every fool and his brother had stared me into blushing, and I did without a new hat (my greatest sacrifice), that I might contribute the money thus saved to paying the whisky-bill of numberless zealous individuals. Indeed, I did not know that it would be put to any such use, or I assure you I would have secured the hat and let the party go to the—dickens. All of this I did do, and would have continued to do, had I not become aware that the gentlemen were perfectly oblivious to my little efforts, and, in fact, to the existence of the ladies; and to a being whose soul lived only in patriotic ardor, and was above the pithy prejudices and varieties of party, you may imagine the stunning effect of this discovery! I abdicated my crownless throne, thoroughly disgusted at the selfishness of man—political man in particular. I renounced my dreams of being a second Joan of Arc or a Member of Congress, and betook myself to the retirement of my quiet abode until the political storms should blow over.

But Floy is herself again, and I think our people are gradually settling down into their old routine of business; for Smith—I board with Smith's wife—came home last night as early as one o'clock, and without the usual impediment in his speech, caused, as he avers, by the night air, and he gave Mrs. Smith a civil answer this morning; and when I met Mr. Snooks—my beau—on the street, last evening, he actually *knew me*. Whisky dens and street corners are deserted, unless when the wires take a notion to give us a few additional items about the election, and at least a majority of our people seem to have something to do.

BENEFITS.

That the election has been beneficial to our community in some respects, I cannot deny. There is a visible decrease in the number of sharpers and gamblers to be seen on our streets, and the stages to *foreign* parts—Idaho and Allison Ranch—have been well patronized. A few more of the same sort of skedaddlers can yet be spared without bringing our citizens to grief. We are a much better dressed people, too. Toeless boots, rimless and weather-beaten hats and seedy clothes, are things of the past, and in a promenade on C street, high hats of the latest pattern, glossy clothes yet bearing marks of the tailor's goose, and polished boots with untarnished soles (belonging to the boots, not to the wearers) seem to be every man's property. I have noticed that many of my own sex sport new finery too, and were they not supposed to be "neutral" in politics, I would declare that the election had something to do with their change in apparel.

THE RESULT.

The result of our election has been a pleasant surprise to all Union-loving citizens, and with officers of character and ability, as Nevada now has, to rule over her destinies, she has prospects of a brilliant career before her. Your capitalists, as well as our mining population, have a deeper interest in our Judiciary than in any other of our State departments, for upon our Judges and their action on the bench depends, in a great degree, the future of our mines and of the immense capital invested in them. The State Constitution vests the judicial power in this county (Storey) in three District Judges, having extensive and concurrent jurisdiction, and provides that they shall enter upon their duties on the first Monday in December, and Court will be continued until the very large number of cases that have accumulated are disposed of. Theirs is no envious position; but I am glad to say that Messrs. Mesick, Rising and Burbank, our newly-elected District Judges, are acknowledged to be gentlemen of stern proclivity, irreproachable character and extensive legal ability, and will wear the ermine of office with credit to themselves and satisfaction to our law-abiding citizens.

HEALTH—SILVER ON THE BRAIN.

The general health of our city has been good, but I am sorry to say that symptoms of that peculiar and fatal malady, whose victims are legion—"silver on the brain"—are again visible in our midst, and numbers of eminent and highly respectable citizens have lately been seen upon our streets suffering under its strange hallucinations. To the unsophisticated, the symptoms of this dire disease are highly amusing; but ah! they have never beheld its ravages in all their dread reality. When I see its victims armed with eye-glass and hammer, and regardless of drooping spirits, wearied body and torn clothing, goaded onward by the insatiable fever over mountains, rocks and sage-brush, through crumbling tunnels and down dilapidated shafts, ever in search of a shadow; when I see them standing on the street-corners, with wild and frenzied looks, and with pockets weighed down with rocks, and even their hats filled with *debris*, expatiating to a wonder-struck crowd, and forcing friend and stranger to gaze through the mystic glass (ah! did people know the danger of gazing through that glass?) in search of the *ignis fatuus* of their muddled brain; when I see them running, breathless and excited, after gaudily-printed scraps of paper, with red stamps on the corners, and lavishing hoard, cigars, whisky, and even their wife's pin-money, to secure them; thinking, dreaming and talking incessantly of Lady Bryan, Mary Ann and Sweet Alice, without regard to their wife's jealousies, or caressing with fond affection the wildest of wild-cat, I feel the deepest recesses of my heart go out in sorrow and pity to them, and I cannot but think how great is man's credulity.

I think that were the first symptoms of this malady more generally understood, it might, with proper treatment, be restrained, or, at least, confined to the first victims; but from the culpable curiosity of many to witness its different phases, and thus are drawn within its contaminating circle, it is now spread throughout an entire community. Our city physician, Æsculapius Hardtimes, is laboring with deserved success to stop its further spread, and with a liberal appreciation of the miraculous Washoe drawing-plaster, known to the medical fraternity as "assessments," or its twin brother "litigation," to the part most affected—the *pocket*—the present victims will, we hope, soon be restored to health; but will they ever again roam our streets with the merry heart, happy smile, light step and careless mein of by-gone days?

MINING MATTERS.

Despite the general depression in business, prospecting and improvements on our mines have progressed with unchecked vigor, and, though the stringency of money matters and the inclement weather have caused a cessation of work on many of the myriad claims, mining prospects were never more flattering than at the present. Operations on many of the abandoned locations will not be renewed, and it is well, as it is beyond human expectation to find a return for investments made and money squandered in searching for mineral ledges in locations where any one with common judgement will know they do not exist. The capital which would go to prospecting these wild-cat locations will now seek investment in mines of established merit, and will bear fruit in increased treasure shipments. Though it had long been conceded that everything under the Washoe horizon large enough to stick a notice on was "taken up," we hear of new discoveries and new locations, some of them really possessing merit; new mills are going into operation, others are yet hastening to completion; the cloud of mining litigation which has paralyzed enterprise and improvement will soon be disposed of, and energy in prosecuting developments, and retrenchment in mill and mining expenditure, are the order of the day.

THE COMSTOCK.

On the Comstock new developments have established beyond cavil the existence of large deposits of the richest ore throughout its entire extent, and from what I beheld I venture to predict that the list of dividend paying mines will be largely increased during the present winter. Substantial improvements are being made on most of our leading mines which will facilitate the extraction of ore in increased quantities and on a more economical basis. The Chollar is one of our best managed and most promising mines, and when improvements in machinery, now being made, are completed, its present yield will be doubled. The Savage is taking out large quantities of rich rock, and the new hoisting house near the large shaft is fast approaching completion. The Potosi and Bajazet are both prepared to employ a large force in extracting ores, but are at present restrained by injunction. A few days will remove this barrier, and some five hundred miners, and a number of mills, now idle, will be immediately employed. The water which threatened to inundate the Ophir mine has been mastered, and the new shaft is progressing satisfactorily. But a short time will elapse ere this mine will again be a favorite with capitalists. The Gould & Curry does not look as favorable on lower levels as could be desired, but explorations are being pushed with vigor, with every prospect of meeting with success at an early day. In the meantime ore is being taken from the upper levels in considerable quantities, and work is vigorously prosecuted in the new shaft. The Hale & Norcross has again struck it, though not *sufficiently* rich to warrant such a jumping up in price as was witnessed on receipt of the glad tidings. The rock now being taken out is of poor quality; better, however, is in sight on a lower level.

It is rumored that the Sierra Nevada, Burning Moscow, Milton, Bullion and Caledonia Tunnel have all "struck it" rich; but I have not yet had time to visit them, and therefore cannot vouch for the correctness of the report.

Floy Favorite.

New Copper Company.—La Glorie Company filed a certificate of incorporation in the County Clerk's Office of San Francisco, on the 25th instant. The claim is located in Mariposa county. Capital stock, $600,000, divided into 6000 shares, of $100 each. The trustees are William H. Sharp, John T. McLean and J. Y. Jones.

The wife of the Postmaster of Simcoe, Canada West, has been fined $50 for taking a letter out of an unsealed envelope and reading it. That is paying pretty dear for the gratification of idle curiosity.

Hunt's Ditcher.—Mr. W. D. Hunt, of this city, has recently invented a Ditching Machine which is worked on quite a new plan, and for which a patent has been applied for. We understand that the machine has been examined by several mechanics, who have pronounced it quite practical. It is designed to be worked by three men and four horses, and will cut a ditch three feet deep and four feet wide, or less if desired. The running gear is similar to that of a wagon, with bind wheels seven feet in diameter, and front wheels four feet in diameter. The body rests on the carriage, and can be raised or lowered, by four screws, to suit the cutter to the action of the work to be done. The cutter is on a horizontal shaft in the ditch, and is rotated by gearing connected to an upright shaft with a pulley. On the pulley runs an endless chain connected with a capstan set about one hundred feet in advance of the machine. The horses work the capstan and communicate motion to the machine. The machine has an elevator connected to the main shaft with pulleys on which the elevator works to throw out the earth upon one side of the ditch. This machine is calculated to cut and clean from three to four hundred feet per day, and it may be taken from place to place as as readily as a wagon. For further particulars send to E. O. Hunt for circular. See advertisement in this paper.

Eds. Press:—In last week's communication there occurred a serious typographical error in the marvelous passage, "And darkness was upon the face of the deep." It read thus: "And darkness was upon the face of the earth." The misquotation not only destroyed the beauty and significance of the language but made it convey an untruth. For as yet there *was* no earth, the matter composing the bodies belonging to our universe was in its elementary or gasseous state. Primordial atoms filled a deep so profound that no eye but God's could penetrate its dark domain. When "the spirit of God moved upon the face of the waters" or when the chemical combination of the elements commenced, there was light and matter aggregated to form solid bodies. I will here state that the researches of Bunsen and Kinchhoff in spectrum analysis reveal the important truth that metals must be expanded into vapor, by heat before they will chemically combine with oxygen to produce light.

F. A. H.

Forhestown, Nov. 22, 1864.

Quick Work.—The Miners' Foundry some two weeks since received an order for a twelve stamp mill, to go to Mexico, with the request that, if possible, it should go down on the steamer of the 14th inst. The order was received and work commenced on Friday morning, the 11th inst., and on Sunday, the 13th, the mill was ready for delivery on board the steamer. The bed-plates, stamps, etc., had been cast and finished up, which, with a set of Wheeler pans and two separators, were placed on board of the steamer on Monday.

Mining Engineer.—We would call the attention of miners and mill men to the card of Mr. Sherman Day, in another column, who has recently established himself in this city. Mr. Day been for the past seven years superintendent of the New Almaden quicksilver mine, and as a mining engineer probably stands second to none on the Pacific Coast.

Rates of Fare.—The Steamer Constitution, which left for Panama on Wednesday last, took but a small complement of passengers. The rates of passage were:—Upper saloon, $278; first cabin, $187; second cabin, $133; steerage, $79. There was no opposition.

The Great Pan Controversy between Mr. Varney and Mr. Wheeler has been decided in favor of the latter (defendant). The case was argued in September last, and the decision is, we understand, quite voluminous.

A Chemist in Liverpool, who sold strychnine by mistake and killed a man, has been sued by the widow and compelled to pay her $7,500 damages.

HOME FINANCES.

The money market is without especial change, and on steamer day the requirement in bank for the usual settlements made was not regarded as at all pressing. Accomodations to merchants and others in good standing, if for legitimate business uses, are still extended at 1½ ₱ cent per month; 2 ₱ cent per month, however is charged by some bankers upon what is deemed first class collateral; and in the open market we learn of even higher rates. The fall trade thus far is lighter than was anticipated early in the season, but the condition of many portions of the interior is such that dealers are compelled to curtail business there, and to avoid giving the credit usually extended to some of their customers. This conservative policy is, in a measure, a necessity with them, for the reason that the same system is pursued here by jobbers and others with all country buyers.

The agricultural and placer mining interests of this state may, however, soon brighten; slight rains that have already fallen give token at least of some encouragement in this subject.

Receipts of gold and silver from the interior and north coast, since Saturday last, have been unusually large, and exceed two million dollars. About five hundred thousand dollars of this sum came from the Boise region and from British Columbia. The Branch Mint during the same period received nearly eight hundred thousand dollars for coinage.

The transfer of some $600,000 from New York to this city, growing out of the sale of 12,000 shares of State Telegraph Stock to Eastern parties, had a perceptable influence upon the bullion exchange markets on steamer day. Bullion was in little or no demand and gold bars brought less than they would realize in the mint. Eight hundred and thirty was the current rate. Silver sold at from 1½ ₱ cent discount to 2@2½ ₱ cent premium.

Exchange on the Atlantic cities for bills payable in currency were offered at 110 ₱ cent premium on gold. Telegraphic transfers were sold at 4 ₱ cent premium, and drafts payable in coin at 2½ ₱ cent. Legal tenders have been in good request during the week at from 46@47 ₱ cent and closing at 46½ ₱ cent.

For the Sanitary Fund.—Mr. R. B. Woodward, proprietor of the What Cheer House, in this city, has twice, within the past few days, opened his magnificent private grounds and residence on Mission street, between 13th and 14th streets, for the benefit of the Sanitary Fund. Tickets of admission were issued to visitors at fifty cents each. The last opening, on Thanksgiving evening, netted $103 for the fund. The grounds of Mr. Woodward are the most elegant and ornate on the Pacific coast. They are judiciously ornamented with statuary, and buildings enriched with selections of cabinet specimens from the numerous departments of the mineral and animal kingdoms. The whole forms a most complete museum of arts and sciences, as creditable to the genius and taste of the enterprising proprietor as is the holy and benevolent use he makes of them in the cause of humanity and his country.

The Blessed Rain, so long looked and prayed for has come at last, in right good earnest. The great black clouds commenced marshalling their battallions while the prayers of the people were ascending on Thanksgiving Day, and since that time they have been almost constantly pouring down of their abundance, in a manner seldom witnessed in this latitude. The rain is continuous, all over the state, and can scarcely fail to meet the most extravagant wants of both the miner and farmer. Let us be twice thankful.

To Correspondents.—We have received an interesting communication from Virginia City, but too late for insertion to-day. "Floy Favorite," another Virginia correspondent, appears again in our columns, to-day; her letter will be read with interest.

COMMITTEE REPORTS

Of the San Francisco Mechanics' Institute Industrial Exhibition of 1864.

[By authority of the Executive Committee for the management of the Fourth Industrial Exhibition of the Mechanics' Institute, we shall continue, under this heading, until completed, the publication of the Reports and Awards of the Examining Committees in the various departments of the Exhibition, as revised by the Managers in accord with the rules governing the distribution of awards. Where the reports have not been made in form prepared for publication abstracts or digests only will be given. The Managers desire it stated that, while articles originating and manufactured abroad contributed in a degree to the variety and interest of the exhibition, which in return afforded their merits opportunities of becoming widely known, to the advantage of those showing them, the enterprise was intended to be an exposition of the material and industrial resources of this State, and the adjacent Territories, to which the honorary awards must be limited. Believing, too, that the distribution of premiums of several grades among competitors has a greater tendency to produce jealousy and dissatisfaction than to encourage enterprise and efforts for excellence, the Executive Board has determined to allow no second, third, or other inferior grade of Premiums.]

Class XXXIV.

Horticultural, Botanical, Etc.

SUB-DIVISION—Fruit.

COMMITTEE:

O. C. Wheeler, A. Martin, J. D. Knapp.

Report:

The undersigned, appointed a committee to examine the fruits on exhibition, beg to submit the following brief notes:—

All the Fruits to which the attention of your committee was called by the Director in charge of that department were exhibited by ten gentlemen, and more than one-half of the whole by one of the ten. While the fruit show, as a whole, is by no means large in quantity, and is actually small in the number of participants, it is worthy of all praise in the self sacrificing spirit which induced it and the quality of its specimens. To illustrate: Mr. James R. Nickerson, of Placer county, who needed no addition to his reputation as a fruit-grower of the first-class, at an expense of hundreds of dollars, brought with him, a distance of nearly two hundred miles, an amount of fruit, of large money value in the market and in variety greater than any one man ever before exhibited in this State, arriving here in time to give the Fair the full benefit of his industry on the day originally advertised for its opening. The delay and postponement from time to time kept him here at large expense, and to the utter destruction of no inconsiderable portion of his best specimens. He nevertheless remained here until you were in the full glow of successful progress, and then went home to replenish his tables with fresh specimens from day to day, as those on exhibition failed, thus showing a devotion to the interest of the Exhibition perhaps never equalled on this coast. Other exhibitors during the Fair have done the same thing, though in smaller measure.

Mr. J. R. Nickerson, of Lincoln, Placer county, exhibits 223 varieties of Apples, generally well grown and fine specimens. From this large number of varieties, some 20 or 25 varieties might be selected which would be equal to the best, and would grace the finest market in the world, the whole year round—an assortment that would leave little to desire in this the "king of fruits." 103 varieties of Pears, to which the remarks apply with equal force. 85 varieties of Grapes. Among these your committee notice as large and handsome, the Palestine, White Muscat of Alexandria, Black Hamburg, Rein de Nice, Royal Muscadine, Fiber-Szhagas, Purple Damascus, Blue Malaga, and several others, which, though of small size, were exceedingly rich and well flavored. He also exhibits raisins of both last and this year's production, which promise, under favorable circumstances, to range high in the scale of excellence. Mr. Nickerson also exhibits 20 varieties of Peaches, 8 of Quinces, 5 of Figs, 4 of Plums, Pomegranates, English Walnuts and Paper-shell Almonds, to the superior excellence of the latter of which the attention of your committee was especially called, and to which they bear unqualified testimony. He also makes an exhibit of Dried Fruits, among which are Pears, Apples, Peaches, Plums, Cherries, Blackberries, Raspberries and Figs, which for beauty and excellence we have rarely seen equalled. Your committee was happy to learn from Mr. Nickerson that he had already decided to reduce very largely his number of varieties, and confine himself to the culture of a few of the best. No doubt many fruit growers in this State might profit largely by adopting a similar course. Mr. Nickerson is entitled to the Premium for the largest exhibit of fruit and the best dried fruits.

Mr. T. Delpoix, of Stockton, exhibits 14 varieties of Grapes, one bunch each, all very fine, and several of superior beauty and excellence.

Mr. Mark Forney, of San Jose, exhibits 39 varieties of Pears, of which several were finely grown, and 9 of Grapes, which, though not all fully matured, make a most creditable display.

Messrs. L. F. Sanderson & Co., of San Jose, occupy a table with 44 varieties of Pears, which, taken as a whole, are superior to any other pear exhibited in the Pavilion. Their Buerre Clarigeau is of such superior form and beauty as to constitute a marked feature in the room. Premium for best exhibit of pears.

J. C. White, of Sonoma, exhibits 60 varieties of Apples, generally well grown, and some of them decidedly fine. His Red Siberian Crabs are as good as we have ever seen.

Mr. Wm. O'Donnell, of San Jose, being one of the Directors, declines to compete, and yet few persons have added so largely to this department of the exhibition. His 26 varieties of Apples and 29 of Pears, and his Grapes, bottles of Wine, and Bouquets, and rare Potplants, Flowers and Evergreens, all from his nurseries, show that he has few peers in the State.

Mr. D. E. Hough, of Oakland, exhibits 113 varieties of Pears, all from his nursery, many of which are as strong witnesses of his own taste as any culturist need wish.

Mr. S. J. Barnwell, of Mountain Farm, Santa Clara county, exhibits a fine assortment of Grapes, and one variety of Plum—"Blue Imperatrice"—which was of superior quality.

Mr. M. R. Miller, of Pleasant Valley, Solano county, exhibits a box of Raisins from White Muscat Grape, of good quality, made this year.

Mr. B. N. Bugby, of Folsom, Sacramento county, exhibits two boxes of Raisins, made from the Fiber-Szhagos Grape, one in 1863, the other in 1864. [This grape is propagated under several different names, as "Hungarian Wine," "White Malaga," "Raisins," etc. The above name is true—its orthography being obtained from a native Hungarian gentleman and scholar familiar with the vineyards of that country, where the grape originated.] The latter is his better work. The raisins made last year were good, those this year far better, and as yet the best ever exhibited in the State. As Mr. Bugby intends to make a business of putting up raisins, a remark or two may not be wholly obtrusive: 1st. In this climate—that of our interior valleys and mountain slopes—the first danger is that the grapes will be "sun-burnt" on the vines, to a degree which, though scarcely visible, will interfere with the perfection of their maturity—the second, that they will "sun-scald" after being spread upon the drying-tables, to prevent which much turning over at the commencement of the drying will be necessary. 2d. In this country where there is such a morbid taste for large size in fruits [your committee is happy to note a most desirable reformation on this point now in progress], there is danger that the raisin-grower, in his desire to produce large clusters of raisins, will foster a too thickly set order of grapes, which will seriously interfere with the thorough curing of the interior berries, and thus militate against the quality of his crop. All educated visitors know that compactness or openness of clusters, in the same variety, depends largely upon the training and culture of the vine. No "bunch" of raisins look as well, or is intrinsically as good as an open, loose, fringy "stem" of raisins, of the same variety, and cured with the same care. Hence the variety of grapes which naturally assume this latter habit is, other things being equal, more desirable; and if it has not this habit pains must be taken by every producer who aspires to the highest excellence, to change the habit. The variety grown by Mr. Bugby has many excellencies. It "strikes root" from cuttings with great readiness, grows vigorously, fruits early, regularly and abundantly, is of fair sized berry, rich flavored (increased in the raisin), and its pulp, though not the most solid, as good that the shrinkage in drying is comparatively small. Yet it has the natural habit, and is very "set in its way," too, of clustering too thickly—i. e., it sets so much in a bunch as to require too much care and too much time to cure it properly, unless pains be taken to so cultivate and train the vine as to produce a change in this natural habit. The White Muscat of Alexandria is perhaps equal to the Fiber Szhagos in its propagating and growing qualities, while in the certainty of its crop, and possibly in its early bearing, it may not be equal, yet it is of finer berry, of more solid pulp (which loses less in drying), of equal flavor, and of so open, loose a growth as to be in this particular far the superior. These hints are thrown out as the result of long observation and some practical experience upon this subject as a specialty. We bid Mr. Bugby a most hearty God speed in his noble enterprise of stopping the importation of a quarter of a million dollars' worth of raisins annually on this coast. Mr. Bugby is entitled to a Premium for the best raisins.

Your committee are among those who have watched and worked in the fruit growing interest of this State from its beginning, and hence indulge another hint, viz: that fruit growers at once, and all the time, persistently and practically insist that, in fruit especially, quality and not size is the true test of excellence. And another, that there can never be attained the highest excellence in pomology without a careful study of the laws of adaptation—adaptation to soil, to climate, to season, and to circumstance. It is of no avail in our climate that experience authorizes the great pear-grower of New England, Hon. M. P. Wilder, to say that if he "must be confined to one variety of pear, it should be the Vicar of Winkfield." While his judgment is well founded there, it would be a gross burlesque here. The "Vicar of Winkfield" is a failure in California, not in size but in quality. Few men have grown it in this State without pecuniary loss; and after a trial of fourteen years, under every variety of advantage, if a fruit is still a failure, the whole community should discourage its farther propagation, especially when its place is more than filled by varieties far its superior in every quality that constitutes excellence. The above remarks apply with still more force (because it was never valuable except for the montrosity of its size) to the "Pound Pear." However large, they are no ornament to a fruit table in the eyes of any cultivated pomologist. While there may be many other suggestions of equal importance, these have impressed your committee as already "over due," and hence are made as a matter of duty, not of choice.

Your committee on Fruits beg leave to suggest that, in view of the great devotion to the interests of your Fair on the part of Mr. James R. Nickerson, of Placer county, and the large outlay to which he has voluntarily subjected himself, you, as a testimonial due to his enterprise, constitute him an Honorary Member of your body.

[The publication of these Reports will be concluded In our next.]

To Mining Secretaries.

We positively refuse hereafter to receive advertisements of any mining company for the payment of which the Secretary is unwilling to vouch. We shall also exercise the right to eject from our columns, at any time during the course of publication, any advertisement for which payment is not made, or security given upon proper notification.

DEWEY & CO.,
Publishers Mining and Scientific Press.

"STAND FROM UNDER."

On or about the 1st of January, 1865, we intend publishing a list of the Mining Companies which have long remained delinquent upon our books for advertising, together with the names of the Secretaries and Trustees, in cases where ample reasons for non-payment are not given. We intend that this list shall be a public warning. Let those interested read and heed.

SHERMAN DAY,
Mining Engineer,
No. 56 Montgomery Block, San Francisco,

Will examine, survey and report upon mines, and consult and advise concerning investments in mining property, or the machinery management and expenditures of mines.
22q*

HUNT'S NEW DITCHER,

HAVING SECURED FROM THE INVENTOR THE SOLE right to manufacture these Machines for the States of California and Oregon, and the Territory of Washington, I am now prepared to receive and promptly fill orders for these machines.

With the aid of three men and four horses this Machine will cut a ditch from two to three feet deep, as may be desired, dumping the earth all on one side so as to form a dike or embankment. For particulars send for circular, to

E. O. HUNT,
Windmill Builder, No. 28 Second Street and 110 & 112 Jessie Street, San Francisco. 9v22tf

Lancaster Gold and Silver Mining Company, Coino, Lyon County, Nevada.

Notice.—There are delinquent upon the following described stock, on account of Assessment levied on the 26th day of October, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
John Armitage	8	40	$20 00
H S McElroy	13	40	20 00
Wm Curry & Jones	25	40	20 00
R S Dumont	31 34	40	20 00

And in accordance with law, and an order of the Board of Trustees, made on the 26th day of October, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at public auction at the salesroom of Maurice Dore & Co., No. 227 Montgomery street, San Francisco, California, on the 14th day of December, 1864, at the hour of 11 o'clock A. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

J. S. MEYER, Secretary.

A fire-engine for the Russian Government has been manufactured by a London firm, and is a size larger than the engine which obtained the gold medal and first money prize at the contest in Holland. It will throw a jet of water one and a-half inches in diameter 200 feet high, and to a distance of 300 feet.

Out of the 300 people who undertook recently to cross a river near Cracow, Poland, in a grain barge, on their return from a religious celebration, 125 were drowned through the drunkenness and carelessness of the boatmen.

An artillery committee has reported to Napoleon the advisability of adopting the Prussian rifle for the French army.

New Mining Notices.

Crown Point Ravine Gold and Silver Mining
Gold Hill District, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of November, 1864, an assessment of two dollars per share was levied upon the capital stock of said company, payable on the 22d day of November, 1864, in United States gold coin, to the Secretary, at his office, or to Jas. V. Coffey, Virginia City, Nevada.

Any stock upon which said assessment shall remain unpaid on Saturday, the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturay, the 7th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. M. BUFFINGTON, Secretary.
Office, Nos. 8 & 10 Government House, corner of Washington and Sansome Streets, San Francisco. nov26-22-4

Empress Gold and Silver Mining Company,
Gold Hill Mining District, Storey Co., State of Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 25th day of November, 1864, an assessment of one dollar per share was levied upon the capital stock of said Company, payable on the 26th day of November, 1864, in United States gold or silver coin to the Secretary, at the office of said company, No. 540 Clay street, San Francisco.

Any stock upon which said assessment shall remain unpaid on the 30th day of December, 1864, will be advertised on Saturday, the 31st day of December, 1864, as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 20th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

RALPH EMERSON, Secretary.
Office, No. 540 Clay Street. nov26-22-4

Mammoth Gold and Silver Mining Company,
Rock Spring District, San Bernardino County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of the said Company, held on the 19th day of November, 1864, an assessment of sixty cents per share was levied upon the capital stock of said Company, payable on the 21st day of November, 1864, in United States gold or silver coin, to the Secretary, at the office of the company, No. 611 Clay Street, Room 8, San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 9th day of January, 1865, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

nov26-22-4 GEORGE BOWER, Secretary.

Ruba Gold and Silver Mining Company, Recse
River Mining District, Lander County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of November, 1864, an assessment of one dollar per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin to the Secretary, at the office of the Company, No. 36 Exchange Building, in the city of San Francisco, California, or to E. S. Davis at Austin.

Any stock upon which said assessment shall remain unpaid on Saturday the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 9th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

WM. W. KNIGHT, Secretary.
Office, No. 36 Exchange Building, Northwest corner Montgomery and Washington street, San Francisco.
nov26-22-4

United States Mining Company, Virginia District, Storey County, Nevada.

Notice is hereby given that the Annual Meeting of the above named Company will be held on Monday, December 26th, at 2 o'clock P. M., at the office of the Secretary, Nos. 8 & 10 Government House, corner of Sansome and Washington streets, San Francisco, Cal.

22-5 J. M. BUFFINGTON, Secretary.

United States Mining Company, Virginia District, Storey County, Nevada Territory.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of November, 1864, an assessment of one dollar per share was levied upon the capital stock of said Company, payable on the 22d day of November, 1864, in United States gold and silver coin, to the Secretary, or to Jas. V. Coffey, Virginia.

Any stock upon which said assessment shall remain unpaid on Saturday, the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 7th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

Office, Nos. 8 & 10 Government House, corner Washington and Sansome Streets, San Francisco, Cal. nov26-22-4

Notice.

THE Annual Meeting of the Stockholders of the Colorado Silver and Copper Mining Company (Arizona Territory), will be held at the Company's office, No. 523 Clay street, San Francisco, on Monday, December 26th, 1864, at 3 o'clock P. M., for the election of Trustees, and the transaction of any other business that may properly come before it.

21-4 B. W. MUNOE, Secretary

How to Live Long.

To lay the foundation for a long life, both body and mind must practice industrious activities. The hod-carrier works the body hard and the brain almost none; the power of the one is used up, that of the other is not used at all, and he dies of some speedy, fatal disease. The mere student exhausts the brain; the body is not worked at all, and he, too, dies early, with some acute malady. The farmer works his body hard; is in the open air all the time; eats plain food; retires early; rises with the sun; indulges in no irregular habits; but his mind, beyond a certain routine, which soon becomes mechanical as to prices, crops and the weather, has no waking-up activities; and he, too, dies before his time, or vegetates in an asylum.

But the hunter, without the advantages of the regularity, abundance and comfort, of the farmer's home, in spite of sleeping on the damp ground, and going whole days without food; in spite of summer's suns, and winter's snows, and the cold, raw rains of spring and fall, lives to the utmost verge of man's allotted time, and why? His bodily activities are steady, but they are moderate in the main, while the almost incessant look out for game, and the multitudinous devices necessary to outmanœuvre the instincts of the animal creation, keep his wits alive, and they all become as keen and agile as his own restless and piercing eye.

The agencies of long life to the nobility of Great Britain, are their love of travel, hunting and the saddle, in early years; while in latter life they avoid exposures and loss of rest and sleep and food, and, in the fullest sense of the phrase, "take things easy." They know that they are provided for beyond a peradventure, and quietly and securely pass along the stream of life, until it empties into eternity's ocean.

As to great scholars and thinkers, such as Newton of the past age, and Humboldt of the present, their love for study so took away their love of eating, that it was nearer a mechanical necessity than an animal delight; so that they ate but little, and in such proportion had less need for exercise; while it is a physiological fact that mental labor increases our hold on life by its developing and enlarging (as all physicalities enlarge by exercise) the capacities of the brain.

Up to forty-five, the bodily constitution is knit, built up, is consolidated by wise labors, if the mind also is kept in the exercise of healthful activities. The same hard labor after forty-five, so far from from building up, destroys; but while that is the case, mental toil builds up the body, its effect is to increase the capability of living. Hence a man who works his body pretty hard and his mind rather more moderately up to forty-five, has done most towards securing a lasting constitution; and if then he begins to work the body less and the mind more, he adds to that lastingness, and bids fairest to live to eighty or a hundred years. This article merits the mature reflection of every reader, for it is true literally that "out of it are the issues of life."—*Hall's Journal of Health.*"

How to Cultivate a Talent for Drawing.—The ability to delineate objects of nature and art is not only one of the most graceful, but most useful accomplishments, and should be cultivated by every person who has a taste for it, and especially should it be fostered in childhood. On this subject, Ruskin, the eloquent writer on architecture, painting and the ornamental arts, says:—

"If a child has talent for drawing, it will be continually scrawling on what paper it can get; and should be allowed to scrawl at its own free will, due praise being given for every appearance of care or truth in its efforts. It should be allowed to amuse itself with cheap colors as soon as it has sense enough to wish for them. If it merely daubs the paper with shapeless stains, the color box may be taken away till it knows better; but, as soon as it begins painting red coats on soldiers, striped flags to ships, &c., it should have colors at command; and, without restraining its choice of subject in that imaginative and historical art, of a military tendency, which children delight in (generally quite as valuable, by the way, as any historical art delighted in by their elders), it should be gently led by its parents to try to draw, in such childish fashion as may be, the things it can see and likes—birds, or butterflies, or flowers, or fruit. In later years the indulgence of using the color should only be granted as a reward, after it has shown care and progress in its drawings with pencil."

An author's printing press is a pulpit where from he preaches to all men; for an author is town chaplain of the universe. A man who is making a book will scarcely hang himself.

Volcanic Smelting Furnace.
PERSONS desiring information as to the Use and Economical properties of this Furnace, and intending to make use of the same, when satisfied of its superiority over all other means of reducing ores and separating metals from the sulphurets, can obtain all needed explanation and advice in regard to the same, and the terms of sale of rights to use the same, on application to Col. J. D. Stevenson, or Mrs. E. J. Hall, Proprietress, 633 Third street, San Francisco.
Drawings may be seen at the office of Col. J. D. Stevenson, No. 614 Merchant street.
The time required for reducing ores by this Furnace is from one to eight hours, and the amount of fuel only one-tenth as much as is consumed by other processes
The process of condensation is applied to this Furnace which will save all those portions of precious metals which usually escape in a volatile form.
The attention of all interested in the subject is requested to examine the important results obtained by this process.
Parties wishing will be allowed to erect a trial furnace of a capacity for smelting one ton or more, on signing an obligation to pay the usual fee for the right to use it, should they continue to make use of the invention for a longer period than two months.

San Francisco, May 10th, 1864. 20

Machinery and Physical Development.

The beneficial influences of machinery upon the human race are manifold and various. The greatest attention has been given by writers and thinking men and women to those which tend to produce a higher degree of civilization; but there is one of no less importance which has never received the attention it deserves, viz: the influence upon the physical development and health of the working population of civilized countries. This influence, though not yet visible in a marked degree, cannot but make itself apparent in future generations. It will be great, even in our own country, where we seldom find that a whole family of sons follow the same occupation as their father; but of course much greater in European countries, where it frequently happens, especially in certain localities, that the same kind of labor is performed by generation after generation of the same family, and in many cases by both sexes. Consider, for example, the coal-miners of England, who work as beasts of draft and burden in narrow, subterranean passages, causing an unnatural development of some parts of the body at the expense of others; or the dry grinders of needles and cutlery, whose diseased lungs, emaciated frames, and short lives become hereditary.

The amelioration of the physical condition of the latter class of operatives has already been effected, and to some extent their lives have been prolonged, by the introduction of a simple fan-blower, by which the fine particles of steel and stone are conveyed away from their mouths and nostrils, and outside of their workshops into the open air; and there is little doubt that the introduction of machinery for mining, which has already begun to take place and promises to extend itself rapidly, will soon effect a corresponding improvement, though in a different way, in the class first mentioned. In a few generations this machinery will doubtless effect such a change in the population of the mining districts as to give them the appearance of a different race.

There are, in our own country, workers in various arts and trades, the exercise of which, by hand, require the body to be continually in one position, or the violent exercise of some muscles while the others are at rest, who are being and will still further be similarly benefited, in a greater or less degree, by the introduction of machinery. In the female portion of our population, a marked improvement in physical development is being and will still further be brought about by the introduction of that woman-saver, the sewing-machine, in the use of which the unnatural position which becomes habitual in constant application at hand-sewing is avoided, and a gentle exercise of the whole body is required.

Much more might be said upon this subject, if space permitted; but we will conclude by hoping for the speedy arrival of the time when, to use the words of an eminent foreign writer, "the inanimate powers of nature will furnish all the labor, and human beings will only be required for its supervision." "It will be a glorious time," continues this writer, "when the minds and bodies of the people shall be equally developed by meutal and physical gymnasties, and there shall be no brawny arms upon thin legs, and other monstrous and unequal developments.—*American Artisan.*

REESE RIVER VEGETABLES.—The *Reveille* says that D. H. Palmer raised this season, on his ranch at Big Creek, upon a little less than an acre of ground, 5,369 pounds of potatoes. He won a wager of ten dollars on the result. This is the largest yield we have heard of. Who can beat it?

WESTERN agriculturists, as a class, are represented as exceedingly comfortable in regard to money, owing to the high prices of grain.

IMPORTANT DISCOVERY

—IN THE—

Photographic Art.

Jacob Shew's

CHROMATIC PROCESS OF PRINTING

PHOTOGRAPHS.

[PATENT APPLIED FOR.]

THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a

SOFTNESS, CLEARNESS AND DELICACY OF TONE

unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.

In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.

"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.

☞ The public are invited to examine specimens at my Gallery. ☜ **JACOB SHEW.**

6-tf 315 Montgomery street, near Pine.

RAILROAD HOUSE.

316, 318 & 320 Commercial Street,

SAN FRANCISCO.

THE Undersigned respectfully notifies his Patrons, and the Public generally, that he has assumed the entire charge of above popular House, and having had it thoroughly renovated, he flatters himself it will compare favorably, in point of comfort and cleanliness, with any House in the city. It is his intention to make it a First Class

Family Hotel.

Being conducted on the European plan, it is not only the CHEAPEST RESPECTABLE HOTEL, but the most convenient as guests can choose their own hours of eating. The Restaurant is now conducted by G. V. DAWSON, Esq., formerly of Sacramento, late of Marysville, whose name is a sufficient guarantee of the best of living.

The Railroad House Coach conveys passengers to the hotel FREE. Barber Shop, Bath Rooms, Steam Baths, etc., connected with the House.

18-q **C. L. ROSS, Proprietor.**

SIENTIFIC AND MINING JOURNAL.—This is as valuable a publication as is produced on the Pacific Coast, and one which interests all parties. It contains much that is instructive and entertaining, and seems to have the right men at the head of its affairs.—*Spirit of the Times.*

THE PACIFIC IRON WORKS,

First & Fremont Sts., between Mission & Howard, San Francisco.

The proprietors of the above works, invite the attention of all parties interested, to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated

Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.

GODDARD & COMPANY.

Machinists and Foundries.

VULCAN IRON WORKS CO.,

[ESTABLISHED 1850.]

No. 137 and 139 First Street.

IRON FOUNDERS, STEAM BOILER-MAKERS AND

STEAM ENGINE BUILDERS.

THE Machine Shop possesses the greatest number and the largest dimentions of Tools in the State. They have Laths to turn nine feet in diameter and thirty feet long. Their other facilities for executing work rapidly and efficiently are unsurpassed. Upwards of 300 STEAM ENGINES, made at their own Works, are now running in this State and Oregon, in Steamboats, Quartz Mills, Saw and Flouring Mills. Their BOILER WORKS have turned out upwards of 600 STEAM BOILERS of all kinds.

MACHINERY

Quartz Mills, Flour Mills, Hydraulic and other Presses, Hoisting Machines, Gearing Pullies, Gudgeons, Boxes, Hangers, etc., in Great Variety.

Quartz Stampers, Shoes & Dies,

Warranted to be made of the very hardest and toughest Iron.

RAILROAD MACHINERY, LOCOMOTIVE, CARS, CHILLED WHEELS AND TIRES, ETC.

A Published list of the Patterns of these Works will be sent on application.

MANUFACTURERS OF

JONVAL'S TURBINE WATER WHEELS,

The Cheapest, most Portable and Effective Machine ever invented for the application of Water as a Motive power. These Wheels are made entirely of Iron, simple, and not liable to get out of order.

☞ A DIPLOMA was awarded to this Company for the *Best California-Made Steam Engine*, by the Mechanics' Institute, September, 1857. 13

Volcanic Disturbance in Costa Rica.

A heavy shower of ashes fell on the 16th of October in Costa Rica, which has been traced as having its origin in the volcano of Turrialba. According to the *Gazette Official*, of 9th October, the ashes continued falling three days and three nights in the Valley of San José, exciting much alarm in the minds of the inhabitants. The Governor of Cartago was induced to send a commission of mountain travelers to inspect the volcano, which has been emitting, for several days, columns of dense smoke. On the 27th, the Commissioners started from Cartago, and on the 29th reached the farm of San Martin, where the ashes lay one foot thick on the ground, increasing in depth as they reached the Lagoon, where they encamped, at the foot of the volcano. During the night they were alarmed by the constant subterraneous noises which proceeded from the bowels of the earth, and sounding like the detonations of angry surges on a rock-bound barrier.

On the 30th they ascended to the summit of the volcano. A mass of smoke was rising twice the hight of that which was seen during the last eruption in February. Its color was between black and green, and was mixed with huge volumes of blue flames, accompanied with violent tremors of the earth and deep rumbling sounds. After the smoke and flames had been vomited out, one wide crater was seen "almost round, and deep as the veritable portals of Tartarus," with the infernal walls of a yellowish and black hue, as if lined with a varnish of resinous compound. From the profound depths of the crater a pestiferous odor ascended, and the rumbling sounds at each moment became more and more alarming.

The mountaineers noted that San Carlos, the north peak of the crater, had entirely disappeared into the abyss. The mountain, a very large one, is entirely covered with the ashes to the depth of three feet, and the country around, for nine miles from the mountain, is also covered with the ashes.

On the east side of the volcano, and about five hundred yards from the crater, a stream appeared, whose waters are extremely acid, perhaps containing sulphuric acid. On the northeast side, towards the river Torturego, all vegetation has been destroyed for many leagues. The mountaineers declare that at each step the earth seemed to rock to and fro under them, and that the heavy torrents of cold rain, the want of fire, and other difficultiee, did not permit them to remain on the summit longer than four hours.

THE FURNACE FOR GOLD.—The ore lay in the goldsmith's shop, rude and unrefined. How the costly vessels, pure and polished glitter before it.

"Ah, that I were such as you!" cried the ore. "I am gold, even as you are; but where is my beauty? where my glory?"

"Wait awhile," said the shining vessels, "your time will come. But if you would really be as we are—a lot to which you are destined—remember not to fliuch from the process that awaits you."

So the ore was cast into the furnace, and it moaned and bewailed the fierceness of the flame.

"You were not satisfied when buried in natural dross; you are not satisfied now, while being forced to part from it," said the shining vessels. "But when you come forth from that furnace without blemish, ready to be wrought into a king's crown, and take your place by us, you will forget the flame that scorched and purified you, and love the refiner who loved you too well to keep you in the furnace one moment less than was necessary."

SILVER ORE DISCOVERED.—The Victoria (V.I.) *Chronicle*, of 9th November, says: We learn from Mr. Dean, of this city, that a handsome lode of silver has been discovered at Mud Hill, thirty miles from Nisvually, W. T., in the direction of Mount Rainer. Mr. Higgins, in charge of the Hudson Bay Company's store, and several employes, have left for the newly-discovered mines. Great excitement exists in Steilacoom, where the stores have been closed by the proprietors, who have gone out in search of the lode.

MORE than nine thousand different kinds of animals have been changed into stone. The races or genus of more than half of these are now extinct, not being at present known in a living state upon the earth. From the remains of some of these ancient animals, they must have been larger than any living animal known upon the earth.

THE Queen of Spain has given a flattering reception to the Envoy of the Emperor Maximilian, and expressed her desire that a good understanding should exist between Spain and Mexico. Italy, Switzerland and Portugal, have followed suit.

EIGHTEEN thousand miners are now on a strike in England.

STILL IMPROVING!

VOLUME IX

—OF—

The Mining and Scientific Press

COMMENCED

ON THE FIRST OF JULY, 1864,

WITH

An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

Journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prespectors,
An Economist to Millmen,
An Assistant to Active Miners,
An Economizer for Mining Advertisers,
Reliable Reporter for Shareholders.
Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Refleotor for Patentees,

And a Helpmeet to all Industrial Classes,

fact, upon the Pacific Coast. We shall give accurate and quent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies. Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

Office in Government House, Nos. 11 and 56, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

Reports of the Exhibition.—Owing to the omission of exhibitors of certain classes to elect committees of award, the Executive Committee of the Institute, at its meeting of Oct. 27th, authorized the President to select a special committee to act in the premises and report upon articles thus inadvertently omitted from the several reports. The report of this special committee, together with a general report of the Executive Committee, will appear in due time.

To News Agents.—After this date we shall furnish no dealers, outside of this city, with the PRESS upon any other terms than those of regular subscription. Those who will forward us the names of new subscribers shall receive liberal commissions.

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal news agents.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alteration, which they may desire made in their advertisements, at their earliest convenience. New advertisements should be sent in as early as possible.

DEWEY & CO., Publishers.

Office, 11 Government House, corner Washington and Sansome street, San Francisco.

"THE MINING AND SCIENTIFIC PRESS."—We would call attention to the advertisement of "The Mining and Scientific Press," (Messrs. Dewey & Co., Proprietors), one of the best conducted and most valuable weekly journals published in America.—*Golden Era.*

Bound Copies for Sale.—Bound copies of Volume VIII, complete, of the MINING AND SCIENTIFIC PRESS, from January 1st to July 1st, can be procured on application to the office.

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office

GEO. B. HITCHCOCK & CO.,

Counting-House Stationers,

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

INVENTORS AND INVENTIONS.—Let us not cheapen inventions, but be kind to the inventors; beware of killing the goose that lays the golden egg! Many inventors die before the hour of triumph; others falter by the way. Invention is a struggle, a conflict, almost a battle; if the victors are rewarded, the dead are honored and the wounded carefully attended to. Glorify the inventors who succeed; cover with an indulgent self-respect the faults of those who fail; and soothe the last years of the wounded—those invalids of industrial science who have known only the pains of the fight, and always remained ignorant of the joys of victory. —[Dumas.

Mining Notices--Continued.

Ashland Mining Company, Moss Lode, Colorado Mining District, Arizona.

Notice is hereby given that at a meeting of the Board of Trustees of said company, held on the 16th day of November, 1864, an assessment of 50 cents per share was levied upon the capital stock of said company, payable on the 17th day of December, 1864, in United States gold coin, to the Secretary, at his office, No. 613 Montgomery street, San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday the 17th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday the 3d day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

CEO. T. KNOX, Secretary.
Office, No. 613 Montgomery street. nov19-21-4

Arizona Consolidated Mining Company, Eureka District, Arizona Territory.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 19th day of October, 1864, the several amounts set opposite the names of the respective shareholders as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Butler, Mrs S F	154	half 17	$3 40
Hardy, L J	152	half 4	80
Level, George	33	half 28	5 60
McNeil, Patrick	25	50	10 00
Smith, George	39	half 43½	90
Sommers, Simon	44	25	5 00
Spann, J S	209	25	5 00
Wilson, John	75	5	1 00

And in accordance with law, and an order of the Board of Trustees made on the 19th day of October, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the salesroom of John Middleton & Son, No. 400 Montgomery street, San Francisco, on the 3d day of December, 1864, at hour of 11 o'clock A. M., of said day, to pay said delinquent assessments thereon, together with costs of advertising and expenses of the sale.

N. G. FRENCH, Secretary.
Office, 728 Montgomery street, San Francisco. 21

Bella Vista Gold and Silver Mining Company, Cacachillas District, Lower California.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 11th day of November, 1864, an assessment of 65 cents per share was levied upon the capital stock of said company, payable on the 12th day of November, 1864, in United States gold coin, to the Secretary, at the office of the company, No. 326 Clay street.

Any stock upon which said assessment shall remain unpaid on Saturday, the 17th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday the 31st day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. FULLER, Secretary.
Office, No. 326 Clay street, San Francisco. [nov19-21-4

Blue Ledge Gold and Silver Quartz Mining Company, Kelsey District, El Dorado County, California.

The office of the above named company has been removed to Room No. 5, Government House, on the corner of Washington and Sansome streets. V. B. POST, Secretary.
San Francisco, November 14, 1864. 21

Bay State Gold and Silver Mining Company. Turnback District, Tuolumne County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 9th day of November, 1864, an assessment of 25 cents per share was levied upon the capital stock of said company, payable on the 10th day of November, 1864, in United States gold coin to the Secretary, at his office.

Any stock upon which said assessment shall remain unpaid on Saturday, the 10th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 27th day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. F. HARRIS, Secretary.
Office, S. E. Corner of Second and Howard streets, San Francisco. nov12-20-4

El Toro Gold and Silver Mining Company
Concordia District, Panuco, Sinaloa, Mexico.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 21 day of August, 1864, an Assessment (No. 4) of $2.00 per share was levied upon the assessable stock of said Company, payable on the 24 day of September, 1864, in United States gold coin to the Secretary at the office office of the Company, No. 617½ Montgomery street, San Francisco, California.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 17th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday the 31st day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

FORD H. ROGERS, Secretary.

Office, No. 617½ Montgomery street, San Francisco, Cal.

"Mining and Scientific Press."—This excellent and valuable paper has been enlarged by the addition of sixteen columns. It is one of the most complete and interesting mining journals in the United States.—*Daily American Flag.*

THE female colliers in the colliery districts in England, wear breeches, shirt, coat and hob-nailed boots.

ONE of the most curious and interesting discoveries for some years at Pompeii has just been made. It consists of a large, square, white, marble block, upon which is carved an almanac, with some extraordinary and interesting data.

THE reported discovery of extensive Roman remains found in the river Mersey, near Runcorn, proves to be a hoax. The alleged details were printed in full in the English papers.

THE more we know the less we say. At death a man arrives at immense knowledge, and doesn't open his mouth.

THE average dividends of the Massachusetts Banks this year have been eight and three-tenths per cent.

THE largest cotton mill in the America is at Baltic, Conn. It is owned by the Rhode Island Spragues.

ENLARGED.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Mining and Scientific Press Patent Agency,

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be witheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do, is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his inventiou is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, and new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the setler, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

THE WRONG SIGN.—The *Alta* of Sunday says that the "sign" of the MINING AND SCIENTIFIC PRESS, blew down in the gale of Saturday last, endangering the lives of passes by, etc. Not so, neighbor; all work done by the MINING AND SCIENTIFIC PRESS firm, is warranted safe and correct. It was another sign, which blew down from the Government Building, to the great fright and danger of passers by, on the day aforesaid.

Improved Evener and Whiffletrees.

This is an invention patented, in May last, in the Atlantic States. Mr. William Saunders has the exclusive agency for the same on this

coast. The above cut gives a very correct representation of the construction. The upper one represents the evener for two horses complete; the lower one represents the same for three horses. The chief principle involved in this invention is the pulley arrangement, which, it will be seen, makes the apparatus more compact and perfect than any other arrangement for a three-horse draft. It will be perceived that the outside horses draw from a hook upon the outer end of each whiffletree, and one end of the straps passing round a pulley attached to the inner end of each whiffletree, while the inside horse draws from the two opposite ends of the straps passing around each pulley. It will be seen that the peculiar attachment of the whiffletrees to the evener equalizes the draft perfectly between the animals. It will also be seen that when two horses only are employed, no whiffletrees are employed—the pulley obviating the necessity of the whiffletree.

This invention was exhibited at the late Mechanics' Fair in this city, and favorable mention was made of it as one worthy of a premium. Mr. Saunders, the agent, may be addressed by letter through the Postoffice in this city. Orders may be left with Gallagher & Rodecker, No. 115 Pine street, with whom arrangements have been made for their manufacture. County, State and Territorial rights can be purchased of the agent on favorable terms.

MINING ADVERTISING.—We understand that the Open Sesame mining company have re-advertised their last delinquent list in consequence of doubts entertained by some of the directors with regard to the legality of the first advertisement, from the fact that each certificate of stock was not separately enumerated, with the number of shares which it represented.

IMPORTANT TO MINE OWNERS.—We would call the especial attention of mine owners to the advertisement of Mr. J. Mosheimer, in another column, who proposes to erect furnaces and reduction works for such as may desire them. Mr. Mosheimer has had a large experience in the reduction of mineral ores, having been extensively engaged in such operations in this city, in the early days of the Washoe discoveries. Mr. M. has just returned from Europe, where he has spent some two or three years in carefully examining all the latest processes of reduction and working various ores, which are now employed both on the Continent and in Great Britain. We would again call the attention of mine owners to Mr. Mosheimer's advertisement.

AT WORK AGAIN.—We understand that the Antioch Copper Smelting Works have again commenced operations. The fires were re-lighted about two weeks since. We have no further particulars.

MINING AND SCIENTIFIC PRESS.—This well conducted journal has entered upon its ninth volume. It is a sterling periodical, and deserves encouragement.—*Territorial Enterprise*

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

Interesting Geological Facts in Connection with the Gravel Ranges of California.

Editors Mining and Scientific Press:—I regret to learn that my much respected friend (if I may be allowed the mournful privilege of so calling one with whom I had not the pleasure of a personal acquaintance, and whom I never happened to meet, except through the medium of your columns, as an "Enquirer," in the character of friendly controversy), "E. A. M.," or as he more frequently signed himself "Pundit," is beyond the reach, not only of the questions of "Enquirer," but of all other "would be thought to be" scientific scribblers, who have a chance to yet learn a great deal more than they have learned, on not only scientific subjects, but on gentlemanly courtesy towards others whether living or dead. I now have in my minds eye two individuals, one, who in eulogising the late "E. A. M.," (who was certainly deserving of every word of praise said of him,) took occasion to speak very contemptuously of Professor Silliman, or one of his theories, in that connection, making it utterly impossible, that the Professor should defend himself, without appearing in the unenviable position of attacking the memory of the dead, for whom, perhaps, the Professor has as great respect, as has the writer of the eulogy himself. The other, is your learned contributor, who signs himself 'F. A. H.," who, not content with the light of science alone, calls in the light of Divine Revelation, in order to prove his theory of the "fire and brimstone" origin of quartz ledges.

Now, Messrs. Editors I do not propose to either deny or assent to any part of "F. A. H's" reply to "Pundit," for the simple reason, that after twelve years practical experience in the mines of California, with, to commence on, what I then thought a pretty thorough theoretical or (as some call it) book knowledge of Geology, Mineralogy and Chemistry, I have come to the conclusion that I do not yet know half so much of any one of these subjects as I then thought I did. But with your permission, I will cite "F. A. H." to a book on the subject, which he may not yet have read, and which may shake his faith in the fire and brimstone or sulphur theory. The book to which I refer is the great hydraulic mining region or auriferous gravel deposit of this State.

The chapters with which I am the most familiar, and to which I will refer him, are, Nevada and Placer counties; and the particular verses are Quaker Hill, Sailor Flat, Hunt's Hill, Red Dog district, Chalk Bluff, the town of You Bet and adjoining mines, Waloupa, Brown's Hill, Little York and adjacent mines, Dutch Flat and the immense gravel deposit that surrounds it on all sides, Gold Run and Cold Spring Hill district, and last, but not least either in extent, richness or number of words upon words, precept upon precept, that it will offer on this interesting subject, I will name Iowa Hill, and the whole adjoining mining section between the North and Middle Forks of the American river.

And now with regard to what is recorded in nearly every one if not all of these verses: First, examine any one of the thousands of tunnels, that are run through the bed-rock (mostly slate), from the side of the hills facing the deep cañons into or under the basins containing the auriferous gravel deposits. In these tunnels we find ledges and seams of quartz, varying in thickness from many feet to the fraction of an inch, and of all colors and all degrees of hardness and compactness, from that so hard and compact as to almost defy the drill, to that so soft and fragile as to scarcely bear its own weight, being in fact a mass of delicate crystals, but slightly attached to each other, or to the wall rock on either side of the crevice or opening in the slate rock; and these delicate, fragile veins are frequently in the immediate vicinity and often cross the larger and more substantial ones. These delicate veins of quartz are oftenest found in what appears to be openings in the rock of comparatively recent date, for they seem to have been caused by the breaking down or sliding of the hill in the direction of the cañons; and this breaking down of the rock and sliding of a part of the hill, must necessarily have happened since or during the wearing and washing away of the rock that occupied the place of the cañon, as these seams are never below the bed of the cañon nor cross it. So marked is this feature, that seams of this kind, found in the bed rock, are easily traced up through the gravel deposit which overlies the bed rock. The break and slip of the different strata of gravel, sand and pipe clay, being as clearly defined as the faults in a coal vein, it frequently happening that boulders are broken apart and sometimes the bodies of petrified trees, that are often found deeply buried in these deposits, (and which, in some localities, instead of being petrified are turned to stone coal,) are broken short off. And now we come to the strangest and most interesting part of the chapter; it frequently happens that when the slide has been so slight as *not* to move the upper edge of the slipped half of the parted boulder to a position entirely below the lower edge of the half that did not slide, and more especially when the fractured faces are but slightly parted, they are often again united by a layer of quartz rock which does not extend beyond the surface of the boulder itself; and yet, further, the broken ends of the petrified log are sometimes again united in the same way. Also, timber, that has every appearance of having been partially decayed at the time of its being buried (and in which the rotten knots and worm holes are as plain as in any old log,) is often found, in which the worm holes are lined with delicate quartz crystals projecting inwards and interlacing each other, and the holes frequently filled with solid rock, no part of the timber (so far as I could judge) having the least appearance of the effect of fire or heat.

If any person wishes to examine this subject for themselves, let them go to the mines, near the town of You Bet, in Nevada county, and they can see hundreds of tons or cords if they choose, of this sort of timber, that has been sluiced out and is now lying on top of the ground, besides many other interesting facts, that I have not time here to enumerate, nor sufficient scientific knowledge to explain.

T. McA.

[Written for the Mining and Scientific Press.]

VIRGINIA CITY CORRESPONDENCE.

BY A SPECIAL CONTRIBUTOR.

Editors Mining and Scientific Press:—Brighter days seem to be dawning again upon the State of Nevada. Not only has the re-election of Mr. Lincoln, the election of an honest and able Governor, and of an irreproachable Judiciary, inspired all property-holders with confidence for the future, but the developments which are continually being made along the whole line of the Comstock augur well for the permanency of our mines. Business will, by all appearances, be very brisk during the ensuing summer; and if the speculative public will abstain from rushing blindly into "wild-cat" stock, and will confine their investments to those mines which have a legitimate title and a fair prospect of success, everything will gradually settle down upon a solid and permanent basis.

It may not perhaps be out of place in this, my first letter, to make a few remarks upon the theories which now obtain as to one or more ledges. Having, during a long residence in this city, carefully studied the geological formations, and having had the opportunity of continually investigating the developments made in the various mines along the Comstock ledge, I am forced to come to the conclusion that, wide as the vein is at surface, much as for the first 200 or 300 feet the existence of large "horses" of porphyry and clay seams may seem to point to the existence of separate and distinct ledges; yet, notwithstanding these surface indications, when I go into the lower workings of our deepest mines and see that these dividing masses are all giving out, and that the vein, assuming its true and regular dip, and narrowing down to a reasonable width, is composed entirely of quartz or other vein matter, I am forced, I repeat, to the conclusion that *along the eastern slope of Mount Davidson and the elevations adjoining it, there is but one, and only one, ledge.* This opinion I know is totally at variance with that entertained by a large portion of the community; but "to this conclusion must they come at last," even though it should take, as it probably will in Gold Hill, a depth of 1,000 or 1,500 feet to prove it. The fact is, that so long as stockholders in wild-cat claims, led on by the false statements of unscrupulous trustees and superintendents, will continue to furnish money for purposes of litigation, so long will the plainly demonstrated fact of one ledge be attempted to be ignored, and "jumping" companies will endeavor to establish their thieving titles on the appearance of the vein as "seen shallow," utterly regardless of the developments made hundreds of feet below their coyote holes by the rightful owners whose locations they invade. I write upon this disputed question because it is one which, while of such vital importance to the mining interests of this place, has only of late, when the various workings have attained a depth sufficient to demonstrate clearly the existence of one or more ledges, enabled all unprejudiced minds to come to a practical conclusion on the subject.

It is my intention, in a future letter, to attempt to give a list of those mines which are considered by the most competent judges to have an indisputable title to the ground they hold, and which, however much they may be harassed and pestered by jumping claims, will nevertheless eventually establish beyond all question, and beyond all fear of interruption, their inalienable right. As this, however, is a statement which will require some time and care in its preparation, I will defer it for the present.

I have no new discoveries to record within the last few days. The pay ore in the Hale & Norcross has not turned out as well as was expected; but I have no doubt whatever but that at a greater depth the mine will become permanently and profitably productive. The fact of its being situated between the Chollar and Potosi on the one side, and the Savage on the other, speaks well for its chances of success, especially when we consider that it is a location of only 400 feet. It is a great pity, however, that the shaft is sunk so far to the west, as they are obliged to sink all the time in hard country rock, every foot in depth carrying them nearly the same distance further from the lode. The Chollar is developing fine bodies of ore, and I confidently expect, ere long, to see this enter the list of dividend-paying mines. Of its neighbor, the Potosi, but little can be learned, pending the decision of Judge Mesick in the lawsuit between it and the Bajazet. If rumor, however, can be believed, it is one of the richest mines in the State. If the Chollar and Potosi stockholders will mutually consent to drop all imaginary differences, and each be content with what they have, a long career of prosperity awaits them both, assuming, of course, that their troublesome parasite above mentioned is at once and forever effectually "squelched." Nothing of any value has been struck as yet in the Sierra Nevada, but the indications in drifting east are of a very favorable character. Patience and perseverance will, without doubt, meet their reward in time. The water is not out of the Central shaft yet, so that the Ophir people are still waiting to know what they have got. If it should prove to be a vein of pay ore (and by this irruption of water it must be a vein of some kind,) it would help this place wonderfully.

Virginia City, Nov. 22, 1864.

Copper Ore Shipment.—The British ship *Magellan* is lying at North Point dock, taking in a cargo of copper ore, to be discharged at Swansea, Great Britain. She will carry hence over 1,000 tons, and the shippers calculate that it will bring them about $80 per ton at Swansea.

[Written for the Mining and Scientific Press.]

Cement Manufactory at Benicia.

On the road from Vallejo to Benicia the hills are covered either with loose boulders or outcroppings of veins of hydraulic lime, commonly called "Cement Rock." These are collected and carried to the Cement Works for about four dollars per ton. If the proper kind of stones are used, the cement manufactured therefrom is far superior to that commonly imported here from the Eastern States. With Mr. Winkle, the President and manager of the Pioneer Cement Company, I visited their works, which are situated on the bay shore about two miles below Benicia, where the company have built a wharf to a depth of water sufficient to admit any kind of vessel to load alongside.

The works consist of two large draw kilns, capable of burning about 500 barrels per day. They use coke and coal screenings. After the rock is burnt, it is broken in an iron breaker, and from there carried by elevators to the mill, which consist of an ordinary pair of burr stones, and is capable of grinding from 80 to 100 barrels per day. This finishes the operation of making cement. It is then packed in barrels and sent to San Francisco and a market. Heretofore all the Cement used in this State was imported from the Eastern States or from Europe, and was held sometimes as high as $8 to $12 per barrel. There are still parties here who import some from abroad, but I am sure they will gradually give it up, as the article manufactured in Benicia is far preferable to the imported. I enquired of several bricklayers which they prefered—the Benicia or Eastern cement, and found that they entertained strong prejudice against the home made article, which they asserted *sets too quick.* I should think that this fact spoke rather in favor than otherwise. I understand that in order to suit the taste of those who use the cement the manufacturers here have to mix the best Cement Rock with an inferior mixture of shell and clay, which of course does not improve the quality but satisfies the consumers, and also the manufacturers as they can produce the latter article cheaper.

I am sure that by the proper selection of the rock we can obtain here better cement than any imported and at less expense, and whenever the City of San Francisco builds up the so often projected water-front, they will find in the Benicia cement as good an article as will be required for the purpose. It is a matter of no little importance that we here have one more article of California production, for which large sums of money have heretofore been sent abroad. The manufacture of cement will not only be a remunerative undertaking to the company but also to the consumers, who will get a better article at less cost.

J. Mosheimer.

Electoral College.—The California Presidential Electors—Messrs. Samuel Brannan, J. G. McCallum, W. W. Crane, Charles Maclay and Warner Oliver—will meet at Sacramento on Wednesday, the 7th day of December, to prepare their votes for the Electoral College, and select one of their number to go to Washington with the important commission. Mr. Brannan will probably be awarded the honor of carrying California's endorsement of Abraham Lincoln to the Federal sent of government.

The Mining Survey on the Comstock ledge, to which we alluded at some length last week, it would appear from the following, which we clip from the Gold Hill *News*, is in full progress:—"We notice that the "Mining Survey" spoken of in these columns about ten days ago, is actively progressing, and that a first section of the plan, including the Daniel Webster, Buckeye, and other valuable mines in the vicinity of Silver City, will be in the hands of the engraver in course of the ensuing week. Superintendents and managers who desire to have their property noticed, should lose no time in communicating their intention to Captain Burgoyne, at Silver City, or to the Chief in the field, as the survey is progressing rapidly, and the primary triangulating will be completed within ten or fifteen days at farthest."

VIRGINIA CITY, UNDERGROUND.

Few, even among the residents of Virginia itself, above ground, have more than a very vague idea of the extent of the thoroughfares meandering in almost every direction hundreds of feet beneath the streets of that city. The "local" of the Territorial *Enterprise*, has been taking a stroll through those underground ways, and writes of them as follows :—

Few think, as they walk the busy streets of our town, that beneath their feet are streets almost as busy; that far down in the ever present midnight of the foundations of the mountains are crowds of men toiling as toil those above for gold and for bread. Many things to gratify the eye and afford food for the mind may be met with during a stroll through our streets above—our bright sunlit streets; let none conclude that there is nothing to be found to please the sight or excite reflection in our streets below—our dark night locked streets. Descending at the Chollar works, by a perpendicular shaft over four hundred feet in depth, one may wander off in almost any direction. By two or three different roads we might travel eastward nearly half a mile, finally coming out to the light of day in the southeastern suburbs of the city, among mills and miners' cabins; but we will take another course. Leaving the village of the Chollarites, we travel northward. Along the sides of the narrow streets are glimmering lights—some twinkling far ahead like distant stars, and others flashing suddenly upon us as we turn the corners with a blinding affluence of light. As we proceed on our journey we meet with many picturesque groups of miners at their labors. Here they are delving out chambers in the precious silver rock, and there hoisting into place the stout timbers that are to support the mountain and the city above. We pass through roomy caverns, whose space robs our candles of light, and in whose walls yawn dark galleries, leading we know not whither, and about and within whose black portals cubic pyrites and brilliant quartz crystals flash back the light of our candles in a thousand merry, glow-worm twinkles. After passing through the subterranean villages of divers mining companies, we come to the thriving settlement of the Savage people. Having halted in their hospitable hamlet long enough to hear the latest underground news, and to make some inquiries relative to our road to the next village, the home of the Gould & Curry tribe, we take our leave and pursue our journey. Of course we see many wonders, meet with numerous adventures, and encounter more than one solitary traveler—but not a "solitary horseman"—walk on the brink of more than one yawning chasm, and experience numerous and mixed sensations, but finally reach the Gould & Curry clan in safety. We find them quite a civilized people. Although more than four hundred feet below the streets of the city, we here find a large building with a huge steam-engine in it, puffing away as comfortably as though there was no surface to the earth, with green trees, singing birds and the bright sun shining upon all and everywhere. We enter the building, take a seat, sip a glass of champagne, light a cigar, and as we watch its curling smoke mingling with the white wreaths of steam from the hissing engine, wonder whether we are really within the earth or upon it. Lamps are burning upon the walls, persons are passing through the room in which we are seated are going down stairs, coming up stairs, bustling in every direction—a new face each minute. We appear to have stumbled upon the gnomes. We find in passing through the village that the people here have railroads running in every direction, and—as in the world above—have to clear the track for the rushing trains that, with fiery eyes, dart wrathfully out from dark and lonesome roads. With a "whiz" the cars fly past us and speed away down along what seems one of the dreary lanes to Satan's sooty kingdom—a bye-way leading straight into the centre of his smoky capital. About us we occasionally hear the splashing of water, mingled with creaking sounds and pass through places where air strikes damp and cold upon our cheeks to enter where it is hot and stifling. Suddenly peals of thunder burst over our heads, and every gallery and cavern echoes its roar. Our nerves are soon quieted for we know that the noise was but the discharge of a ton or two of ore through some of the chutes above. There are inhabitants far above us toward the surface of the earth—the place is like a huge ant hill. Again upon a sudden our ears are rent by an explosion—above, below—somewhere, which causes us for moment to suppose that the earth has burst in its center and is no longer a thing of substantiality. We know that it was but a blast which thus caused the whole place to shudder, and smile at our late nervousness. There are many roads leading from the Gould & Curry, and we might travel half a mile in several directions, but we will continue our journey northward and rise to the surface at the works of the Best & Belcher, through a shaft some four hundred feet in depth. Here we land nearly one mile north of where we descend. Our underground highways are being extended daily in every direction, and will soon be connected with those of Gold Hill mines, and these again with those of American Flat. In a very few years more there will be miles on miles of these subterranean streets, meandering under and running from one to another of our cities.

Laces and the Love of them.

A lady who does not care for laces is a phenomenon. They have been in vogue with the sex for at least four hundred years, and amid all the mutations of fashion, have never lost their prestige as a speciality of the aristocratic toilet. Puritanism, Quakerism, Methodism have decried and denounced them in vain, and sumptuary laws aiming at their restriction to a privileged few have proved a dead letter. Strange to say, the world is indebted for some of the costliest of its fabrics to a class vowed to perpetual abstinence from the vanities of the flesh. The nuns of the middle ages introduced guipure, and in fact almost up to the time of the Reformation the nunneries were the principal lace and embroidery factories. The fair devotees for a long period limited their labors to the production of cobweb robes for the images of the Saints, but eventually they exercised their vestal fingers in the fashioning of veils, etc., for the adornment of queens and noblewomen. Sometimes, so slow was the process of manufacture, it took two or three generations to complete a robe for the Virgin Mary. When the delicate film-work dropped from the hands of the superannuated Sister who had spent a life time in its elaboration, it was caught as reverently as if it had been a prophet's mantle by some younger member of the order, who in turn growing old and blind, transmitted it to another; so that the grand cathedrals and stately towers of medieval Europe were constructed in less time than its thread lace veils and mantles. The lace ruffs of Queen Elizabeth's reign were an abomination in the eyes of the pious fathers of the Reformation; but "Good Queen Bess" thought they became her stiff figure and vixen face, and she piled them, one above another up to her royal ears, in utter contempt of the ecclesiastics. An author of that day, referring to the Elizabethian style of wearing ruffs, says they were placed gradatim, one beneath the other, and underneath all the master-devil ruff, wrought all over with needlework."

Lace making is not now the tedious work that it was a few centuries ago; but even yet the finest laces are all manufactured by hand, and rare specimens are worth almost fabulous prices. The Empress Eugenie has a shawl of point d'Alencon, for example, valued at $3,000, a piece of toilet drapery of the same material worth $5,000, and a complete dress of dentille royale for which the figure was $7,500. From one to two thousand dollars have frequently been given for a lace bridal robe in this land of republican simplicity, and we presume that since Shoddy became lord of the Asceudant, still more expensive fabrics have been imported to meet the exigencies of the feminine members of his illustrious clan.

CAST STEEL IN BOILERS.—The employment of cast steel is every day extending, and often with advantage. In 1859 Herr Kohn, a German engineer, placed in a boiler 40 feet in length, made of plates 11 millimetres thick, a sheet of steel only 5½ millimetres thick. This sheet, which was placed near the furnace, was found, after two years and a half of very sustained work, in a perfect state of preservation, while the neighboring sheets of iron plates had suffered greatly. The steel plate bore, besides, no incrustation, a result which was attributed to the more rapid action of the water on coming in contact with it. Experiments made in this direction have not, however, always proved successful. Thus the Austrian railway company had six locomotives made with boilers of cast steel. The working of these engines were not satisfactory, the fire-boxes displaying alarming rents after a short time. The Austrian railway company is, however, determined to persevere with further experiments.

ANOTHER NEW ENGLISH STEAM ENGINE.—A new steam engine has been invented by Messrs. Martin & Hodgson, of Manchester, England, which has two pistons in each cylinder on a vibrating shaft, just as a door swings on its hinges. Motion is communicated from the cylinder shaft to the screw shaft by means of levers and connecting rods. This engine, or its principle, was designed by Captain Ericsson many years ago. The Princeton frigate had two, and drawings of them can be found in "Stuart's Naval and Mail Steamers of the United States."

KILLED BY THE CARS.—A little boy named Richard H. King was accidentally run over and killed by the cars on Howard street in this city, on Monday last.

Changes Occurring During Germination of Plants.

When a seed is placed in the soil under favorable circumstances, it becomes the seat of an important series of chemical changes, which result in the production of the young plant. Experiment and observation have shown that heat, moisture and air, are necessary to the production of these changes, and though probably not absolutely essential, the absence of light is favorable in the early stages. The temperature required for germination varies greatly in different seeds, some germinating readily at a few degrees above the freezing point, and others requiring a tolerably high temperature. The rapidity with which it takes place appears to increase with the temperature; but this is true only within very narrow limits, for beyond a certain point heat is injurious, and when it exceeds 120° or 130° Fahrenheit, entirely prevents the process. The presence of oxygen is also essential, for it has been shown that if seeds are placed in a soil exposed to an atmosphere deprived of that element, or if they be buried so deep that the air does not reach them, they may lie without change for an unlimited period; but so soon as they are exposed to the air, germination immediately commences. Illustrations of this fact are frequently observed where earth from a considerable depth has been thrown up to the surface, when it often becomes covered with plants not usually seen in the neighborhood, which have sprung from buried seeds. When all the necessary conditions for germination are fulfilled, the seed absorbs moisture, swells up, and sends out a shoot which rises to the surface, and a radicle which descends—the one destined to develope the leaves, the other the roots, by which the plant is afterwards to derive its nutriment from the air and the soil. But until these organs are properly developed the plant is dependent on the matters contained in the seed itself. These substances are mostly insoluble, but are brought into solution by the atmospheric oxygen acting upon the gluten, and converting it into a soluble substance called diastase, which in its turn reacts upon the starch, converting it first into dextrine, and then into cellulose, and the latter is finally deposited in the form of organized cells, and produces the first little shoot of the plant. At the first moment of germination, the oxygen absorbed appears simply to oxydize the constituents of the seed, but this condition exists only for a very limited period, and is soon followed by the evolution of carbonic acid, water being at the same time formed from the organic constituents of the seed, which gradually diminishes in weight. The amount of this diminution is different with different plants, but always considerable. Boussingault found that the loss of dry substance in the pea amounted in 26 days to 52 per cent., and in wheat to 57 per cent. in 51 days. Against this, of course, is to put the weight of the young plant produced; but this is never sufficient to counterbalance the diminished weight of the seed, for Sussure found that a horse bean and the plant produced from it weighed, after 16 days, less by 29 per cent. than the seed before germination. The same phenomenon is observed in the process of malting, which is in fact the artificial germination of barley, the malt produced always weighing considerably less than the grain from which it was obtained. It was believed by Saussure, and the old investigators, that the carbonic acid evolved was entirely produced from starch and sugar; and as these substances may be viewed as compounds of carbon and water, the change was very simply explained by supposing that the carbon was oxydized and converted into carbonic acid and its water eliminated. But this hypothesis is incapable of explaining all the phenomena observed; for woody fibre, which is one of the chief constituents of the young plant, contains more carbon than the starch and sugar from which it must have been produced, and we are, therefore, forced to admit that the action must be more complicated. There is every reason to believe that the nitrogenous constituents of the seed are most abundantly oxydized, for they are remarkably prone to change; but the action of the air is not confined to them, and it appears most probable that all the substances take part in the decomposition, and the process of germination may in some respects, be compared to decay or putrefaction, which, like it, is attended by the absorbtion of oxygen and evolution of carbonic acid; but while in the latter case the residual substances remain in a useless state, in the former they at once become part of a new organism.

Changes occurring during the after-growth of the Plant.—When the plant has developed its roots and leaves, and exhausted the store of materials laid up for it in the seed, it begins to derive its substance from the surrounding air, and to absorb carbonic acid, water, ammonia, and nitric acid, and to decompose and convert them into the different constituents of its tissues. These changes take place slowly at first, and more rapidly as the organs fitted for the elaboration of its food are developed. The roots and the leaves are equally active in performing this duty, the former absorbing the mineral matters along with the carbonic acid, ammonia, nitric acid, and moisture in the soil, or the manure added to it, the latter gathering the gaseous substances existing in the air. —*Rural American.*

Poisoning of Water by Lead Pipes.

Professor A. Dussance, of New York, has recently made a series of experiments on the action of several different kinds of water on lead, under the various conditions. The lead subjected to the action for twenty days, and the experimenter draws the following :—

1. That distilled water has no action whatever on lead by three days of contact; after that time this dissolving action begins. 2. That the lead is dissolved by distilled water in proportion increasing every day; the distilled water exposed to the open air dissolves more of this metal than distilled water in close vessels, or than distilled water deprived of air and gas. 3. That creek water, containing small proportions of lime, has no action on lead. 4. That distilled water containing 1-3500th of a salt in solution, prevents the dissolving action of the water on lead. 5. That water dissolves lead till the saturating power of the acid is exhausted. 6. That, in ferruginous water, all of the iron is precipitated by lead; then lead pipe must not be used to convey mineral waters. This fact has never been noticed before. To render these facts more interesting, another series of experiments must be made to ascertain the quantities of lead dissolved daily in the water, and what compound it forms, and to see if the action will be the same in the lead pipes.

Among all the dangers arising from carelessness, the public may not be aware, that there is great danger in the careless use of even hydrant water. That water, impregnated with any preparation of lead, cannot be safely used for culinary purposes, even in cases where the lead is present in too small a proportion to produce any immediate injury, is well known. Lead, says Professor Aiken, of New York, like some other poisonous agents, when taken in minute successive doses, will remain in the system, apparently inactive, until a certain amount accumulates; then, suddenly, a series of alarming symptoms will supervene, often resulting in death. An occurrence of this kind was recently brought to my notice by one of my professional friends, who was called upon to prescribe for several members of the same family, all apparently suffering from the peculiar action of lead. In one of the cases the result was fatal—the others, after much suffering, slowly recovered. A portion of the water supposed to have been instrumental in producing the difficulty, was brought to me for examination, and carefully analyzed, and found to contain lead in the proportion of 0.028 gr. to the gallon of water. This very minute quantity, very little exceeding the 0.001 gr. to an ordinary tumbler full of water, taken at intervals, somewhat regularly, seems to have accumulated until the poisonous action of the metal was developed. The whole difficulty seems to have arisen from the occasional use of water taken from a hydrant stop that was not in regular and frequent use; the water in a portion of the lead pipe being thus allowed long continued contact with the metal in the immediate vicinity of the stop. The simple precaution hereby indicated, and one that cannot be neglected with safety, is to allow the first discharge of water from any hydrant stop to run to waste, and not to collect any for culinary purposes until we are sure that all the previously stagnant water in the lead pipe has wholly escaped. And it would be better, in general, to resort to the yard hydrant for water required for drinking or preparing food—the lesser length of lead pipe there in use diminishing the danger. But even there the water first discharged in the morning should be thrown away—*London Mechanics' Magazine.*

THE RESULT SUMMED UP.—The election returns show that even had the whole Southern Confederacy cast its vote for McClellan, his election would not have been secured. The vote of the electoral college chosen is 234. Of this number, 118 elects. Lincoln and Johnson have received 213 of the whole number, and McClellan 21. The Union majority for Lincoln is therefore 192.

GREASED STEAM.—An advertiser in a foreign mechanical journal makes use of the following language in puffing a new oil cup: "The above lubricators grease every particle of steam previous to its passing through the valves into the cylinders." We have heard of greased lightning, but greased steam is a decided novelty.

A CALIFORNIA STOCK BOARD IN NEW YORK.—We understand that active measures have been taken in New York to start a California stock board in that city. The first session of the board was held on the 29th of November.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

SAN FRANCISCO, SATURDAY MORNING, DEC. 3d, 1864.

An almost unceasing fall of rain the past week has somewhat interfered with business in financial and stock circles, and transactions have been unusually light. The storms throughout the interior have interrupted communication, preventing the regular receipt of advices, and delaying shipments of treasure to this city. Telegraphic communication has also been suspended with Nevada, and we are without our usual information from a number of mines.

Receipts of treasure from the country since Saturday last have amounted to less than $600,000. The supply of bullion was, however, ample yesterday for shipping purposes, and gold bars were ruling at about 840@850. Silver commanded about 1 ℔ cent. premium for bars of a fair degree of fineness. Ordinary parcels ranged at ½ ℔ cent. premium to 2 ℔ cent. discount.

The money market presents no new feature, and rates are ruling at 1½@2 ℔ cent. per month in bank. Capital is abundant, and is likely to continue so during the winter. Our exports of treasure since January 1st have amounted to some $53,000,000, and are $10,000,000 in excess of a corresponding period last year.

Leading stocks have been moderately dealt in, but are well maintained. Little or no speculation is apparent; but we do not observe, on the other hand, much disposition to sell at present quotations. Most holders seem to have faith in the future yield of prominent claims, and evince no anxiety to part with their stock. Speculative shares have been subjected to the usual fluctuations, but were rather less active.

City stocks, with scarce an exception, seem to be in better request. California Steam Navigation Co. is enquired for at 75 ℔ cent. ($750 per share). Spring Valley Water Co. is held at 70 ℔ cent. on amount paid in (equal to $275 per share), and State Telegraph is offered at $40 per share. State, city and county bonds are, for the most part, held with firmness, at advanced rates.

Legal Tender Notes have been sold to the extent of $57,500, within a range of 46c, s. 30, to 49c, and close at 48c bid, 49c asked. The latest telegraphic advices from the East quote gold in New York at about 222 on the 28th inst.

Savage continues inactive and 10 feet were sold at from $1,800 to $1,830, buyer 30. A dividend of $75 per foot, it is expected, will be declared to-day, for the month of November, leaving a surplus in the treasury of the company.

Gould & Curry opened at $1,560, rose to $1,610, buyer 10, receded to $1,585, and closed at $1,600, 31 feet changing hands within this range. The company's receipts of bullion the past month averaged $8,000 per day, making an aggregate of some $240,000. A large quantity of fair ore has been accumulated at the mill, and the daily yield of the mine during the month of November exceeded, it is said, 150 tons, in addition to which about 250 tons, worth $150 to $200 per ton, were sent to Dall's Mill. The treatment of ores at the company's mill is now very satisfactory and is less expensive than formerly. At this writing, nothing definite has been determined upon, as to the dividend for the past month.

Challar has been dull and small sales were made, advancing to $1,060, buyer 30, receding to $1,025, and held yesterday at about $1,050. The hoisting apparatus of the company is in successful operation and from 150 to 170 tons of ore is daily being brought to the surface. Additional mills have been employed and the net revenue is now applied to the dividend account. A dividend of $50 per foot is confidently anticipated for the month of November.

Yellow Jacket is in rather less favor and 36 feet were sold, opening at $935, receding to $850, seller 60, rallying to $900, seller 30, selling yesterday morning at $850 cash and $850 seller 60. We have no direct intelligence from this claim this week, but learn that it is looking very well. A number of mills are at work crushing ore for the company and considerable shipments of bullion were made last month.

Potosi is much weaker; sales were made at the close at $710@$725, buyer 10 days.

Belcher is held at about $800. This company are now extracting ore and anticipates no further difficulty with water in the lower drifts.

Empire Mill & Mining Co. was sold at $525 per share, and was offered yesterday at $550. The receipts of bullion for November have been up to the usual average of the past few months, and a dividend of $25 per share will probably be declared to-day.

Ophir fell from $315 to $400, rose to $435, and closed at about $420 bid, $430 asked. 18 feet were sold. Some 100 feet of water remains in the central shaft. The new mill on the Carson is at work upon third-class ore, reducing about 30 tons per day.

Hale & Norcross has declined from $445 to $400, at which latter rate it was offered yesterday. 19 feet changed hands.

Uncle Sam has been actively dealt in, at declining rates. 36 feet were sold, receding from $200 to $140, rallying to $150, and closing yesterday at $150. The affairs of the company are shrouded in such mystery that little or no information can be obtained from official sources. We are told that efforts are being made to depress the stock, for some ulterior purpose; but do not vouch for the correctness of this statement.

Imperial has met with a material decline, and 463 shares were sold, dropping from $140 to $123, rallying again to $140, then receding to $122, and closing at about $126 bid.

Bullion has been dealt in to the extent of 142 feet, within the range of $170@155, and selling yesterday at $160@162.

Nevada (J. G.) was active at fluctuating rates, but is now firmer. 329 shares changed hands, advancing from $59 to $65 (assessment of $10 delinquent), falling to $54, seller 30, advancing to $70, and closing at about $75, buyer 30.

Burning Moscow has been rather more steady, and 1,785 shares were sold, at rates ranging from $49, seller 30, to $65, and closing yesterday at $55½.

Sheba fluctuated but little, and 287 feet were sold, dropping from $18 to $15, and rallying to about $19. The assessment of $30 per foot, levied on the 25th ult., will be required to cancel the liabilities of the company to the 1st inst., which now amount to some $50,000.

Wide West rose to $22, fell to $15, and rallied to $17; Bajazet and Golden Era rose to $35, buyer 30; Daney was sold at $22; Buckeye at $6, and Baltic at $28. Burnside rose from $4 to $7½, and Overman was sold at $70 and $75.

The total sales of stocks and Legal Tender Notes since Saturday last amount to $398,461.75.

FRANK LAWTON, Secretary.

Commissions on Mining Shares.

Sale at 1 dollar up to 10 dollars	$0 25 per foot
Sale at 10 dollars up to 25 dollars	50 per foot
Sale at 25 dollars up to 50 dollars	1 00 per foot
Sale at 50 dollars up to 100 dollars	1 50 per foot
Sale at 100 dollars up to 200 dollars	2 50 per foot
Sale at 200 dollars up to 400 dollars	5 00 per foot
Sale at 400 dollars up to 600 dollars	6 00 per foot
Sale at 600 dollars up to 800 dollars	7 50 per foot

From $800 to $3,000 per foot, one per cent, on the amount of purchase or sale.

Anything above $3,000 per foot, three-quarters of one per cent. on the amount of purchase or sale.

J. B. E. CAVALLIER, President.

Mining Summary.

HUMBOLDT.

Mining operations in Humboldt appear to be decidedly improving at the present time. We gather the following from the Humboldt *Register*:—

Another heavy deposit of very rich black sulphurets has recently been struck in the lower shaft of the Sheba. This deposit seems to be unlike all the previous finds within the walls of the mine; it seems not an insolated mass, but a continuous lode, standing eight feet wide, solid, and surpassingly rich, exceeding anything before found. There was great rejoicing among the Sheba people, and the contagion was communicated to a large circle of sympathising friends.

For the past two weeks, the Sheba mill has been at work on De Soto mineral, with the same success as with the Sheba ore. Their first class ore is still being shipped to England. The Sheha and Evening Star mills ship by each stage, but do not post the public as to the amounts. The Sheba ships bars; the Star, crude bullion—having but small facilities for smelting.

Mr. Clayton, mineralogist and geologist, is making a survey of this district. Mr. DeGroot, editor of the 'Nye County News,' is also there compiling matter for the publication of a history of the Territory. Several of the old settlers are giving in their early experience, which will, no doubt, he very interesting.

Col. O'Connor is there, looking after his interest in the Whitmore company, on the Sheba ledge. Arrangements have been made to go to work immediately and open it.

The large tunnel hy which the De Soto mine will be worked is now in two hundred feet. They expect to strike the ledge in about forty feet more. Extensive improvements have been made on the grounds belonging to the mine.

'Mount Vista' is a location on the Detroit ledge. Mr. Root is delving away into the original, in expectation of soon striking the ledge with his tunnel. The ledge, where prospected by shaft, contains fine ore. The 'Mount Vista' claim is owned in New York, and funds have been received with which to commence work at once.

The Ætna, the original location on this ledge is owned by eastern men, and arrangements have been made to put up machinery in the spring. Work continues in the ledge, which is well advanced in development. The Rochester Co. claims on the same ledge, and in prospecting in this claim some good ore has been found. The company expects to perfect arrangements under which effective work will he commenced at an early day.

'The Jewess,' in American District, is one of the largest silver-bearing quartz ledges we have seen. It is located in a high mountain ridge, crops high out of the solid mountain of porphyry, and can bo traced distinctly by the croppings at least half a mile. The croppings show well in silver, with a small amount of gold.—*Humboldt Register*.

Trinity District.—A correspondent of the *Register*, writes that he is much surprised, as well as pleased to notice the advancement which has taken place there during the past five weeks. He had made a careful examination of the different ledges in the district, and devoted particular attention to the 'Evening Star' claim on which there has been done more work than on all the other claims of the district; and there is good reason to suppose that it is a fair sample of the claims in that vicinity. He therefore refers to it as a representative mine as follows:—

I find that within this claim there is at least one regular fissure vein, and probably several. On this ledge the company has made excavations of considerable extent, and it has been found to be well defined and, regular in its course and dip. It is separated from the walls of the fissure by the clay seam so highly prized by the practical as well as by the scientific miner; and this, in connection with the striated, polished surfaces of the ledge and wall rock leaves no reasonable room to doubt that the ledge is one of great extent; while the two hundred or three hundred tons of rich rock taken out during the last month or two by a very small number of miners, and the large quantities of very rich ore now in sight in various parts of the works, constitute satisfactory evidence of its enduring richness.

The mill recently erected there has been designed and constructed by men who, in addition to their own acknowledged ability as practical and scientific mechanics, are thoroughly familiar with the experience and deductions of all those who have made quartz mills and quartz working the subject of their special attention. [It is an exact mate for the Sheba mill; cast from the same patterns, and put up by the same men.] It has now but five stamps, but the power of the engine and the framework of the battery are adapted to the putting in of five more stamps, which will probably soon be added.

The ores of this district are very easily worked by a simple pan process, without roasting. Water has recently been secured in abundance, by sinking a well or reservoir and running short drifts in the upper part of the bed-rock, so as to collect the subterranean currents in the ravine. It is perhaps proper for me to say, that I have, neither in this claim and mill, nor in any other enterprise in this district, any personal interest whatever; and that I make these statements in answer to those who have referred to this district in unfavorable terms. We have among us in this country men who can see nothing of a favorable character in any mining enterprise with which they are not connected—as managers or otherwise; and it is to men of this class that we have been indebted for the profoundly stupid 'opinions' in regard to the unreliable character and the alleged bad management of the mines of Trinity District.

REESE RIVER.

Over $4,000,000 have now already been invested in the Reese River mines by New York capitalists alone—none of whose purchases are located at a greater distance from Austin than sixty miles. Such men as Auguste Belmont, George Law, Cornelius Vanderhilt, and others are investing largely.

Mr. Greenhood, forwarding merchant, of Front street, in San Francisco, is about to ship to Reese River a new quartz crusher, manufactured in New York. It is constructed on the European plan and consists of a series of iron rollers, which compress and crush the rock without the use of stamps. This plan has not yet been tried, we believe, in Nevada.

We condense the following items from the *Reveille*:—

Another Quartz Mill.—The engine and boiler for the new quartz mill of Ware, Bowen & Emmersley, has arrived at the mill site, in Cedar ravine. The engine is ten horse power. There will he five stamps, each weighing five hundred pounds. The amalgamating tubs are a new patent, hut very simple, being made of wood with an iron bottom. The rest of the machinery is on the way, and will arrive by the time it is needed. Should no unforseen accident occur it is expected the mill will be in running order by the middle of January. They intend to have roasting furnaces erected in the spring.

Castings for Roasters.—A wagon, having on cast iron frames, doors and grates for the roasters of the quartz mill at San Francisco Cañon, has arrived. The proprietors of this mill are now having it entirely repaired and renovated. They will have two roasting furnaces erected immediately, with a drying furnace attached, and will have everything in running order by the first of January.

The Boulder ledge is a new location just made, on the north side of Main street. It was discovered in digging a foundation of a cellar. Some very rich ore has been taken from an opening but eight feet deep.

The Boy's Ledge is the name of a claim recently located directly west of the Oregon mill, by Amos Gridley, Andrew Gaston and David Perkins, none of them over twelve years of age. They have already sunk an incline to the depth of twelve feet and find a well defined ledge of chloride rock, six inches in width, from which they are taking out some very good paying ore.

Louis Ellis has just started a new two-stamp quartz mill, with an amalgamating pan attached, in Silver ravine, adjoining his mine and residence.

vine, is progressing fiuely. It is the intention of the proprietors to prosecute the work to completion with as little delay as possihle.

The Savannah ledge, is proving itself a good paying mine. It is owned by three persons, there being six hundred feet in the location. The incline is down forty feet, and the claim has paid all the expenses, and good wages to the owners, since work was commenced on it, some of the top rock paying $570 to the ton. The proprietors of this ledge are now running drifts out in different directions, from which they are taking out very fair loooking ore. They will continne work all winter.

McPherson & Co.. are bnilding the most substantial pan mill yet put up. The battery was procnred from San Francisco, and consists of three stamps of 150 ponnds each. Wooden amalgamating tuhs will be nsed and the entire works substautially enclosed and covered so that operations may be carried on in any weather.

MISCELLANEOUS.

The Como Sentinel says the prospects of Palmyra District have never been so bright as now, since the first discovery of the mines. The favorahle opinion of Professor Silliman and the working of Whitman rock at the Sacramento Mill, has had a tendency to attract the attention of experienced mill men to the mines around Como. We are informed that arrangements are under way for the running of the Como mill by a party of practical operators, for a lengthy period of time. It is to be hoped that they will succeed, and thereby establish beyond doubt the permanency and richness of those mines.

El Dorado Canon.—An increased degree of activity is being manifested in El Dorado Cañon, on the Colorado river. The increased facilities of communication in consequence of the opening of steam navigation of the Colorado, is already beginning to be sensibly felt. The Techatticup, the most noted mine in this locality, has taken ont a large body of ore, resemhling that of the Gould & Curry. None of the ore, save for tests, has been shipped, and not much has been worked. There are no furnaces or arastras now at the cañon, and but one mill, the Pioneer, which commenced working six months ago, bnt has lain idle most of the time, hecanse the miners are dissatisfied with the amalgamating department. It is said that pans are to be sent down soon to remedy the evil. The machinery of the Armagoza mill is to be moved to the cañon for working the Techatticup ore. The Queen City Company have some ore out, and the New Mexico and Independence Companies have been sending ores to the Pioneer mill.

The mines in this cañon were discovered in the summer of 1861, since which time there has been a permanent settlement. The provisions heretofore consumed have been brought in by Mormons, who charge eight cents per pound for flour, or by teamsters from Los Angeles, who charge twelve and a half cents per ponnd freight. Some contracts have lately been made here to send goods from this city, by schooner to the river, and by steamer to the cañon, for four and a half cents per pound, for the entire distance from San Francisco. The steamer has ascended, as yet, only twice to the Cañon.

Cast steel Twyers.—Mr. T. E. Vickers, of Sheffield, England, has patented an improvement in the manufacture of cast-steel twyers. These twyers have hitherto been cast singly, each in a mould by itself, thns involving considerable labor in the preparation of the moulds. As an economic substitute for this filan, it is now proposed to cast what may be termed a cylinder, presenting the profile of two or more twyers (by preference six and upwards) piled one upon the other. This cylindrical casting is to be divided up into twyers in a turning lathe or by saws, as may be found most convenient, and the twyers may then be finished in the usual way.

Washoe Bullion.—The Virginia *Union* says that for the week ending with Saturday last, Wells, Fargo & Co. shipped nearly three tons and a half of bullion from Virginia city, worth, according to assay, $220,578 98. This is the heaviest aggregate for some time.

More Silver.—The Pacific *Tribune* states that silver mines have been discovered in Washington Territory.

Home After the Children Have Grown Up.

Nothing on earth grows as fast as children. It was yesterday, and that lad was playing with tops, a buoyant boy. He is a man and gone now. His foot is in the field and his hand is upon the sword. There is no more childhood for him or for us. Life has claimed him. When a beginning is made, it is like a raveling stocking, stitch by stitch gives way till all are gone. The house not a child in it. There is no more noise in the hall—boys rushing in pell-mell. It is very orderly now. There are no more skates or sleds, boats, balls or strings, left scattered about. Things are neat now.

There is no delay of breakfast for sleepy folks; there is no longer the task before you lie down of looking after anybody, and tucking up the bed-clothes. There are no disputes to settle, nobody to get off to school, no complaints, no importunities for impossible things, no rips to mend, no fingers to tie up, no faces to he washed, or collars to be arranged. There was never such peace in the house. It would sound like music to have some feet clatter down the stairs. Oh for some children's noise!

What used to ail us when we were hushing their loud laugh, checking their noisy frolics, and reproving their slamming and banging the doors? We wish our neighbors would lend us an urchin or two to make a little noise in these premises. A house without children! It is like a lantern and no candle; a garden and no flowers; a vine and no grapes; a brook and no water gurgling and rushing in its channels. We want to be tried, to he vexed, to be run over, to hear child life at work with all its varieties.

During secular days this is enough marked. But it is Sunday that puts an American home to proof. That is the Christian family day. The intervals of public worship are long spaces of peace. The family seems made up on that day. The children are at home. You can lay your hands on their heads. They seem to recognize their greater and the less love—to God and their friends. The house is peaceful but not still. There is a melodious trill of children in it. But Sunday comes too still now. There is a silence that aches in the ear. There is too much room at the table; too much at the hearth; the bedrooms are a world too orderly. There is too much leisure and too little care.

Alas! what mean these things? Is somebody growing? Are these signs and tokens? Is life waning?

Between the Blankets.—Some people take their cares and troubles to bed with them. It is a bad plan, for they are diabolical bedfellows. Even if "tired Natnre's sweet restorer" whips the spirit off to dream-land in the midst of its repinings and forebodings, there is no comfort for it there. Of the last sad waking thoughts are horn visible imps that haunt us in the realm of Morphens, and we fight with horror all night long. Happy are those who can put off their day troubles with their day clothing, and, as they assume the horizontal, forget all the annoyances that belong to perpendicular life. We have known people who could do all this; individuals who, after struggling from morning till night in Sloughs of Despond, and getting miserably mauled by the Giant Despair, no sooner slipped between the sheets than the Angel of Sleep, who seemed to have been lying in wait there to bless them, took them on her wings and bore them to Elysium. To fight over again in bed the battles of life, as many do in their slumbers, is a miserable business. Still more unpleasant is it to be surrendered in sleep to all sorts of vague and impossible phantoms which are no less disagreeable than they are utterly absurd. Worst of all is it to lie through the weary watches of the night, self-tormented. The best thing nervous, highly impressible, fidgety people can do after getting into bed is to lie resolutely still and try to abstract their minds from the occurrences of the day. The power of doing this is natural to many, bnt it may also be acquired by persevering effort. The will of the weakest is a mighty instrument when fairly hrought into play.—*Wide World.*

Dead Sea Salt.—Some new observations on the Dead Sea water appear to present some points of intcrest. Roux, in an analysis of water collected in April, 1862, fonnd it to be slightly alkaline in re-action, and to contain a little sal ammoniac. The presence of ammoniac was also precisely observed by Boussingault. Roux fonnd 20.6 per cent. of non-volatile saline residue, which contained 0.364 per cent. of bromide of magnesium. Calculation shows that this salt, therefore, contains seven pounds per ton of bromide, this water being richer in bromide than any other known mineral water. The Dead Sea salt may hereafter become an article of commerce, as a material for the extraction of hromide. Every one remembers the discovery of silver in sea water by Malaguti and others. Aupin, a pupil of Malaguti, has examined this Dead Sea salt, and found in two kilogrammes of the salt one milgramme of the metal, equal to seven grains of silver in the ton.

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the Mining and Scientific Press, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

San Francisco:
Saturday Morning, Dec. 3, 1864.

A NOTABLE DEATH.

It is seldom that the scientific world is called upon to mourn the loss of one more extensively or more favorably known in the walks of science than was he whose sudden death was announced in this city, by telegraph, on Tuesday last. Prof. B. Silliman, Sr., of Yale College, New Haven, Conn., for full half a century has been eminently distinguished for his devotion to learning—so much so that for a long time he has justly been regarded as the Nestor of American science. Though ripe in years, his death was most unexpected and very sudden, resulting from apoplexy. He died on the 24th instant, in the eighty-sixth year of his age. For fifty-seven years he held the professorship of chemistry in Yale College. His entire life has been devoted to the interests of that venerable institution, and to the advancement of the cause of science in general, and he has done much to enlarge the bounds of physical science. He was the founder of the *American Journal of Science and Arts*, which has long been extensively known throughout the world, though more generally as *Silliman's Journal*, out of compliment to its chief and most active editor. This publication was founded in 1818, and has ever been looked upon, in Europe, as the only truly scientific journal in the United States. For some time past it has been under the management of his son, Prof. Benjamin Silliman, Jr., and his son-in-law, Prof. J. D. Dana. In addition to his voluminous contributions to the *Journal*, he has published several valuable scientific works. He resigned his professorship in 1853, since which time he has ceased from active literary efforts, but retained to the last an ardent love for the great work to which he had devoted a long and well spent life. The Professor was ever a man of remarkable vigor of body as well as intellect, and had rarely known an ill day up to the time of his sudden death.

Do you Like our Paper?—If so, have you made the least effort to increase its circulation? If not, you should assist us at once. Aid us to increase our circulation and the fruits of your efforts will redound to you in the manner of an improved journal. We are laboring hard for your interests. Those who assist us now in establishing one of the most useful papers upon this coast, will have occasion to feel proud of their efforts hereafter. Our journal is already a positive success. Its influence is rapidly extending. Speak a good word for it whenever you can. If your neighbors are not taking it, get them to make up a club and send their names.

The telegraph announces the death of ex-Governor Fairbanks, of Vermont. He was celebrated throughout the world as the inventor of the Fairbanks' Platform Scales, an invention conferring untold benefits upon the commercial world. Few men, even among the great ones of earth, have achieved anything so widespread in its benefits, as this unassuming 'Green Mountain Boy.'

EASTERN FINANCES.

Per steamer Sacramento we are in receipt of Eastern mail advices to November 3d. The second instalment of $20,000,000 on account of the last $40,000,000 six per cent. loan, was paid November 1st, and produced no stringency in the money market, the general influx of currency from the army and the interior being about equal to the payment required. The market for money at New York was easy at 7 ℘ cent. per annum, and some transactions had been made at 6 ℘ cent. on call. First-class commercial paper had been ranging at from 9 to 12 ℘ cent. The postal-order money system, which has been so long in successful operation in England, had been introduced in New York, and drafts would in future be drawn in that city upon any of the order offices throughout the country, in sums of not less than $1 nor more than $30. The benefit of this system should be extended to this coast. Such an arrangement in this city would be a source of great convenience to many parties desirous of making small remittances to their friends in the East.

The statement of the National debt for the month ending with the 31st of October, shows an increase of some $61,000,000, or about $2,000,000 per day, upon that of the preceding month, making an aggregate of $2,017,000,000 against $1,995,973,000 on the 30th of September. The leading figures compare as follows:—

	Sept. 30.	Oct. 31st.
Coin debt	$923,688,931	$961,170,79.
Paper debt	564,685,874	684,039,315
Currency	467,301,899	471,889,408
	$1,955,973,716	$2,017,099,515
Unpaid requisitions	34,641,364	37,515,980
Am't in Treasury	24,359,405	19,868,652

The currency of the Government, including all description of circulation and interest-bearing treasury notes, amounted to $676,886,941, and shows a decrease of some $10,000,000 over the preceding month. The issue of bonds under the last $40,000,000 loan had reached $37,000,000, and the subscriptions to the new 7-30 currency loan amounted to $21,000,000 during the month of October.

The Grass Valley Foundry.—During our late trip to Grass Valley we took occasion to visit the iron foundry, on Mill street, in that town. This establishment is now second to none in this State outside of San Francisco. We have, unfortunately, lost the notes which we took on the occasion of our visit, and regret that we cannot, on that account, make so full a notice of the establishment as we had intended to. If we recollect aright, the capacity of the cupola reaches some four or five thousand pounds at a casting. This foundry has turned out several steam engines during the past season, and is capable of doing almost any character of machine work. The building has been several times enlarged to accommodate the growing increase of the business. A change has recently been made in the proprietorship, Mr. J. Lakeman having sold out his interest to his late partner, M. C. Taylor. Mr. Taylor is a thorough business man, and the Mill Street Foundry will lose none of its former popularity under Mr. T.'s sole management of the concern. Such of our friends in Grass Valley as wish to procure machinery for quartz mills, or, in fact, castings of any kind, are recommended to the Mill Street Foundry, which is now doing an extensive and a satisfactory business.

Arizona Mining Affairs.—Col. Davidson, Superintendent of the Arizona Mining Company, left this city, a few days since, for the scene of his labors, accompanied by a corps of twenty-five assistants. The Colonel took with him about seventy-five tons of machinery and freight for the company's mines. The stock of this company has been increased in New York to ten millions of dollars.

The rains have already had considerable effect in reducing the market prices of breadstuffs, grain and hay, and present appearances promise a still farther decline. The rain has been general all over the Pacific slope and has been most unprecedentedly copious for the first one in the season.

Will Return Immediately.—In consequence of the melancholly intelligence of the sudden death of his father, Prof. Silliman, the younger, who has devoted the past summer to an examination of the mines and mineral resources of the Pacific coast, will leave on the steamer of the thirteenth instant for the East. We learn that the Professor has been most favorably impressed, during his sojourn here, with the richness, extent and permanency of our mines, and on his return he will undoubtedly do much, by oral testimony and published evidence, in establishing a character for the mines of the Pacific coast, among Eastern capitalists, to whom it is now evident we must chiefly look for the pecuniary means for developing our mineral wealth. We regret that he is called upon to leave us under such melancholly circumstances, and trust that his sojourn here has been of such a nature as will tend to induce him to repeat his visit at no distant day.

The Poles not yet Subdued.—Siberia is in the way to become a new Poland, 200,000 Poles having been sent to that country because of the part they had, in the late movement. Thirty thousand more lost their lives, either in action or at the hands of executioners. It has of late been supposed that the "insurrection" was over, and that Russia had at last fully established her power over the land of the Yagellons and the Sobieskis. That it was already written "Poland was!" and "Order reigns in Warsaw!" But the Polish national Government has just given unexpected proof of its vitality by issuing a proclamation declaring that the revolution is still in progress, despite the representations of Russia, and asserting that the hymn of triumph intoned by the invading Russians is a "lying hymn."

New Mormon Movement.—It is well known that the Mormons have for a long time been thinking of transferring a portion of their population from Salt Lake to some position more easy of access from the sea board, and where they will be less liable to annoyance from the "gentiles," than in their present half-way stopping place on the great thoroughfare from the Mississippi Valley to California. It is now said that they have selected a point in Southern Utah, about 450 miles southwesterly from Salt Lake City, and 150 northerly from El Dorado Cañon, on the Colorado. They will thus be able to obtain such supplies as must come from the seaboard with only 150 miles land carriage. It is furthermore reported that they have stopped work on their great Temple, and every man of note is to hold himself in readiness to start for the New Zion at an early day; at which time the main body of the present population of Mormonism will also be required to move in the the same direction.

Important Drainage Improvement.—The Yolo Canal, a work commenced about four months since, for the drainage of the tule lands on the west side of the Sacramento river—was completed on the 23d ult. This work, together with a levee along the river, was deemed necessary for reclamation purposes; and the contract for its construction was let by the Swamp Land Commissioners to J. Riley and J. Rooney, and operations commenced on the 28th of July. Under the superintendence of C. H. Ball, about two hundred men have been kept at work during the Summer and Fall. The canal starts near Fremont, in the northern part of the county, and drains the low grounds of Cache creek and Putah creek, and connects at the south with Dutch lake, Miners' slough and Steamboat slough. It is about twenty-four miles in length, has twenty-one feet fall, is thirty feet wide at the bottom, is about five feet deep on the average, and the sides slope at an angle of forty-five degrees.

The Virginia City *Enterprise* of the 18th instant says that the newly-elected Legislature of Nevada will pass a Specific Contract Act similar to the one in operation in California, as soon as it convenes.

No Cotton has been planted at the South the past season.

Editors Mining and Scientific Press:—In the editorial notice which you were so kind as to bestow upon my card in your paper of last week, there is a slight error, unintentional on your part, which might, if not corrected, do injustice to others. Under the old company at New Almaden, I acted as Mining Engineer, in charge of the underground work and engineering, from September, 1856, to November 1st, 1863, except when the mine was suspended by injunction. During this same period the late John Young, whom every one loved and respected, was the General Superintendent. After the accession of the Quicksilver Mining Company, I remained as Mining Engineer until April, 1864, Mr. James Eldridge being the General Superintendent; and when he left, in April, 1864, I took charge, as General Superintendent, until November 1st, 1864, when I resigned. You will very much oblige me by making the correction. Yours, etc.,

Sherman Day.

San Francisco, Dec. 1st., 1864.

To Correspondents—"One Called," who writes with reference to a paragraph in the late decision in the late Varney-Wheeler Pan Case, will appear next week. It was our intention to have printed that decision entire in this issue, but it has been unavoidably postponed until next week. The communication of our correspondent will be read with more interest in immediate connection with the decision to which he refers.

The Old Story.—The Grass Valley *Union* learns that several wealthy owners in the Star claim, at Omega, on the Yuba, having obtained a controlling interest have commenced the operation of freezing out the smaller shareholders. For this purpose it is said they have stopped work on the claim, and have levied a heavy assessment. Such operations, wherever they occur, should be carefully noted, and every honestly conducted paper in the State should lend a hand in exposing all parties concerned in them.

A Thanksgiving Dinner.—At Stockton, on Thanksgiving day, Oscar P. F. Kullenbach's mustang stud horse had a fowl dinner, having nipped several of William H. Van Vlear's chickens in his manger and stowed them away, feathers and all, in his stomach.

Mexican Bounties.—The proper government of Mexico offers to foreigners who will, all armed and equiped, enlist to fight against the Maximillian empire, the following bounties; $1,000 for the rank of soldiers and sergeants; $1,500 for lieuteuants and captains, and $2,000 for officers of higher rank. The above bounties are to be paid in land.

A Little too Late.—A large quantity of flour has arrived at this port from Chili since the recent rains set in. Large quantities are also now on the way here. These shipments have been made under the impression that we were to have another dry winter. The speculators have brought their goods to a bad market, or rather the rains have spoiled their market.

Almost as Bad as California.—A Boston paper says there are now one hundred and sixty suits for divorce upon the dockets of the Supreme Court in that city. The causes alleged for judicial separation are cruelty, desertion, criminality, etc. In a majority of cases the wife seeks a divorce from her husband. There is also a large number of petitions of divorced persons to marry again.

A Frightful Accident recently took place at Ulm, from petroleum oil. During a representation at the theater, twenty-four lamps attached to the chandelier suspended from the roof burst in succession, with great rapidity, and the burning oil fell like a shower of fire on the spectators, among whom were a number of ladies. In a moment the dresses of twenty of them were in flames. Several died within a few hours afterward.

A chunk of lead, weighing 1,000 pounds, was lately taken from a mine in Illinois.

S. F. Mechanics' Fair Reports.

COMMITTEE REPORTS

OF THE SAN FRANCISCO MECHANICS' INSTITUTE INDUSTRIAL EXHIBITION OF 1864.

[By authority of the Executive Committee for the management of the Fourth Industrial Exhibition of the Mechanics' Institute, we shall continue, under this heading, until completed, the publication of the Reports and Awards of the Examining Committees in the various departments of the Exhibition, as revised by the Managers to accord with the rules governing the distribution of awards. Where the reports have not been made in form prepared for publication abstracts or digests only will be given. The Managers desire it stated that, while articles originating and manufactured abroad contributed in a degree to the variety and interest of the exhibition, which in return afforded their merits opportunities of becoming widely known, to the advantage of those showing them, the enterprise was intended to be an exposition of the material and industrial resources of this State, and the adjacent Territories, to which the honorary awards must be limited. Believing, too, that the distribution of premiums of several grades among competitors has a greater tendency to produce jealousy and dissatisfaction than to encourage enterprise and efforts for excellence, the Executive Board has determined to allow no second, third, or other inferior grade of Premiums.]

Class XXXIV.

SUB-DIVISION—Seeds.

COMMITTEE:

O. C. WHEELER, ADDISON MARTIN.

Report:

There was only one exhibition of Domestic Seeds in the Fair, and this was made by Mr. DANIEL L. PERKINS, of Oakland, Alameda county, and consisted of 112 varieties of Seeds and 5 varieties of Corn. Mr. Perkins is well known as the pioneer professional seed-grower on this coast, and has now attained a reputation for the purity, vitality and excellence of his seeds, of which any man might well be proud. His exhibition at the present Fair is a testimony to his high order of skill and taste. A beautiful pyramid, studded on all sides to its apex with regularly arranged glass bottles, all properly labeled, gives the observer a most interesting view of this large number of varieties. Mr. Perkins is already reaping the reward of his patient toil, scientific skill and persevering energy, in the large orders for his seeds, made in advance of the crop, from the best seedsmen on the coast. His seeds have also been sent to the Eastern States, and have there been so much admired that he has standing orders to send regularly his full variety. In a short time the importation of garden and flower seeds, except new varieties, must cease. Premium.

S. W. MOORE had a good assortment of imported Grass and Garden Seeds, which are entitled to special mention.

Silk Culture.

L. PREVOST, of San Jose, COCOONS, WORMS AND REELED SILK.—This exhibition was probably regarded by most visitors as the product of some merely fancy-cultural pastime or experiment, of no practical significance or value, while the facts are, that it represented a series of efforts undertaken upon a conviction of the adaptation of our climate for silk growing, and persistently followed up for years, until it seems to be demonstrated beyond doubt that that it is to become a great industrial interest of the State. It is nearly eight years since Mr. Prevost engaged in experimenting in this line of culture, encouraged by Henry Hentsch, Esq., of this city, whose interest and faith in the undertaking was so great that he imported several lots of eggs from China and from France before obtaining any sufficiently healthy to hatch. It was thus several years before any worms were produced, and the first cocoons were raised in 1860. Samples have since been sent to Europe for examination, and Mr. Prevost has certificates from the highest authorities of Paris and Lyons pronouncing the silk FIRST QUALITY.

And it is certain that the silk growers of France and Italy will in the future look largely to California for supplies of sound eggs to recuperate their stocks, which cannot be preserved in healthy breeding condition in climates subject to rain during the feeding season. Already the orders received by Mr. Prevost from these countries are many times larger than he can fill, and indicate that the supply of such orders alone, without reference to the growth of silk, will furnish ample and highly remunerative employment to those engaging in the culture here. The mulberry is said to thrive remarkably in all parts of this State, and our climate affords peculiar advantages, upon which Mr. Prevost has presumed, with entire success, to abandon the laborious and expensive culture practiced in the silk countries of Europe, requiring six times the attention and labor found necessary in the "California Culture," which he has systematized.

There can scarcely be more assurance than is afforded by the experience of Mr. Prevost, of the entire practicability of the profitable prosecution of the SILK CULTURE here. Other gentlemen, well informed upon the matter, are preparing to engage largely in it, and it is not improbable that within less time than has elapsed since Mr. Prevost's first experiments, it will rank with Wool and Wine, or lead them among the important productions of the State.

The highest award of the Exhibition is due to Mr. Prevost.

SUB-DIVISION—Floriculture, Etc.

Report:

In our climate and locality the late Summer and Autumn is an unfavorable season for a floral exhibition, unless large preparations be made for it months in advance. As the florists in the spring remove their stock from pots to the ground (where they require but little care until the rains return again), therefore few of them are able, upon call, at this season to make an extensive show of choice varieties; yet the floral department of the Fair did not lack features of interest. The lattice tower under the great dome, rising from the middle of the fountain to a hight of forty feet, bore upon its terraces a great variety of fine evergreen shrubs and flowering plants, from among which started the numerous water jets refreshing the air, and sparkling in the light as they flashed upward and fell in light sprays to the basin. Seen above other objects from any part of the Pavilion, this central tower, with its evergreen embellishments and fountain jets, formed a grand and agreeable feature of the Exhibition

JOHN O'HARE, of the California Nursery, notwithstanding the disadvantages of the season, exhibited an extensive and choice selection of Green House Plants, Dahlias, Verbenas, Lilies, Cut Flowers and Boquets, frequently during the Fair renewing his stock, and thus maintaining the charm and freshness of his exhibition. Mr. O'Hare also contributed many of the choice evergreens and plants for the adornment of the Floral Tower. The Premium for the best collection of Green House Plants, best Dahlias, best Verbenas, best Lilies, and best Boquets, is awarded by the committee to Mr. O'Hare.

LANZEUR & HUBERT, of the St. Ann's Garden, exhibited a great variety of magnificent Fuschias, Geraniums, Dahlias and Green House Plants, which were frequently renewed and greatly admired. Some of the Fuschias, especially, were of gigantic growth, and thickly piled with flowers. The Premium for the best Fuschias and Geraniums is awarded to Lanzezeur & Hubert.

C. B. MILLER'S Aquaria, Wardian Cases, Rustic Baskets with trailing vines and rare plants, arranged under a large octagon wire summer-house, of elegant design and structure, formed one of the most beautiful and attractive exhibitions in the Fair. The summer-house, manufactured and exhibited by H. T. GRAVES & Co., formed an admirable and appropriate canopy and enclosure for this interesting collection. The Aquaria exhibited by Mr. Miller, and manufactured for him here, are formed entirely of iron and plate glass, and are much lighter and more elegant than those formed of marble, the material still used, in part, at the East and in Europe for those of the dimensions of his largest. Scarcely anything is more interesting than one of these large crystal vessels with its provision of delicate aquatic plants and varieties of fish darting through the clear water, or exploring the miniature rock and coral caves. The plants, if properly selected, supply the water with oxygen, which will keep it clear and pure for months without change, and a provision of pipes will effect a change when required without trouble. The Wardian Cases, covering beautiful and delicate ferns and mosses, growing without care or attention, the orchidis or air plants rooted upon cocoa-nut husks and fragments of bark, or hanging upon sea shells, together with many other rare botanical wonders, contributed to make this a highly interesting and instructive exhibition, for which Mr. Miller is well entitled to a Premium.

FRANK STAEGLICH contributed a large and fine assortment of Grass and Garden Seeds, specimens of a great variety of growing Grasses, Evergreen Shrubs and Plants; but the model Labyrinthine Garden exhibited by Mr. Staeglich was the great wonder and puzzle of the Fair. This consisted of a plot 6x8 feet, laid off with shell-walks, bordered by lines of box hedges, making a linear measurement of several hundred feet, running in parallel and rectangular lines in such a manner that it was impossible for the uninstructed visitor to find the way either in or out from any given point. This was not only an ingenious and interesting puzzle, but a work involving great labor and expense, the grounds being planted with several hundred miniature trees, perfectly rooted and sown with fine grass, which formed a natural coat of verdure. Mr. Staeglich's ingenuity, patience and zeal merits a Premium.

COL. WALKER, of the Golden Gate Nursery, sent in, on two occasions, what about to bloom, a fine Night-Blooming Cereus ("Cactus Grandiflorus,") placing the Directors under great obligations in thus affording visitors an opportunity of witnessing the interesting phenomenon of its rare and transient glory.

CAPT. J. D. FARWELL also laid an obligation on the Managers by the contribution of a magnificent stalk of the "Yucca Gloriosa," bearing a conical pile of fully opened flowers, numbering hundreds and perhaps thousands. Brought in early and planted in wet sand, this floral wonder retained its beauty nearly to the close of the Fair.

JAMES LICK, Esq., manifested an interest which he has always shown in the Exhibition and affairs of the Institute by the donation of a splendid collection of China Asters ("Astor Chinesis,") in the stage of most perfect flower, and undoubtedly one of the finest lots of that beautiful Autumn flowering plant ever seen here.

Class XXXVI.

Domestic Machinery—Sewing and Washing Machines, Wringers, Churns, Etc.

SUB-DIVISION—Sewing Machines.

COMMITTEE:

S. O. BRIGHAM, A. F. HITCHCOCK,
O. C. WHEELER, MRS. C. M. BLAIN,
MRS. H. ROSEKRANS, MRS. A. J. TURNER.

Report:

The keen competition usually made by the leading Sewing Machine Agencies was not maintained in this year's Exhibition—the "Florence" Machine being the sole occupant of the field. The several patterns and styles of this new Sewing Machine exhibited by the Agent, SAMUEL HILL, your committee have carefully and minutely examined. Its simple and finished mechanical construction, and the obvious adaptability of each part to its work has been to us an interesting study. It differs essentially from other sewing machines, having many new and peculiar features. It makes four kinds of stitch, each alike, on both sides of the fabric, has an instantly reversible feed motion, and sews any varying thickness of material, without change of tension. We consider the Florence a decided improvement in sewing mechanism, and deem it worthy the award of a silver medal; and for the beautiful samples of sewing machine work done on this machine we would recommend a Diploma.

[Only the Premium recommended for the work done on the machine can be allowed, as the awards of the Exhibition are confined to articles produced or manufactured on the Pacific coast or the neighboring islands.]

SUB-DIVISION—Washing Machines, Wringers, Churns, Etc.

COMMITTEE:

R. A. MARDEN, DAVID DODGE, C. J. MORRISON.

Report:

Most of the articles in this department offered for the inspection of the committee would require practical experimental tests to determine fully their adaptation to the uses for which they are designed, and it was not in the power of the committee to apply such. They are consequently obliged, after a careful examination, to make up their judgment chiefly upon the mechanical construction and apparent adaptation of the articles to the uses proposed.

In the classes of Washing Machines, a spirited competition was maintained by the "Challenge," "Economy," "Little Giant," and "Monitor." Each of these machines appears adapted to effect a great saving in the department of domestic labor for which they are designed; but, in the judgment of your committee, the "Monitor," exhibited by G. STEVENS, is entitled to the Premium as the best Washing Machine, and next in rank of merit we would place the "Little Giant."

F. B. LAMB exhibited a simple and ingeniously contrived Wash-Board, furnished with a self-adjusting rubber, easily operated with one hand, materially lightening the labor and doing effective work. We consider it very meritorious, and worthy of a Premium.

CLOTHES WRINGERS.—A variety of these excellent household helps were found competing for popular favor. None of them, however, on the claim of originality or superiority, are entitled to a Premium, though we consider the "Eureka," exhibited by M. E. TRAVER & BRO., worthy of honorable mention.

CLAWSON & JOHNSON exhibited a Churn of Eastern invention but California manufacture. The churn was repeatedly tested while on exhibition, and operated so satisfactorily that we cannot hesitate in awarding to it the Premium.

J. & W. C. SALMON exhibited a Churn, which we consider very meritorious, and deserving honorable mention. Other Churns in the Exhibition may have had merits which were not apparent to the committee, and, as they were not pointed out by the parties interested, they are passed without mention.

The Great Sanitary Cheese Hoop, made by T. F. NEAGLE.—This immense hoop is not only calculated to inclose and support the weight of the 4,000-lb. mass, but is so constructed that it can be clamped to or removed from the cheese with facility; as it may be necessary to inclose it for turning or uncover it for exhibition. It serves a good purpose, and is creditable to the skill of the builder.

MRS. A. MCKEON exhibited a Bee Hive, which, it is claimed, combines improvements of much advantage to the health and security of the bees. The improvements consist mainly in the provision of a non conducting straw lining and wire screens. It is thought worthy of honorable mention.

MESSRS. NEWMAN BROS. exhibited samples of Brushes of their own manufacture, equal to any imported and highly creditable to the skill and resources of this enterprising firm. Premium.

F. B. LAMB exhibited a compact and convenient Coffee Roaster, designed to set over any furnace or stove fire, and to revolve slowly by a simple clock-work machinery attached.

T. B. HOTCHKISS—A Butter Worker, simple in construction, and apparently calculated to prove a useful auxiliary to the dairyman.

MRS D. NOAKROSS has in the Exhibition a Gimp Mill for applying the silk thread covering to gimp and tassel cords. The mill appears to operate perfectly, and furnishes the means of prosecuting a new branch of industry here.

MRS. E. MORAIS exhibited an Instrument for folding Shirt Bosoms, which we consider deserving a Premium.

C. NEUMANN—A Patent Lamp Burner, which is quite ingenious.

S. D. SIMMONS—An Egg and Cake Beater, which may be found serviceable to housekeepers.

Several articles which may be properly classed in this department are passed by the committee in the absence of any description or information regarding their origin or the merits claimed for them; and it may not be improper to suggest that exhibitors might find it much to their advantage to attach to their articles such description as would make their claims intelligible.

Class XXXVII.

Domestic Preparations—Pickles, Preserved Fruits, Cured Meats, &c.

COMMITTEE:

S. B. GODDARD, C. R. BOWEN, G. D. WHITE.

Report:

The committee appointed for the examination and comparison of articles in the Fair, entered under Class XXXVII, beg leave to say that they have passed judgment on the articles submitted to their inspection, as follows:

MRS. A. BUNNER exhibits one cass Preserved Fruits in jars, to show merits of a glass preserving jar.

C. NEWMAN exhibits samples of a Patent Preserving Jar, which is in general use in the Eastern States, and which seems to be superior to others on exhibition. The proprietor informs us that a person can seal up one thousand of these jars in a day. It is the invention of the exhibitor, and merits a Premium.

G. W. CHASE exhibits samples of California Horseradish, grated and prepared for family use, a good article.

C. B. HESTER, a mammoth loaf of well baked Bread.

J. D. GODEN, twelve bottles Washing Fluid. Premium.

—— & FISHER exhibit a remarkable fine sample of Corned Beef, which cannot be excelled in quality, though having no competition. Premium.

MARDEN & FOLGER make a good display of Coffee in both the raw state and prepared for the trade and family use; also spices, ground and packed. On tasting their prepared coffee we feel justified in awarding it the Premium.

C. W. BROOKS & Co. exhibit samples of Hawaiian Produce, in the shape of Kona Coffee, Rice, Pulu, Tapioca, &c. These articles are fine in their line, and the Pulu and Tapioca are well deserving of a Premium.

MRS. MAXWELL, two jars of Pickles.

P. B. CONIMS, one case Sauce.

THORA FOSS, one box Mammoth Eggs. Premium.

A. MONTLEZUN, two jars Preserved Eggs. Premium.

H. W. BREWER, an assortment of Fruits of good quality, preserved in cans, also some Raspberry Shrub, which latter is entitled to a Premium.

CUTTING & Co. exhibit a very fine and varied assortment of case goods, consisting in part of Pickles, tastefully packed in various sized jars; Jams and Jellies, hermetically sealed; Pie and Table Fruits and fresh Vegetables preserved in cans; Tomato Catsup; Worcestershire Sauce; Capers; Brandy Peaches, &c., &c., all of California manufacture. These goods are all of very superior quality, and the style of their labeling and packing seems far ahead of imported articles. Of this most important branch of our domestic manufactures we learn that the articles on exhibition are fair samples of what this firm is capable of supplying to the trade in any quantity, and that they give employment to about sixty hands in their manufactory, which is one of the largest of its kind in the United States, occupying as it does the extensive property and buildings, Nos. 21, 23, 25, 27, 29 & 31 Main Street. This branch of industry is of immense importance to the agricultural interests of the State, since this firm alone annually consumes many tons of fruit and vegetables. In view of the merit of these articles, and the means that they are of retaining in the State so much money which would otherwise go abroad, we recommend for Cutting & Co. the highest premium that it is in the power of the Society to bestow.

ZWICK & LOEVEN exhibit samples of Extract of Coffee, which is said to be very extensively used in some of the Eastern States, and to double the strength of coffee, as well as clearing it nicely at a small expense; the experiments exhibited before us were of so satisfactory a nature that we feel warranted in awarding it a Premium.

BRIGNARELLO & MACHIAVELLO make a very fine display of Macaroni and Vermicelli, prepared, it would seem, in almost every form in which it is possible to present this favorite food of the Italian nation. The different grades of the article exhibited are of superior quality, and deserve a Premium.

D. GHIRADELLI'S samples of Chocolate and Cocoa, in the various forms of their preparation, do them great credit, and these articles if not superior, must be equal, to any of foreign importation, and are considered by us worthy of a Premium.

W. K. DIETRICK exhibits Hams, Bacon, Lard, &c., of his own well known brand and quality; also samples of bacon from Hayward, of Victoria, V. I. The committee regret not to have seen a greater display of this kind of produce from the many in San Francisco alone who make the preparing of these meats a business. Those on exhibition by Mr. Dietrick, of his own brand, are of very superior quality, and well entitle him to a Premium.

J. R. NICKERSON, of Placer County, in addition to his large display of fresh and dried fruits, furnished some samples of finely cured bacon, meriting honorable mention.

SUGAR.—Although not entered upon the Catalogue of articles for our examination, it may not be improper for us to refer to the splendid exhibition of Sugars made by the SAN FRANCISCO AND PACIFIC REFINERY. The importance of this successful branch of manufacture is fully appreciated, and its products maintain a high reputation in our market, which could not be affected by any recommendation of this Committee; nevertheless, it seems proper that so important a feature of the Exhibition should at least be mentioned in this report. The long range of tables showing the samples of sugar in the raw state and in all the intermediate conditions up to the refined loaves tastefully (as the juveniles will all testify) and effectively arranged, show not only the progress and enterprise of the manufacturers, but their interest in the Industrial Exhibition, whose highest award is due to this Company.

Class XXXVIII.

Regalia and Military Goods.

COMMITTEE:

A. G. ABELL, CHAS. MAIN, ANDREW JACKSON.

Report:

Your committee, to whom was referred the examination of Regalia and Military Goods, &c., find that MR. NORCROSS presents the finest display of articles of domestic manufacture, coming under the above designation; and that for Gold and Silver Embroidery on Regalia and Military Goods, he should be awarded a Premium.

MR. T. R. JOHNSON exhibits a very handsome assortment of goods of a similar class, as also a very fine variety of imported military embroideries and other goods.

BLAKE & Co. exhibit the best Army and Navy Hats and Caps, of domestic manufacture, and we recommend the Premium for these articles be awarded to that firm. A fine display of imported military goods is also offered by these gentlemen.

MR. D. FENNELL exhibits a pair of ornamented Cavalry Holsters, which deserve honorable mention.

Your committee, although the articles of which they are about to speak do not appear exactly to come within their province, deem it not improper, as they are not mentioned elsewhere, and are found in one of the cases enumerated in this class, to call attention to the Gimps, Fringes, Chenilles, Silk Buttons, Tassels, Cords, and other articles of similar description, exhibited by MR. D. NORCROSS; and as the committee were afforded an opportunity to witness the manufacture of many of those articles, all of which are made here, they recommend that for them a Premium also be awarded to Mr. Norcross.

The committee also desire to notice a very beautiful banner, for the Grand Lodge of Masons in Oregon, which appears in Mr. Norcross' case, and which was painted by MR. FREDERICK NUTZ; and, if it is deemed proper for them to make such recommendation, as it appears to be the finest piece of that kind of work in the exhibition, they would suggest that the Premium for banner painting be awarded to Mr. Nutz.

All of which is respectfully submitted.

Class XXXIX.

Furs, Hats and Caps.

COMMITTEE:

C. T. BLAKE. DAVID D. COLTON.

Report:

Although the exhibition of Furs was made chiefly by two contributors, it was altogether, the largest and finest ever offered at any Fair in the State. The Committee find after careful inspection, that ADOLPH MULLER, is entitled to the Premium for the largest and best assortment of elaborately dressed California Manufactured Furs.

J. C. MEYER & SON, are entitled to honorable mention, for a beautiful and rare assortment of Eastern Manufactured Furs. We deem it not improper to say, that in our opinion, no city in the world can show a finer assortment of rich Furs than were exhibited by these two houses, both of which, in the choice and well assorted display of goods made here, furnished evidence of ample capacity and resource in this line of business.

DR. BEURINS exhibited a fine Tiger Skin Buggy Robe.

H. ASKER exhibited a Robe of Guanaco Skins made by Patagonia-Indians.

A. J. DOOLITTLE, a very fine Fur Seal or Sea Otter Skin taken on the Northern California Coast.

In the Hat and Cap department there were but two contributors each of whom made a creditable exhibition of goods.

LE GAY & Co., exhibited a case of very fine Silk Hats which merit a Premium, although no competition was made in this line.

MRS. C. E. LANG exhibited Childrens' Fancy Caps of various patterns and styles displaying excellent taste, and needle work which should be rewarded with a Premium.

Class XL.

Men's and Boys' Clothing.

COMMITTEE:

J. L. BROOKS. F. ELWELL. E. BOUCHER.
L. SCHWEIKLY. C. BOYERS.

Report:

The goods exhibited in this department were stylish and well made. Each of the contributors offered some one or more articles specially meritorious, and your committe were disposed to award the premiums accordingly as follows:

To T. G. SANFORD, for the best fine Coat, Vest and Pantaloons.

To G. F. WALTER, for the best Business Coat.

To C. A. FLETCHER & Co., for the best Youth's Black Suit.

To JOSEPH & Co., for the best Boy's Clothing.

To M. BURKMAN, for the best Military Suit.

But if restricted by your rule to one award only, for Tailoring Work, then the Premium is due to T. G. SANFORD.

Your committee, however, consider the manufacture of Boy's Clothing a distinct branch of the Tailoring Business, and in their judgment a Premium should also be rewarded to JOSEPH & Co., for the Best Work in this line.

Class XLI.

Fancy Work in Hair, Sea Moss, Leather, &c.

COMMITTEE:

T. GROB. JAS. LINEN.

Report:

Reference to the Catalogue will show that this class embraced a large number of contributions, many of them works of great beauty and excellence. While the labor and pains bestowed upon others seemed, scarcely compensated in the effect produced; the failure being due not so much to the lack of skill and taste in design and execution, as to the unfitness of the materials for the uses attempted. To enumerate all the articles in this department would extend our report unreasonably, and your Committee feel obliged to confine themselves almost entirely to the mention of those to which they deem the awards due. But we desire to say that in our examination, we have found the merits of many of the contributions so nearly equal that it has somewhat embarrassed us to decide which was entitled to the preference; and had the rules of the Exhibition allowed it, we would have been tempted to a more liberal distribution of premiums.

The Fancy Hair Work of several of the contributors was highly creditable in both design and execution. But we think the Premium is due to MRS. ANNA STEIN GREENWALD, for the best Hair Boquet, (exhibited by R. Weber.)

Much taste was displayed in several of the Sea Moss Wreaths and Boquets. But in the judgement of your committee the Premium for the best piece of this work should be accorded to MRS. D. CONRAN.

MRS. S. ATKINSON, is entitled to the Premium for the best Fancy Leather Work Picture Frames, though other work in this line was scarcely less deserving.

A. LAWRENCE, (a blind boy), exhibited a variety of Bead Work Baskets, Vases &c., the ingenuity and beauty of which might have raised a doubt of their being the work of one deprived of sight. But the sceptical could be assured of the verity, as Master Lawrence was found almost every day at the Fair employed upon like work, and he is very properly entitled to a Premium.

The work of the pupils of the Blind Asylum, exhibited by MRS. CLARK, the principal, comprised many pretty and useful articles, showing a surprising proficiency and aptness very gratifying to all interested in the efforts made to lighten the lot of this unfortunate class of our fellow beings.

Other contributions in this department were highly deserving and your committee can only claim that in making the awards they have endeavored to act carefully and impartially without pretending to infallibility in matters of taste and judgment.

Class XLII.

Dress Making, Millinery, Fancy Goods.

SUB DIVISION—Dress Cutting.

COMMITTEE:

J. C. MITCHELL. MRS. STREET.

Report:

The value of a simple and reliable system of dress Cutting, which may be easily understood, and practiced by those who desire or are obliged, to cut garments for themselves and families of children, will be readily appreciated by most ladies and mothers. Your committee appointed to examine the "Mathematical Model" for cutting ladies' and children's dresses, designed and exhibited by MRS MARGARET CURTIS of this city, find it so simple and excellent that it cannot fail to be of the greatest service to those requiring an infallible instructor, assistant and guide in the important art of domestic dress cutting. It is worthy of the highest recommendation and the award of a Premium.

MILLINERY.—In the Millinery line, there were but two exhibitors, MME. PAULINE VERDIER and MRS. M. A. BUTLER, each of whom presented an elegant assortment of articles, tastefully made up from choicest selections of rich fabrics. It is difficult to believe that any display could surpass that made by these ladies, in elegance of style and the artistic management of the delicate and showy materials.

S. ROSENBLAT exhibited an assortment of rich and beautiful laces and elegant fancy goods.

MRS. H. GLAVE exhibited a case of elegantly made Babies' Clothing.

MADAME TEMME exhibited a variety of Fancy Costumes of various styles and periods.

MRS. GOUX exhibited Shawls, dyed in several colors to show the style of recoloring goods, worn or discolored.

Class XLIII.

Plain and Fancy Needle-work.

COMMITTEE:

MRS. JASON CLAPP, MRS. JONA. KITTREDGE,
MRS. G. E. BLASDELL.

Report:

The great number, variety, and nearly equal merits of many of the articles in this department of the Exhibition, rendered the duty of examination and award both laborious and delicate; but, governed solely by a desire to do impartial justice to each competitor, we hope to be accredited with fair intention and conduct, however the accuracy of our judgment may be questioned. As appears by the published catalogue, there are upwards of 120 contributors in this department, each having from one to twenty pieces from examination, and many of them of high excellence; but we feel that only partial justice could be done to the larger number of competitors in any attempt to specially notice other than the articles to which the awards are made, and therefore omit the usual enumeration and mention.

The Premium for the best Worsted Crochet Work (a buggy robe) is due to MRS. T. G. SANFORD.

MRS. W. S. CANAN, of Healdsburg—Premium for the best Needle work Picture ("Scene in Venice.")

MRS. R. VELASCO—Premium for the best Worsted Work in Flowers.

MISS HELEN ADAMS—Premium for the best Chenille Embroidery.

MRS. JULIANA BAYERS, of Sacramento—Premium for the best Bead and Worsted Work, and for the best Netting.

MRS. M. H PARKER—Premium for the best Crape Chenille Work.

MRS SPENCER POOL—Premium for the best, combined, Plain and Ornamental Needle-work (under garments).

MRS. E. DENNY—Premium for the best Tattin.

MRS. DRUEY—Premium for an elegant Down Cape and Trimming.

MRS. H. HALL—Premium for the best Silk Embroidery.

MISS VON ROON—Premium for the best Crochet Bed Quilt.

MRS SOUTHER—Premium for the best Knit Bed Quilt.

MRS. S. J. HILL—Premium for the best Patch-work Quilt.

MRS. C. HARVEY—Premium for the best Plain Sewing (shirt and chemise).

MRS. H. S. LOVE—Premium for the best Cotton Embroidered Collar.

MRS. NANCY BARTON—Premium for a Sun Bonnet, of superior style and make.

MRS. M. ANTHONY—Premium for the best Lace Embroidery.

MISS E. MAFFRE—Premium for an elegantly wrought Hearth Rug.

SUB-DIVISION—Manufactured Tobacco.

COMMITTEE:

J. W. SCHAFFER, T. A. HUENERT, CH. PAPPE,
J. P'RING, J. NEDAUX.

Report:

Your committee for the examination of Manufactured Tobacco find a large and very creditable exhibition of samples, in almost every form of preparation known in the market, and with such evidence of proficiency in manufacture, and the evident adaptation of soil and climate, in many portions of our State, to the growth of the plant, there seems to be no reason why the importation of this commodity should not soon be materially curtailed, and the larger portion of the amount expended for the indulgence, retained for circulation at home. The exhibition in this line was made wholly by two contributors—viz: J. B. HAMMA and R. F. GELIEN.

J. B. HAMMA exhibited samples of various kinds of Snuff and Smoking Tobacco, and is awarded the Premium for the best Maccaboy Snuff and for the best "German" and "Killikinnick" Smoking Tobacco.

R. F. GELIEN made a large exhibition of Snuff, Smoking and Chewing Tobacco, and your committee find him entitled to the award of Premium for the best French Rappee Snuff, and we also recommend that he receive a special Premium for his large and excellent exhibition of Chewing Tobacco, which was without competition.

Classes XLIV and XLV.

Curiosities and Miscellaneous.

COMMITTEE:

GEORGE J. HORE, CHAS. STEADMAN.

Report:

Your committee for examination of the articles found enumerated in the two classes above designated, together with an additional list of late entries, not catalogued or examined in the proper departments, have made such inspection as was found practicable; but in many instances it was not possible to obtain sufficient information respecting the origin and claims of articles examined, and we cannot assume to report a judgment upon such cases. We would suggest that exhibitors might promote their interests and facilitate examinations by placing with their contributions some description or specification of their claims.

PROF. A. DE LEO DE LAGUNA exhibited a large and very interesting collection of ancient and modern coins, medals, etc. Almost every age and people must have been represented in the Professor's cabinet, and he is entitled to the highest credit for this interesting and valuable collection.

E. HERMAN exhibits a case of admirably prepared Birds (Stuffed), and as the best in this line entitled to a Premium.

E. LORQUIN—A finely prepared Eagle (stuffed).

ROBERT MAYERS also exhibited specimens of Stuffed Birds.

— COHEN exhibited an interesting collection of Native Butterflies.

W. GREEN, of Napa, contributed a pair of Buck Horns, very remarkable for the regular curve and perfect correspondence of each branch to the opposite one in every minute particular.

A. WHITMAN exhibits two pairs of Elk Horns, interlocked and inseparable—evidently fastened in some combat of the animals, who were thus bound together to walk side by side through life. The horns are uniform in size, and are twined so handsomely that without the portions of the two skulls, attached, they would appear like double antlers springing from one head.

COL. WARREN'S museum embraced a large collection of rare and curious articles, of great interest and value. Nearly every department of human industry and natural production was represented, and the Colonel is entitled to great credit for the industry and zeal with which he devotes himself to these interests.

O. FULLER exhibits a very handsome Aquarium, of octagon form, containing a large and beautifully formed sheet of coral.

G. E. CROWELL exhibits a Model House, of paper material; and nothing in the Fair furnished the juvenile class of visitors so much enjoyment and satisfaction as this perfectly furnished and embellished Toy House. All the proportions and appointments were complete, even to the bed-room tapers and the clothes pins; showing a degree of ingenuity and mechanical skill which merits a Premium.

S. C. HIGGINS also exhibits a Model Rustic House, of paper material, not so complete in appearance as that before mentioned, but as the work of a lad of 15 years, is remarkably good, and deserving honorable mention.

MRS. NATHANIEL HOLLAND'S Skating Gallery, it is not necessary for your committee to say, is an elegant and pleasing parlor toy, which has been admired by thousands, old and young, while it has contributed largely to our patriotic charities. We are not informed as to the claims of originality, but consider MRS. Holland deserving a Premium for enterprise and skill displayed in producing this effective and handsome piece of scenic mechanism.

MEAD & SON exhibit Children's Rocking Horses, and are, as we learn, the only manufacturers of this article here.

MASTER H. CARLETON—Sample of Perfumery, of fine quality. Master Carleton, though scarcely in his teens, is said to be quite a proficient chemist and metallurgist. The sample of perfumery would certainly detract nothing from the claims of proficiency, and if placed in competition would have stood well for preference.

R. F. BROOKS—A case of Hair Dyes and Perfumery, handsomely put up, and no doubt equal to imported articles in the same line.

MRS. SICKEL exhibits Hair-Dyeing Tinctures.

MRS. CHAPMAN also exhibits Hair-Coloring Preparations, which is considered by your committee preferable to any in competition, as it purports to be a vegetable preparation, which produces its coloring effects without the aid of mineral ingredients.

DR. R. BECKFORD exhibits a preparation—"Golden Eye Water"—which, it is claimed, is an almost infallible cure for sore and weak eyes. Having no occasion to test the claims experimentally, your committee took the exhibitor's reference to a number of citizens of character, and their testimony as to its good effects was unqualified, and we do not doubt that it is a valuable composition for the purposes intended,

C. NEWMAN exhibits a very ingeniously contrived Box for the collection of railway fares. If any such contrivance will answer the purpose sought, this seems calculated to do so, and its ingenuity merits a Premium.

CHURCH & CLARK exhibit a Frame showing the styles of their pieces for Fire-works. The designs were very handsome and the arrangement tasteful. The complimentary pyrotechnic display made by this firm on the occasion of opening the Fair, comprised a great variety the richest and most brilliant pieces, and their extensive manufactory can supply all demands for every description of works in this line. Their enterprise and proficiency are deserving the highest award of the Institute.

W. H. JESSUP & Co. made an extensive and handsome exhibition of California manufactured Matches, of superior quality. It is gratifying to learn that this branch of our home manufactures is progressing successfully. We are informed by Mr. Jessup that their manufactory in this city is turning out upwards of one million matches per day, and the demand will require an immediate enlargement of their works. It is difficult to understand what becomes of this large number of these indispensable little conveniences; but since the consumption must continue, and increase, we hope that the enterprise of this firm will be abundantly rewarded. The company is well entitled to a Premium.

ROBERT DEAGG exhibited a Gang Plank, provided with an elevating floor, for loading freight. It appears well adapted for special uses.

A. DAVID exhibited a very handsome Bath Tub, provided with a heater, and apparatus for vapor, steam or warm water bath. It deserves honorable mention.

J. S. JARVIS, of Stockton, exhibited a number of old style Rush-bottomed Chairs, much more comfortable than elegant, though they were well made and finished; and if they can be furnished as cheaply, should be preferred to cane-seat or other description of common chairs.

MRS. S. BAKER—A pair of very handsome Buckskin Ladies' Riding Gloves.

J. BARMAN—A handsome lot of Terra Cotta Rustic Hanging Baskets and Brackets, deserving honorable mention.

E. DUDGEON—A number of Dudgeon's well-known Hydraulic Jacks; also a Hydraulic Punch. The merits of these useful appliances are so widely known that it is unnecessary to remark upon them here.

CARROLL & LEONARD, of Folsom, exhibited a model Key Bridge, which appeared highly meritorious.

OTTO & WEIDEMAN exhibited a liquid preparation, "Carboncum," said to possess the property of restoring the original qualities to steel which has been overheated or burnt. Samples of cast steel bar were exhibited, showing the grain and appearance of the steel in the original condition, burnt and restored; and it would seem to be a preparation of great value if its effects can be relied on to equal those upon the samples shown.

TURNER & HOFFMAN exhibited several very fine Silver Plate Framed Show Cases, which merit a special Premium.

E. MORRIS exhibited Shirts, Wristbands and Collars of domestic manufacture, and superior style and quality. Premium.

SUB-DIVISION—Confectionery and Candy.

COMMITTEE:

F. W. SMITH. R. A. ALBRECHT. AUG. HESS.

Report:

The undersigned, appointed to examine and report upon the samples of Confectionery and Candy Work on exhibition have inspected the samples in competition, and find the First Premium due to H. BERRE for a finely ornamented Fruit Cake.

EHRENFORT & Co. are entitled to a Premium for an excellent variety of Candies.

If it is consistent with the rules of the Exhibition we would also recommend that a Special Premium be awarded to the "Occidental" Hotel for the fine Confectionery Temple exhibited.

SUB-DIVISION—Laundry Work.

COMMITTEE:

A. DREYFOOS. F. LORD. THOMAS J. PELL.

Report:

Appointed a Committee for examination of the Laundry Work on exhibition, we have carefully inspected the lots in competition, all of which must be accounted work of the best class, and highly creditable to the competitors; but after impartial comparison we find the award of Premium due to L. LELAND & Co., "Occidental" Laundry.

[Written for the Mining and Scientific Press.]

Morning on the Sierras.

The orange light of breaking morn appears
Afar beyond Nevada's rocky spires,
And through the mist clouds of the valley deep
The silvery lake reflects the orient fires:
Beyond, the distant peaks of cloud like snow
In roseate tints are gaudily arrayed,
And, rising slow, the bursting sun peeps forth,
'Till all the stretching landscape is displayed.

All nature is awake, and with the sun
Puts forth the charm which budding Nature yields.
The woodlands, warbling with enchanting sounds,
The blooming vales, the garniture of fields—
The modest flower just peeping o'er the sod,
With pendant dew drops sparkling in the light,
That seem to speak unto my list'ning ear
And gently tell of some unknown delight.

The green-clad valley and the wood-crowned hill,
The forest deep, with many a moss grown shade,
And singing brook, that glimmers in the beams
Through threads of mist that now begin to fade;
Sky, valley, river lake and blooming light
Peep through the shadowy mist-cloud, rent and torn,
With beauty, rare, diversified and bright,
And, smiling, greet the dawning light of morn.

The eaglet rouses with the coming dawn
And circles o'er the mountains' distant hight,
The sea-gull courses o'er the ocean wave,
With wing bare-tipped in momentary light;
The hare, alarmed, springs through the rustling fern;
The owlet croaks from his sequestered bower;
The shrill lark carols forth his morning hymn,
In sweet notes swelling from his lofty tower.

And now the breezes of the morn awake,
And gently whisper as they flutter by,
And shake the dewdrops from the opening flowers,
Or wake the echoes with a plaintive sigh.
They rock the little wood-bird in his nest,
And, playful, ripple o'er the mountain stream,
Or rouse the woods from their majestic rest,
And stray where brightest fall the golden beams.

O, what a charm does early morn possess
To rouse the slumbering world again to life—
To give to age the ruddy hue of health,
And nerve the heart to conquer in the strife!
The brooks, the trees, and e'en the golden rays,
As through the pines so timidly they peep,
Awake sweet memories and fancies rare,
And give no food for meditation deep.

FLOY FAVORITE.

Virginia, Nevada, Nov. 23, 1864.

HOME FINANCES.

Nothing of much interest has transpired in financial or commercial circles this week. Transactions in Bank or in the open market were somewhat interrupted by the beautiful rains that fell almost unceasingly until Thursday last, and since then, the requirement for business purposes has not been active. Yesterday was regarded as a light "steamer day" among bankers and we could learn of no special inquiry for money outside of the legitimate demand to meet payments regularly made at such a period. Rates were ruling in bank at 1½@2 per cent per month for unexceptionable short paper and other good collateral security. On the street a wide range still prevails and as high as three per cent. per month is frequently paid to money lenders by those whose wants are pressing. The advent of a propitious rainy season, is hailed by all classes with the greatest satisfaction. Incalculable benefit to money interests throughout the interior will doubtless be the immediate result.

Receipts of treasure from the interior since Saturday last have been much lighter than usual and amounted to some $600,000. The branch mint in this city has taken about $250,000 of this amount. This establishment will be closed on Monday for annual settlement, but deposits of refined bullion for coinage, can be made until the 12th inst. The supply of bullion was light yesterday, and the requirement for shipment greater than was anticipated. Gold bars advanced to 840@850. Silver was quotable at former rates, 1 per cent. premium, to 2 per cent discount.

Exchange on the Atlantic cities for bills payable in currency were sold at 100@110 per cent premium on gold. Telegraphic transfers are still current at 4½ per cent. premium and sight drafts payable in coin at 2½@3 per cent. premium.

Legal Tenders have been comparatively steady during the week at 48@49c. A good demand prevails.

THE RECENT RAINS.

The recent rains have furnished an abundance of water for both miners and farmers. The miners, in all directions, are now busily engaged in making preparations for an active campaign. Picks, shovels, sluice boxes, hose, etc., are in great demand, and will be freely and energetically employed in attacking the great earth banks of deposit, which it is confidently expected will be thus forced to discount most freely, the coming winter. Already, in anticipation of the "good time coming," we begin to meet cheerful countenances and happy greetings wherever we turn. The hearts of all are filled with exceeding joy by reason of the copious outpourings of water, for which we have waited so anxiously, so patiently and so long. The streams are now all running banks full of the liquid that will open the bosom of the earth alike to the shining gold and to the golden fruit. Seed time and harvest are both close at hand.

It is seldom that the rain has come in such copious showers as has marked its advent the present year. Truly it may be said "the windows of Heaven were opened," for every part of the State has been favored in the largest desirable measure. Of course some damage has resulted, and some inconvenience has been experienced, but even the unfortunate forget their individual losses in view of the immensity of the public good. Even at this present writing we see no signs of any hold up to the rain, which is still falling as gently and moderately as could be wished for to accomplish the greatest good with the least possible evil.

We have received from Dr. Kibbe, who possesses one of the Smithsonian rain guages, the most perfect instrument for measuring the fall of rain ever invented, a record of the fall of rain in Grass Valley, from the 24th to the 28th ult. which reads as follows:—

"November 24th, 9 o'clock, A. M.—.41 25th—.03; 26th—3.93; 27th—2.57; 28th—1.82; total 8.76."

The above record, it will be perceived, is brought down only to Monday last at 9 A. M. Since that time probably not less than five inches additional have fallen. The Dr. has promised to furnish us with regular weekly reports. We see it stated that about 15 inches have fallen during the present season, thus far in Nevada. In this city the total fall since the 24th instant, up to Thursday evening, has been 6.21.

ANOTHER FAIR.—As will be seen by report of the regular meeting of the Mechanics' Institute that enterprising body has determined upon holding another fair in the autumn of 1865. Our citizens are now alive to the benefits and importance of such industrial exhibitions. With the experience of the present year, on the part of both exhibitors and managers, the coming fair will certainly be the most extensive affair ever undertaken on this coast, and must positively prove the grandest success.

APPOINTMENT.—W. O. Andrews, Esq., Notary Public, at 626 Montgomery street, has been appointed Commissioner for the States of Nevada, Massachusetts and Maine, and the Territory of Arizona. See his card in another column.

"STAND FROM UNDER."

On or about the 1st of January, 1865, we intend publishing a list of the Mining Companies which have long remained delinquent upon our books for advertising, together with the names of the Secretaries and Trustees, in cases where ample reasons for non-payment are not given. We intend that this list shall be a public warning. Let those interested read and heed.

AN HERMETICAL BARREL.—Petroleum has developed a necessity which has been the mother of another invention. It is well known that crude and refined oils, from their great permeability, readily penetrate through all wooden barrels or packages hitherto used, so that their loss from leakage and evaporation has been a large per cent., amounting to millions of dollars annually. To prevent this, metallic barrels, metal-lined barrels, etc., have been substituted, but only to prove impracticable. Louis S. Robbins, of New York, says the *Scientific American*, has discovered that by first coating a barrel with drying linseed oil, which answers to the cuticle of a tree, and then treating the wood of the barrel from the inside with a strong solution of potash—the natural circulating medium or blood of vegetation—that each barrel so treated will take up about eighteen pounds of water, which, from the oil coating on the outside can never evaporate, nor can the oil pass through, thus making it essentially and positively a hermetical package. Barrels so treated have been filled at the oil wells of Oil Creek, and after several transshipments and delays of several weeks on the way, have arrived at the Erie Railroad depot, Jersey City, in perfect condition, clean, dry and odorless as so many barrels of flour. They have not lost a drop of their oil in their passage. These barrels have never been coppered, nor will they ever require to be. Dealers and shippers in oil are daily visiting this remarkable shipment of oil, and speak of it as one of the greatest discoveries of the day. It not only applies to petroleum, naptha, benzine, turpentine, etc., but to all oils, fluids and semi-fluids. For butter, lard, etc., it furnishes an invaluable package, etc., absolutely insuring it against loss by leakage, absorption, evaporation, or taint.

THE RIVOT PROCESS COMPANY.—The certificate of the above styled company was duly filed in the County Clerk's Office of San Francisco on the 28th ult. The object of the association is to conduct the business of making, using, selling and licensing Rivot's Improvement of treating argentiferous and auriferous ores. Capital stock, $1,000,000, divided into 10,000 shares of $100 each. The said corporation shall exist for thirty years, and their principal place of business shall be San Francisco. Trustees: Jacques Gallairdon, William Burting, and J. B. E. Cavallier.

NEW YORK NEWSBOYS.—One of the most interesting features of the "Newsboys' Lodging House" in New York city, is a table full of holes, which are numbered, and in which the boys are encouraged to save their money, some of them saving from twenty to thirty dollars per month. Some of these boys evince considerable business sagacity. As an instance, two of the lads have just started for Europe, worth two thousand dollars each—the result of their earnings.

PROFESSOR SILLIMAN has recently made an examination of the quartz ledges and gravel ranges between the Middle and North Yubas, and pronounced the region between the two rivers far richer in minerals than the Washoe country. He considers the ledges about Grass Valley unequaled by those of any quartz region he has visited, exceeding certain sections of Arizona.

WOOD PAPER.—A city contemporary intimates that the manufacture of wood paper is a failure. Such would hardly appear to be the fact when the American Wood-Paper Co., at Providence, R. I., has just advertised for 10,000 cords of wood suitable for their use.

RAPID INCREASE.—During the last four years the juvenile population of San Francisco—children under twenty-one years—has more than doubled.

THE famous, though ill-fated ship Aquilla, is now lying moored off the wharf at Steamboat Point, between Second and Third streets.

THE fish oil of the Eastern fisheries which sold for nine dollars a barrel a few years ago, now brings forty dollars.

THE flax crop in Ireland this year is very large. In the raw it will be worth at least five million dollars.

EIGHT thousand miners are now on the strike in England.—*Exchange.*

There are 20,000 in this State who will strike, now the rain has come. Miners live by striking.—*G. V. Union.*

Professional Cards.

W. O. ANDREWS,
NOTARY PUBLIC,
—AND—
Commissioner of Deeds for the State of Nevada and the Territory of Arizona,
AND FOR THE
STATES OF MASSACHUSETTS AND MAINE.

To Prospectors.
THE Directors of the San Francisco PACIFIC METALLURGICAL WORKS offer the following inducements to Prospectors:
NOTICE.—Knowing it will benefit our country to have it well prospected, we agree, if any party will forward us samples of minerals of any kind for assay, express paid, inclose TWO DOLLARS for the same, to return them a correct assay, with the best method of working, and feasibility of having the same worked in this city.

THE Proprietors having recently added to this Establishment the latest and most approved Machinery for the Reduction and Testing of ORES of all sorts—either in large or small quantities—are prepared to test Ores by such process as may be ascertained best suited to their chemical character, after a careful analysis being first made. Assays, either in the humid or dry way, made of all Minerals. Also, Refining and Cupellation attended to.
☞ Particular tention paid to the Smelting of Copper and Silver Ores.
S. P. KIMBALL J. R. MURPHY.
14-3m

Volcanic Smelting Furnace.
PERSONS desiring information as to the Use and Economical properties of this Furnace, and intending to make use of the same, when satisfied of its superiority over all other means of reducing ores and separating metals from the sulphurets, can obtain all needed explanation and advice in regard to the same, and the terms of sale of rights to use the same, on application to Col. J. D. Stevenson, or Mrs. E. J. Hall, Proprietress, 633 Third street, San Francisco.
Drawings may be seen at the office of Col. J. D. Stevenson, No. 614 Merchant street.
The time required for reducing ores by this Furnace is from one to eight hours, and the amount of fuel only one-tenth as much as is consumed by other processes
The process of condensation is applied to this Furnace which will save all those portions of precious metals which usually escape in a volatile form.
The attention of all interested in the subject is requested to examine the important results obtained by this process.
Parties wishing will be allowed to erect a trial furnace of a capacity for smelting one ton or more, on signing an obligation to pay the usual fee for the right to use it, should they continue to make use of the invention for a longer period than two months.
v9-20tf **MRS. E. J. HALL, M. D.,** Proprietress.

Evening Instruction in Anylitical Chemistry and Assaying,
Conducted by Thomas Price.
(Agent for the Swansea Ore Importers in California.)
HAVING FITTED UP A LABORATORY ESPECIALLY for instruction in Analysis and Assays, the subscriber begs leave to announce that
A NEW CLASS WILL BE FORMED
On the 1st of June. For terms apply at the Laboratory, on the evenings of Tuesday and Saturday at 7 o'clock; or at the office of the "Pacific Mineral Company," Odd Fellow's Hall, Montgomery street. THOMAS PRICE.
San Francisco, May 10th, 1864. 20

A New Light for Manufactories.

Professor Seely, of this city, has obtained a patent for an electrical light on a principle which very strangely does not seem to have been thought of before as the best and by far the most economical mode of producing light by electricity. He employs the current generated by an ordinary frictional electrical machine, and obtains the light by interrupting the current. It has long been known that a very brilliant and steady light might be procured in this way, but the objection to its use is the uncertainty in the action of the frictional machine. Dry air is a very poor conductor of electricity, and when a machine is excited in such an atmosphere the electricity will remain in tension for a considerable time. But moisture in the air conducts the electricity away, and when the moisture reaches a certain point the fluid is removed so rapidly that the machine will not work. Professor Seely's invention consists in making the action continuous in all weathers. This is effected by surrounding the machine with a glass case, and keeping the air within the case dry by means of chloride of calcium or other hygroscopic substance.

It has been observed that when the conductor of an electrical current is interrupted in a way to draw a spark across the break, the brilliancy of the spark varies with the material by which the conductor is terminated at the break. Professor Seely is now engaged in experiments to ascertain what material will produce the most intense light."

If the apparatus works according to anticipation a cotton mill may be lighted without any current expense, except the small power to turn the electrical machines. As in mills driven by water there is always a surplus of power during the winter months, the only time when lights are required, there would be no expense for this light except the first cost of the apparatus, which would be quite moderate. —*Scientific American.*

PATENT-LEATHER belts are used in England for out-door work. They are said to be impervious to damp and retain their length in all weather.

ENLARGED.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

IMPORTANT DISCOVERY
—IN THE—
Photographic Art.
Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.
[PATENT APPLIED FOR.]
THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a
SOFTNESS, CLEARNESS AND DELICACY OF TONE
unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.
In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privilges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.
"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.
☞ The public are invited to examine specimens at my Gallery. ☜ **JACOB SHEW.**

MEETING OF THE MECHANICS' INSTITUTE.—The regular monthly meeting of the S. F. Mechanics' Institute was held at the Library of the Association, on Thursday Evening last. The principal subject for discussion was the resolution of Mr. A. S. Hallidie, instructing the Directors to make all necessary arrangements for holding an exhibition in 1865, which resolution was laid over from a special meeting held last week. The matter was well discussed by President Britton, Messrs Taylor, Nunan, Porter, Harrison and others, and the resolution unanimously adopted. The Treasurer's report shows the receipts of the late Fair to have been about $41,000 against an expenditure of $36,000. Considerable interest seems to be felt in the matter of holding another Exhibition, and the attendance was larger than usual.

CORRECTION.—It was Hendrickson's chimney top, which worked so successfully on the smoke-stack of the engine at the recent Mechanics' Exhibition, instead of Harris', as we inadvertently stated last week.

1852. 1864.

TWELFTH YEAR OF PUBLICATION.

THE GOLDEN ERA,

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in the Golden Era.

The most popular Novels of the present day—

"THE DOCTOR'S WIFE," by Miss Braddon.

"OUR MUTUAL FRIEND," by Charles Dickens;

published as Serials, from week to week, in THE GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the Contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California, and on the Pacific Coast; also correspondents and contributors of distinguished talent in the Atlantic States and Europe; including "Orpheus C-Kerr," Fitz Hugh Ludlow, G. B. Densmore, "Mark Twain," Dan De Quille, Florence Fane, Miss Emma Hardinge, Sarah E. Carmichael, Aanie E. Fitzgerald, "Occasia Owen," Alice Mason, William Simpson, Chas. F. Stoddart, "Iua," H. C. Williston, "Albion," "Fairfax," Bouncel, Mary Kyle Dallas, Margaret Hosmer, and many other accomplished writers of Fiction, Romance, Novels and Stories; Poetry, Essays, Sketches, etc., etc., comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States or Europe.

The proprietors of the GOLDEN ERA announce the receipt of advance Sheets of Miss M. E. Braddon's New Novel,

The Doctor's Wife,

The most brilliant effort of the celebrated author of "Aurora Floyd;" "The Outcasts;" "Three Times Dead;" "Lady Audley's Secret;" etc., etc.

"THE DOCTOR'S WIFE," now in course of publication in London, is universally pronounced to be Miss Braddon's greatest production. It will be completed in sixteen numbers of THE GOLDEN ERA.

TO ADVERTISERS!

Best Advertising Medium—The "Golden Era" is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village, and mining and agricultural precinct in California, and offers unusual and unequaled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

DUNBAR'S
PATENT SELF-ADJUSTING
Piston-Packing.

Requires no Springs or Screws; Is always Steam Tight, without excessive friction, and never gets slack or leaky.

IT WILL SAVE EACH SEASON MANY TIMES ITS COST in friction, time, steam and power. No engine, old or new, should be without it. It can be easily fitted to old or new Pistons.

Having obtained the Agency of this VALUABLE IMPROVEMENT, I am prepared to furnish it wherever desired. For further information, address HENRY S. SMITH,
23v8 Golden State Iron Works, San Francisco.

IMPROVED WATER-WHEEL,
—PATENTED BY—
JOHN TYLER, WEST LEBANON, N. H.

Giving the Maximum Power with the Minimum Cost; Having the Following as Some of Its Advantages Over Others—Giving the Best Percentage of Water Used, Durability;

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—It can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 500 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address

SMITH & HANSCOM,
15v8-3m Golden State Iron Works, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

9-dfatf A. J. SMITH,

FARRAND'S
Oscillating Amalgamator,
RECEIVED THE
ONLY PREMIUM
AWARDED FOR AMAGAMATORS
At the Recent Industrial Fair
OF THE
Mechanics' Institute of San Francisco.

Committee of Awards.

O. BELDEN, W. T. GARRATT, H. P. WAKELEE,
O. GORI, GEO. JOHNSON, C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall, and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, whilst the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulppurets, as also for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,
R. L. OGDEN, Agent, SAN FRANCISCO.
S. E. corner Montgomery and California streets.
v9-I9

Disney's Cylinder Amalgamator.
The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where.

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.
San Francisco, June 23, 1864. 1-3m

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percetage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 864.] HEPBURN & PETERSON.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from which it passes again to the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.
sep21

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.
San Francisco, April 1st. 1864. 1v8-tf

SALMON'S
PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any other yet presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to attend and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a Stone or Iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of wings placed like a screw propeller on the muller-shaft, force a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarity of propeller-screw and side wings, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The inventors of this machine are practical Mechanics as well as experienced miners, and the machine offered by them to the public is the result of long experience and close observation. Manufactured at the San Francisco Foundry, San Francisco, Cal. by

J. & W. C. SALMON,

To whom all orders should be addressed. 15

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen; Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber is also perfecting a HAND MACHINE for Miners engaged in prospecting, which will work 25 pounds of ROCK at a time, and which will weigh about 125 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,
At the Novelty Iron Works, Nos. 37 & 39 Fremont street.

New Mining Notices.

Manzanilla Mining Company, Sinaloa, Mexico.

NOTICE.—The Semi-Annual Meeting of the Stockholders in the above named Company, for the purpose of electing Trustees, and the transaction of such other business as may come before the meeting, will be held on Wednesday, December 14th, 1864, at 7½ o'clock, P. M., at the office of the company, No. 706 Montgomery street, San Francisco. A full attendance is requested, as business of importance will be brought before the meeting. By order of the Board of Trustees. E. C. McCOMB, Sec. pro tem.

23

Animas Silver Mining Company, Ventanas, District of San Dimas, State of Durango, Mexico.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 3d day of December, 1864, an assessment of one dollar per share was levied upon the Capital Stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, No. 418 Montgomery street, San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 7th day of January, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 21st day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the] sale. By order of the Board of Trustees.

OEO. A. HILL, Secretary,

Office, No. 418 Montgomery Street, San Francisco, Cal.
dec3-23-4

Rogers' Silver Mining Company, Flowery District, Storey County, State of Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 1st day of December, 1864, an assessment of two dollars per share was levied upon the capital stock of said Company, payable immediately in United States gold and silver coin, to the Secretary, at his office, No. 103 California street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Thursday the 5th day of January, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold at public auction on Monday the 23d day of January, 1865, at 12 o'clock M. of that day, by John Middleton & Son, at No. 400 Montgomery street, San Francisco, to pay the delinquent assessment thereon, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

JNO. F. POPE. Secretary.

San Francisco, Dec. 3, 1864. 23-4

Ontario Mining Company, Little Miami Ledge, Reese River Mining District, Lander County, Nevada.

NOTICE.—There is delinquent upon the following described stock, on account of Assessment levied on the 17th day of October, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

And in accordance with law, and an order of the Board of Trustees, made on the 1st day of November, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, by Maurice Dore & Co., at their salesroom, No. 327 Montgomery street, San Francisco, on the 17th day of December, 1864, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

C. W. HAYDEN, Secretary.

Office, No. 522 Montgomery street, San Francisco. 23

Revolution in the Cotton Trade.

When the rebellion inaugurated itself, the loss of cotton was regarded as an unmixed and irremediable loss. The world wanted cotton, and what could satisfy the want? What could prevent foreign intervention—what meet our own requirements? The rebellion was to a great extent based upon cotton, and cotton would eventually overpower patriotism, international comity and every supporting reason for right. This was a leading argument at the commencement of the civil strife, but thus far it has not proved itself. In addition to the large supply then on hand, India, China and other regions have been stimulated to compensate for our loss, and the summary of results approximates more closely to its antecedents than was expected by the most sanguine.

The latest reports from the British markets report steadily increasing supplies, and a fall in the price of sixpence sterling per pound from the highest point. This large decline has caused serious difficulties among speculators, aggravated by the stringency of the English money market. The stock in Liverpool on the 17th ult., reached 391,000 bales or considerably more than double the quantity held at the corresponding period of last year, and an increase of 140,000 bales since the 1st of September of the present year. The British supply for 1864, at the present rate of increase, will reach nearly or quite 2,500,000 bales, which would admit of a weekly consumption of more than 48,000 bales, a trifle more than in 1860, the year of largest consumption.

Thus, after a three years' blockade of our Southern ports, the supply of cotton in England is found to be equal to that of the most prosperous year immediately preceding the rebellion. The moral of all this is, in our blindness South, we have bartered, for a time, without equivalent, the immense wealth which was ours from this source, and have given it to others, and all because, under the leading of a few ambitious politicians, the best Government on earth was sought to be overthrown. The result is the penalty of Southern want of fidelity to the Nation and the Constitution. With the Union restored, however, there is reason to believe that the production of cotton will be speedily restored to its former magnitude. It has been conclusively demonstrated that no other country can equal us in the growth of the long stapled article, which is indespensably necessary to the production of the leading textile fabrics, and no other country can compete with us in regard to prices.

The fall in values on this side of the Atlantic is about seventy cents per pound from the highest point, and though our supplies are at present very light, the course of prices will no doubt be governed, to a large extent, by the ruling of the Liverpool market.—*N. Y. Shipping List.*

MINING COMPANIES and others connected with the Mining Interests of California, will find all possible desired information in the *Mining and Scientific Press* of San Francisco, which is an ably edited Journal, smartly handled, and well up to the times. The Mining Companies of California, are awake to the advantages of having their Mining Notices, comprising Assessments, Dividends, Elections, &c., concentrated in the advertising columns of one Journal, as we notice in the issue of the *Press* of May 7th, there are no less than seven pages of this interesting matter.—*U. S. Mining Journal, Railroad and Financial Advertiser, New York.*

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—EDS. STILL IMPROVING!

VOLUME IX

—OF—

The Mining and Scientific Press

COMMENCED

ON THE FIRST OF JULY, 1864,

WITH

An Enlargement of Its Pages.

Sixty-Four Columns in Each Number.

PUBLISHED EVERY SATURDAY.

THE PROPRIETORS of this useful and now important journal experience much satisfaction in returning acknowledgements to their ardent friends and rapidly increasing patrons who have substantially contributed to the remarkable success of the PRESS during the past six months. By aid of the ACCUMULATING PATRONAGE now being properly bestowed upon the

ONLY TRUE MINING AND MECHANICAL MEDIUM

Upon this Coast, we are enabled to prove our appreciation such marked favor by rendering the public one of the

Largest, Handsomest and Most Useful

journals now published. With this view we shall exert our best energies, and continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,
An Economizer for Mining Advertisers,
Reliable Reporter for Shareholders.
Faithful Monitor for Stockdealers,
An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,
And a Helpmeet to all Industrial Classes,

of fact, upon the Pacific Coast. We shall give accurate and quient

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies, Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the Inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the publication of MINING NOTICES.

OFFICE in Government House, Nos. 11 and 56, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

C. W. M. SMITH.....W. D. EWER.....A. T. DEWEY.

Reports of the Exhibition.—Owing to the omission of exhibitors of certain classes to elect committees of award, the Executive Committee of the Institute, at its meeting of Oct. 27th, authorized the President to select a special committee to act in the premises and report upon articles thus inadvertently omitted from the several reports. The report of this special committee, together with general report of the Executive Committee, will appear in due time.

To News Agents.—After this date we shall furnish no dealers, outside of this city, with the PRESS upon any other terms than those of regular subscription. Those who will forward us the names of new subscribers shall receive liberal commissions.

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal news agents.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alteration, which they may desire made in their advertisements, at their earliest convenience. New advertisements should be sent in as early as possible.

DEWEY & CO., Publishers.

Office, 11 Government House, corner Washington and Sansome street, San Francisco.

"THE MINING AND SCIENTIFIC PRESS."—We would call attention to the advertisement of "The Mining and Scientific Press," (Messrs. Dewey & Co., Proprietors), one of the best conducted and most valuable weekly journals published in America.—*Golden Era.*

Bound Copies for Sale.—Bound copies of Volume VIII, complete, of the MINING AND SCIENTIFIC PRESS, from January 1st to July 1st, can be procured on application to the office.

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the same, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day previous to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices herein before provided for, nor by the non-performance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

INVENTORS AND INVENTIONS.—Let us not cheapen inventions, but be kind to the inventors; beware of killing the goose that lays the golden egg! Many inventors die before the hour of triumph; others falter by the way. Invention is a struggle, a conflict, almost a battle; if the victors are rewarded, the dead are honored and the wounded carefully attended to. Glorify the inventors who succeed; cover with an indulgent self-respect the faults of those who fail; and soothe the last years of the wounded—those invalids of industrial science who have known only the pains of the fight, and always remained ignorant of the joys of victory. —[Dumas.

Mining Notices--Continued.

Ashland Mining Company, Moss Lode, Colorado Mining District, Arizona.

Notice is hereby given that at a meeting of the Board of Trustees of said company, held on the 16th day of November, 1864, an assessment of 50 cents per share was levied upon the capital stock of said company, payable on the 17th day of December, 1864, in United States gold coin, to the Secretary, at his office, No. 613 Montgomery street, San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday the 17th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday the 3d day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

GEO. T. KNOX, Secretary.

Office, No. 613 Montgomery street. nov19-21-4

Arizona Consolidated Mining Company, Eureka District, Arizona Territory.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 19th day of October, 1864, the several amounts set opposite the names of the respective shareholders as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Butler, Mrs S F	154	bal 17	$3 40
Hardy, L J	132	bal 4	80
Lewald, George	33	bal 28	5 60
McNeil, Patrick	25	50	10 00
Smith, George	39	bal 4½	90

And in accordance with law, and an order of the Board of Trustees, made on the 24th day of September, 1864, so many, shares of each parcel of said stock as may be necessary, will be sold at the office of the company, on the 5th day of November, 1864, at the hour of 1 o'clock, P. M., to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

J. WARREN CLARK, Secretary.

Office, No. 430 Montgomery street, San Francisco. [14

Postponement.—The above sale is postponed until Monday, December 5th, 1864, at the same hour and place. By order of the Board of Trustees.

17-6 J. WARREN CLARK, Secretary.

Mammoth Gold and Silver Mining Company, Rock Spring District, San Bernardino County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of the said Company, held on the 19th day of November, 1864, an assessment of sixty cents per share was levied upon the capital stock of said Company, payable on the 21st day of November, 1864, in United States gold or silver coin, to the Secretary, at the office of the company, No. 611 Clay Street, Room 8, San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 9th day of January, 1865, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

nov26-22-4 GEORGE BOWER, Secretary.

New Era Copper Mining Company, Salt Spring District, Tuolumne County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 18th day of November, 1864, an assessment of 25 cents per share was levied upon the Capital Stock of said Company, payable on the 19th day of November, 1864, in United States gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 7th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

C. B. TOWLE, Secretary.

Office, S. W. Corner of Stockton and Washington streets, San Francisco, nov19-21-5

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the Mining and Scientific Press. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

Oxford Beta Tunnel and Mining Company, Silver Hill, Esmeralda District, Nev.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 7th day of November, 1864, an assessment (No. 9) of 50 cents per share was levied upon the Capital Stock of said Company, payable on the 9th day of November, 1864, in United States Gold Coin, to the Secretary, or to the Superintendent at the mine.

Any stock upon which said assessment shall remain unpaid on the Saturday the 19th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 28th day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

GEO. H. PECK, Secretary.

Office, Corner Broadway and Sansome streets, San Francisco, California. nov12-20-4

Ontario Mining Company, Little Miami Ledge, Reese River Mining District, Lander county, N. T.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 17th day of October, 1864, an assessment of twenty-five cents per share was levied upon the capital stock of said company, payable immediately, in United States Gold and Silver Coin, to the Secretary, or to Jos. S. Currie, in Austin, N. T.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 3d day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 17th day of December, 1864, to pay the delinquent Assessment, together with the costs of Advertising and expenses of the sale. By order of the Board of Trustees.

C. H. BURTON, Secretary.

Office, Room No. 4, N. W. corner Clay and Front streets San Francisco, Cal. 19-4t

Pena Silver Mining Company, Location of Mine, Triunfo District, Lower California.

Notice.—There are delinquent upon the following described stock on account of assessment levied on the 21st day of July, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

And in accordance with law and an order of the Board of Trustees, made on the 19th day of September, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the salesroom of Maurice Dore & Co., No. 327 Montgomery street, on the 5th day of December, 1864, at the hour of 12 o'clock, M., of said day, to pay said delinquent assessment thereon, together with the costs of advertising and expenses of the sale.

L. C. DODGE, Secretary.

Office No. 406 Front street, San Francisco, Cal. 21

Postponement.—The above sale is postponed until Thursday, December 15th, 1864, at the same place and hour. By order of the Board of Trustees.

23-2t L. C. DODGE, Secretary.

Silver Prize Gold and Silver Mining Company, Silver Mountain District, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 17th day of October, 1864, an assessment of 15 cents per share was levied upon the capital stock of said Company, payable on the 17th day of October, 1864, in United States gold coin, to the Secretary, or to the Superintendent at Silver Mountain.

Any stock upon which said assessment shall remain unpaid on Saturday the 19th day of November, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday the 3d day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. WARREN CLARK, Secretary.

Office, 430 Montgomery street, San Francisco.

Postponement.—The advertisement of stock delinquent on the above assessment is hereby postponed until Saturday, December 17th, 1864, and the sale thereof until Saturday, December 31st, 1864. By order of the Board of Trustees.

21-4 J. WARREN CLARK, Secretary.

Santa Cruz Petroleum Oil Works Company—Located in Santa Cruz County, California.

Notice is hereby given that at a meeting of the Board of Trustees of said Company, held on the 31st day of October, 1864, an assessment (No. 9) of twelve and a half (12½) cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary at his office, No. 53 Montgomery Block, San Francisco.

Any stock upon which said Assessment shall remain unpaid on the 2d day of December, 1864, will be advertised as delinquent on Saturday, the 3d day of December, 1864, and unless payment shall be made before, will be sold on Saturday, the 17th day of December, 1864, to pay the delinquent assessment thereon, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

W. FELL, Secretary.

Office, No. 53 Montgomery Block. nov5-19-4

Tallulah Mining Company, Sierra District, Humboldt County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 5th day of November, 1864, an assessment of $2.50 per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary at the office of the company, No. 418 Montgomery street, San Francisco, California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 10th day of December 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 24th day of December, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

GEOROE A. HILL, Secretary.

Office, No. 418 Montgomery street, San Francisco, California. nov5-19-4

United States Mining Company, Virginia District, Storey County, Nevada.

Notice is hereby given that the Annual Meeting of the above named Company will be held on Monday, December 26th, at 2 o'clock, P. M., at the office of the Secretary, Nos. 8 & 10 Government House, corner of Sansome and Washington streets, San Francisco, Cal.

22-5 J. M. BUFFINGTON, Secretary.

United States Mining Company, Virginia District, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of November, 1864, an assessment of one dollar per share was levied upon the capital stock of said Company, payable on the 22d day of November, 1864, in United States gold and silver coin, to the Secretary, or to Jas. V. Coffey, Virginia.

Any stock upon which said assessment shall remain unpaid on Saturday, the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 7th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. M. BUFFINGTON, Secretary.

Office, Nos. 8 & 10 Government House, corner Washington and Sansome Streets, San Francisco, Cal. nov26-22-4

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs, Wallace, Allen & Hardynge. Terms of subscription: One year, by mail, $10; six months, $5. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public.

W. H. TOBEY, Agent, Government House, San Francisco. 15-tf

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feel it our duty to warn such parties of this error, and herewith append that section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

By the above extract it will be clearly seen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

Mining and Scientific Press Patent Agency.

SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 30 March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first instalment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, which it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

TO MINE OWNERS.

REDUCTION AND SMELTING WORKS ON A SUFFICIENTLY large scale, where Ores of every kind can be thoroughly treated, so as to extract therefrom the precious metals, have long been wanted in California.

The Undersigned is desirous of erecting such works to meet the demand, provided sufficient encouragement can be obtained in regard to the quantity of work which may reasonably be looked for.

I have sufficiently proven, in my former smelting works, on Bryant Street, where I worked the richest of the Ophir ores to within Two and One-Half per cent. of the Assay, that I was acquainted with Metallurgy previous to my recent travels and experience in Europe, where I have built, during my sojourn there of nearly three years, many Reduction Works, thereby proving that I am capable of working ores by any and all known processes, whether by Smelting or Amalgamating, or other methods best adapted to the nature of the ore to be worked, and as close to the assay as can be done anywhere in Europe.

Mine owners wishing quantities worked as cheaply and effectively as can be done by sending it to Europe, will address the undersigned. Parties wishing to erect Quartz Mills, or other Reduction Works, can be furnished with Plans, Estimations, and other useful and necessary information as to the best mode of extracting the precious metals.

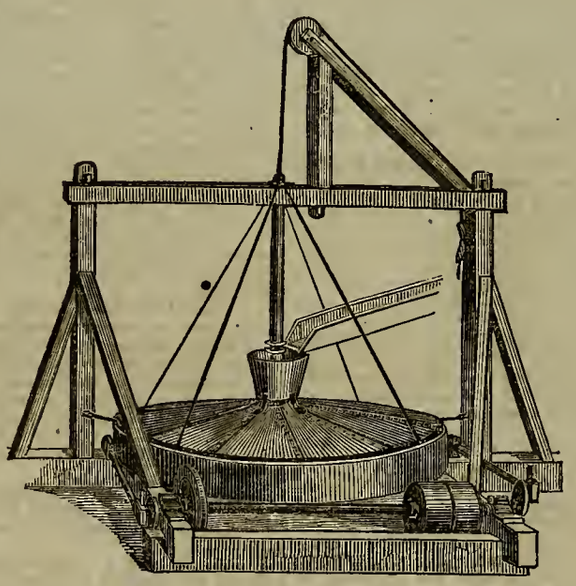
Its Assessed Value.—The value of the Mariposa estate, formerly Fremont's, is returned to the Assessor by the company now owning it at $427,000. The Assessor thinks it should be rated at $3,000,000.

Boston.—This city has a population of 281,220 persons, who are collectively worth over $900,000,000.

PRATER'S CONCENTRATOR.

We give annexed an illustration of Hungerford & Prater's Patent Concentrator and Amalgamator, a late invention of Mr. Prater, of Washoe. The machine, it will be seen, consists, first, of a shallow iron pan, hung from its center by an iron rod upon a frame. To the opposite sides of this pan are affixed two small cranks, by which a sort of circular shaking motion is given to the pan. The bottom of the pan rises gradually from the circumference to the center, at which point the discharge opening is placed. The sands are fed into the pan, direct from the stamps, through the hopper, which is seen near the center of the engraving, and pass down upon the inclined sheet iron surface, or distributor represented, dropping into the pan, evenly all around, at its circumference. The peculiar motion given to the pan as described above causes the heavier particles, such as sulphurets, gold, amalgam, etc., to remain near their place of deposit, while the lighter particles of sand, etc., work upward and inwards, towards the center discharge. The pully and rope seen in the above representation is designed for hoisting the distributor out of the way of the pan, so that the latter may be easily reached for cleaning up, etc.



This concentrator has been employed in different portions of the State, and wherever used has given the most complete satisfaction. Persons who visited the late Mechanics' Fair in this city, will readily recollect this concentrator which was exhibited at the Pavilion in in the department of mining machinery. We have before us certificates of recommendation from Kimball & Murphy, of the Metallurgical Works on Bryant Street, in this city, and Wheeler & Thayer, who are now using it at their mill in Sonora. Both of these firms speak in high terms of its performance as a concentrator of sulphurets and a gold saver. The machine is exceedingly simple in construction, not at all liable to get out of order, and can be furnished at a very small price.

AN INPORTANT QUESTION.

Eds. Scientific Press:—A friend, seeing a copy of your paper lying on my desk, asked: "What is the most advisable mode of extracting silver and also the best apparatus for so doing?" I suggested, firstly, a careful man, who firmly believes that a second or third working of tailings is a useless expense, and consequently one who seeks to avoid such a necessity. One thing must be plain, to cut off the surplus of the tailings, we must free the precious metal from chemical or mechanical bondage, (or both, as the case may be), which cannot usually be done by random experiments or trusting to luck; but, through the aid of careful analysis, by finding a substitute for the thief (be it sulphur, chlorine, iron or what,) that runs away, through our mills, with our wealth. A careful use of chemicals that we know are good; a total abstinence from chemicals that we *do not know* are good; (but which are setting the clock back continually), I suggested as good rules. Again, a good reverberatory furnace, well tended; a tight battery, with very fine screens and good pans, amalgamating in the strongest sense (depending on the battery for better grinding than they usually do) to be made capacious, kept hot, clean and not overcharged, and finally, an honest amalgamator and retorter. But our friend thought the suggestions, though good, were too general, and with his objections came a poser of a question. "Who has the best process and who the best pan?" Not wishing to take the responsibility of answering; I appeal to you. "What man and what pan does the best work, and does not depend entirely on the Gould & Curry mill for an endorser."

Respectfully yours,

P. S. D.

Folsom, Cal., Dec. 5th, 1864.

Our correspondent and his friend asks a very difficult question, as indeed the former intimates. We had hoped that at the late Mechanics' Exhibition, in this city, some plan would have been devised by which a general competitive trial would have been had between the pans on exhibition there; but, so far as we are advised, none was made, although there was an attempt in that direction. Such a trial might, perhaps, have enabled us to answer so much of the above query as refers to which is the best pan. As it stands, however, each pan has its especial favorites. All the pans which were on exhibition are doubtless good, some excelling in one particular, others in another. Probably more depends upon the manipulation and management of the amalgamators, than upon the difference in the actual working and saving capacities of the various machines.

As to the "processes," no one process can be made applicable to all kinds of ores. The requisite most needed is a knowledge of the ores. Ores from the same mine, even, are constantly changing in their character; and a much greater diversity is found in ores taken from different mines. An intimate knowledge of the entire metallurgy of all the associated metals is absolutely necessary to close working in a quartz mill. How many of our mill superintendents could stand the test of an examination in that particular? There is no part of the world where mining, in all its departments, is carried on more successfully than at Freiberg, in Germany, and this success is the direct result of strictly scientific mining, as all the mines there are worked entirely on the results of scientific investigation, conducted by the professors of the celebrated mining school at that place.

Mining, thus far, on the Pacific Coast, has been merely a series of experiments, without any system, instead of what it should be, the result of purely scientific investigation. These experiments having been conducted without any concert of action, the public, of course, have not been able to form any correct conclusion with regard to the comparative advantages of the different modes pursued or the different processes employed. Hence the utter impossibility of any correct answer to the above inquiries.

An Elegant Engine.—Our attention was called, yesterday, to a beautiful little steam engine, which has just been completed at the Golden State Foundry, for the Lake Manufacturing Company—an incorporation now working a quicksilver mine in Napa county. This engine has an 8-inch cylinder, with a 16-inch stroke. It is extremely neat, simple and compact in its construction; the fitting parts, and, indeed, all the workmanship, is without fault. It is fitted with Duabar's Patent Piston Rings. The governor is set directly upon the top of the steam-chest, and communicates its influences directly to the valve-stem, without the loss of motion inseparable from joints and levers. The engine will be shipped to its point of destination to-day.

New Mining Pump.—While at the Golden State we noticed several sections of a new mining pump which the proprietors of that foundry are now constructing for the Gould & Curry Mining Company. The castings, for smoothness, were equal to anything we have ever seen turned out in this city. The bore of this pump is 12 inches, and its length will be upwards of 400 feet. The entire pump, with all its connections and mountings, or bob-irons, are being constructed at this establishment. The work is being pushed ahead with a commendable degree of dispatch, and the whole will be shipped to Virginia City the present week.

THE VARNEY-WHEELER PATENT CASE DECISION.

The following opinion, delivered by Judge Hoffman, in the United States Circuit Court, in the celebrated patent case, will be read with interest by every one who is interested in the subject of patent rights and the invention and manufacture of mining machinery:

In the Circuit Court of the U. S., Northern District of California.

OPINION.

Thomas Varney vs. Zenas Wheeler, et als.

This is an action for the infringement of a patent issued to the plaintiff on the 16th of December, 1862, for an "Improvement in Amalgamators for gold and silver." The machine alleged to be an infringement has also been patented—the patent being dated December 8th, 1863. The defendants deny the alleged infringements, and the novelty and originality of the plaintiff's invention. They have also given notice, under the statute, of various other defenses hereafter to be noticed.

Models of the two machines were exhibited in Court, and a large number of witnesses called to explain their construction and mode of operation. It is apparent that the patented machine of the defendant closely resembles, if it be not substantially identical with, the improved and modified machine now manufactured by the plaintiff. But the inquiry is not whether Wheeler's machine resembles that lately used by Varney, but whether the former is substantially the same as the machine described in Varney's patent. That Varney has, in many important particulars, modified the machine as described in his patent, is obvious. Indeed, his late machines resemble much more nearly in external appearance and in their mode of operation, the Wheeler patented machine, than they do a machine constructed according to the drawings and specifications of his patent.

Whether or not Varney's late machines infringe Wheeler's patent is unnecessary to consider. Our only course is to ascertain how far the Wheeler machine is an infringement of the rights acquired by Varney under his patent.

The invention of Varney is declared in his patent to consist "in the employment or use of a rotary and stationary muller placed within a suitable pan or tub, provided with a cover and arranged in such a manner that when the device is in operation the ore will pass in a current or stream outward from the center, and between the mullers to the circumference of the same, and thence inward over the upper and rotating muller to the center of the same, and down through said muller between it and the stationary one, to be again thrown to the periphery of the mullers, thereby causing all the particles of the ore to be brought in contact with the quicksilver in the pan or tub, or with the amalgamated plates to be attached to the muller or mullers."

"This invention also consists in the employment or use of curved or spiral scrapers placed within the pan or tub, and arranged relatively with the upper surface of the rotating muller in such a manner as to insure the passage or movement of all heavy substances in the pulp, thereby preventing the same from lodging on the rotary-muller."

The machine by which the desired results were attained consisted of a pan or tub formed of two parts of about equal dimensions, provided at their contiguous edges with flanges to admit of their being bolted together. Between these edges packing was to be introduced to prevent leakage.

The under muller was stationary and provided with radial slots—on this the upper muller rotated, and it was also provided with slots drawn tangentially to a small circle at its center. At the center of the upper muller were openings by which the pulp after passing out from between the grinding surfaces at the circumference, was admitted again between the mullers and a circulation was thus established which could be continued until the operation was completed.

"To prevent heavy substances which may be contained in the pulp from resting or lodging on the surface of the upper muller, and to insure their passage along with the current," curved or spiral plates were employed "to serve as scrapers." These scrapers extended from a ring in the center of the muller to its periphery, and were secured at the end by vertical rods passing through the cover of the pan and extending down a suitable distance within it.

It is evident, not only from the specifications in the patent, but from the account given by the plaintiff of the progress of his invention, that his claim to a patent was founded on—

First—The employment of a rotating muller with central openings, and arranged within a pan, in connection with a stationary muller, so as to insure a current or circulation of the pulp.

Second—A covered or close pan consisting of two parts, as described in his specifications.

Third—The curved plates, or scrapers, arranged to operate in connection with the rotary muller.

The invention of a muller, provided with slots or recesses and copper plates, is expressly disclaimed by the plaintiff in his specifications. This is admitted not to be new, nor is it pretended that there is any novelty in the arrangement of a muller rotating upon a stationary bed-plate, and placed in a tub or pan. The principal feature of the machine devised by the plaintiff, and that which constituted, as he claimed, its novelty, was evidently the arrangement by which a current or circulation was established, and the pulp caused to pass continuously and repeatedly between the mullers, until the whole was thoroughly pulverized. This object be attained—

First—By confining the pulp in a pan, the cover of which was securely bolted, and the contiguous edges packed to prevent leakage.

Second—By making openings at the center of the upper muller to permit the pulp to pass down between the grinding surfaces.

Third—By using curved scrapers to prevent the lodging of the heavier particles on the surface of the upper muller, and to insure their passage along with the current.

It appears, however, that the idea of working ores in a batch, by causing them to pass repeatedly between mullers, the upper one of which is provided with openings at the centre, is by no means novel.

J. E. Clayton testifies, that so long ago as 1845, he arranged a machine in Tallahoosa, Alabama, for the reduction of gold ores, which embodied substantially the same principle. The mill described by him was composed of two stones, the one stationary and the other rotating upon it. The latter had a hole in the center, of some 10 inches in diameter, and the shaft, which communicated the motion, was attached by cross heads, leaving a large space for the passage of the pulp. This machine was at first worked by feeding in the ore at the center and discharging it in a continuous stream at the circumference after passing once between the grinding surfaces. As the operation, thus conducted, proved unsatisfactory, the witness was employed to examine and remodel the machine. He saw that the only mode of ensuring a successful result was to work the ore in a batch—that is, to retain it in the tub and cause it to pass repeatedly between the mullers until all was ground. This he accordingly did, and the experiment proved successful.

In Overman's Metallurgy, p. 267, a similar arrangement is described:

"This apparatus may be considerably improved by modifying some parts of it. If we make the runner in one piece and provide it with a large central space and arrange it in fact as a common grist-mill, with the exception that the driving shaft does not pass through the bed stone, and, in addition, drive the mill with considerable velocity, the fluid, water and mineral, assumes a concave form on its surface. It is driven higher at the periphery of the mill than near its center, and the solid matter as well as the fluid circulates from the periphery to the center above the runner, and from the center to the periphery below the runner. The mill thus modified grinds rapidly and is useful for a variety of purposes as we shall see hereafter."

It is evident that the author is here describing an existing and well known machine, the usefulness of which had already been ascertained.

It is also apparent that the result aimed at, is the same in this machine as in that of the plaintiff, and that the means adopted to accomplish it are substantially similar. In both machines the pulverization of the ore is effected by means of a bed-plate upon which a muller rotates, with central openings to permit the pulp to pass continuously and repeatedly between the grinding surfaces until the operation is completed.

If, then, the patent of the plaintiff is to be supported, it must be by reason either of the novelty of other parts of his machine by which its effectiveness is aided or insured, or else, if no part of the machine be new, because the whole, taken together, constitutes a new combination, and in effect, a new machine.

In Moody *vs.* Fiske, 2 Mass. 112–117, Judge Story says:

"Where the patent goes for the whole of a machine as a new invention, and the machine is in its structure substantially new, any person who pirates a part of the machine, substantially new in its structure, deprives the inventor so far of his exclusive right in his invention, and may in a great measure destroy the value of the patent. When the patent is for several improvements in an existing machine, or for an improved machine incorporating several distinct improvements which are clearly specified, then if a person pirates one of these improvements he violates the exclusive right of the patentee, for the patent is as broad as the invention, and the invention covers all the improvements; and it is a wrong done to the patentee to deprive him of his exclusive right in any of his improvements. Where the patent is for a NEW COMBINATION of existing machinery or machines, and does not specify or claim any improvement or invention except the combination, unless that combination be substantially violated, the patentee is not entitled to any remedy, although parts of the machine are used by another, because the patent by its terms stands on the combination only. In such a case, proof that the machines or any part of their structure existed before, forms no objection to the patent unless the COMBINATION has existed before, for the reason that the invention is limited to the combination. And yet if the combination be not wholly new, but up to a certain point has existed before, and the patentee claims the whole combination as new instead of his own improvements only, as by taking out a patent for the whole machine, instead of his own improvements only, doubtless his patent is void for it exceeds his invention.

"But if there be different and distinct improvements constituting parts of the combination, which are specified as such in the patent and specification, and any one of them be pirated, the same rule seems to apply as in other cases, where part of an invention is pirated, for the patent then shows that the patent is not limited to the mere combination, but includes the particular improvements specified.

"It is often a serious difficulty, from the obscure language of the specification, to ascertain what is the nature and extent of the invention claimed by the patentee. Whether his patent be valid or not, must materially depend upon the accuracy and distinctness with which his invention is stated. But in all cases where the patentee claims anything as his own invention in his specification, courts of law cannot reject the claim; and if included in the patent and found not to be new, the patent is void, however small and unimportant such asserted invention may be."

This leads me to the just points made at the bar, as to which it appears to me clear, both upon principle and authority that where a patentee in his specification states and sums up the particulars of his invention, and his patent covers them, he is confined to such summary, and he cannot afterwards be permitted to sustain his patent by showing that some part of it which he claims in his summing up as his invention, though not in fact his invention, is of slight value or importance in his patent. His patent covers it, and if it be not new, the patent must be void. Here the plaintiff claims a particular position of machinery as his invention, and it clearly appears in evidence that the position is not new. It has existed before, not in machines exactly like the present, but in machines applied to analagous purposes, viz: in machines applied for the same purpose as the plaintiff applies them. Without doubt he supposed he was the inventor, but that was his mistake, and will not help the case. The objection therefore, is fatal.

The rigor of the Common Law rule which avoided a patent whenever any part of a supposed invention proved not to be new, has since been relaxed by statute. By the act of 1837 it is provided that the patent shall be held good and valid for so much of the invention or discovery as shall be truly and *bona fide* the inventor's own, provided it shall be a material and substantial part of the thing patented, notwithstanding he may, through mistake, have claimed to be the inventor of some other material part of the thing patented, which in fact, was not his own.

By a subsequent proviso of this section it is enacted, that no person shall be entitled to the benefits of its provision who shall have unreasonably neglected or delayed to enter at the Patent Office a disclaimer of any right to such parts of the invention as have, by inadvertence, etc., been claimed as new. Whether the delay has been unreasonable under all the circumstances, is a question for the Court.

It does not appear with certainty at what time the plaintiff discovered that the arrangement of mullers in a tub to produce a circulation of the pulp was not new. His counsel even contend that the evidence of Clayton, and the description in Overmann's Metallurgy, do not impeach the novelty of the plaintiff's invention.

His patent was issued December 15, 1862. The present suit was commenced ——.

It is very possible that the plaintiff heard, for the first time, at the trial of this cause, of the machine used by Clayton, and of the description of a substantially similar machine in the public work that has been produced. Under the circumstances I do not feel warranted in pronouncing his delay in making a disclaimer unreasonable.

Assuming, then, that there has been no such unreasonable delay, I proceed to apply the principles and rules above laid down, by Judge Story, to this case.

What, then, is the invention for which the plaintiff has obtained a patent? It is, evidently, not for a mere combination of existing machinery or machines. A patent for a mere combination does not claim or specify any invention or improvement, except the combination. In such case it is, as we have seen, no objection that the parts be old, provided the combination be new.

In this case the patent clearly is for several distinct improvements in an existing machine, or, rather, for an improved machine incorporating several distinct improvements.

The invention of the plaintiff, as described in his patent, is "an improvement in amalgamators for gold and silver." The evidence discloses that the plaintiff had previously obtained a patent for a machine designed to effect the same object, and the patent now under consideration was for an improvement and modification of that machine. In his specification he describes his invention as consisting of the employment or use of the mullers in a covered tub, and so arranged as to produce the current or circulation of the pulp from the center to the periphery, and from the periphery to the center. It also consists in the employment of scrapers, arranged so as to insure the passage or movement with the current of all heavy substances in the pulp.

In the summary at the end of the specification the same improvements are specifically claimed as the invention of the plaintiff. They are declared to be:

1. The rotary muller provided with central openings, connected with a stationary muller, and arranged in a covered tub, so as to insure a circulation of the pulp.

2. The covered tub, composed of two parts and connected together as described.

3. The curved scrapers, to operate in connection with the rotary muller.

All these improvements, combined together, constitute the improved machine, or "improvement," for which the patent issued. But even if this patent could be considered as for a combination, it is evidently not for a "mere combination of existing machinery or machines."

The specification of the different and distinct improvements constituting parts of the combination shows that the patent is not limited to the mere combination, but includes the improvements specified. It would, therefore, protect the patentee against the pirating of any one of them, though the entire combination as such might not be pirated. (Moody *vs.* Fiske, 2 Mass., p. 118.)

If, then, the defendants have used any one of the improvements invented by the plaintiff, they are, under the Act of 1837, liable, provided the thing used be a material and substantial part of the thing patented, and be definitely distinguishable from the other parts claimed without right. And this, notwithstanding that the patentee was not the first inventor of another material and substantial part of the thing invented.

The case, as thus stated, is most strongly against the defendants. For if the invention be considered as a mere combination of previously existing machines, it is, I think, clear that there has been no infringement.

To constitute an infringement of a combination, it is not necessary that every one of the parts should be used; but the combination must be "substantially violated," and it would be a question for the jury whether the combination patented and that used were not substantially the same thing. (Sellers *vs.* Dickinson, 6 Eng. L. and Eq. R. 544, per Pollock, Ch. Bar.)

In the defendants' machine, the pan in two parts, provided with flanges, packing, etc., to which the plaintiff in his patent attaches much importance, is not used, but a deep pan is substituted with a wooden cover.

The arrangement of the slots or shoes on the muller is different. The upper muller is provided with spiral ridges, arranged to operate with similar ridges reversely inclined on the inner surface of the pan, to raise the pulp and and promote the circulation. The upper muller is attached to the shaft by an universal joint, and by a mechanism quite dissimilar to that described by the plaintiff. And for the scrapers are substituted broad guide plates, extending and secured to the edge of the pan, and capable of being elevated or depressed by means of a mechanism not found in the plaintiff's machines.

Assuming then—as in the point of view in which we are considering it we must—that each of the several parts of the plaintiff's machine is old, and not separately patentable, it seems clear to me that if the patent for the machine can be sustained, as for a new combination, which I think doubtful, the combination of the defendant is at least as novel as that of the plaintiff.

Dismissing, then, the idea that a patent for a combination has been infringed, we procced to inquire whether there has been an infringement of the plaintiff's right to any material and substantial part of the thing patented, which is definitely distinguishable from the other parts claimed, without right. We have already seen that the muller rotating upon a bed plate, with central openings, and arranged in a pan, so as to create a circulation of the the pulp, is not a new invention. The tub composed of two parts, with flanges, packing, etc., is not claimed to have been used by the defendants. In fact it is now discarded by the plaintiff, and a deep pan, with muller attached by a universal joint, has been adopted by him in his later machines. The infringement, if any, must therefore consist in the use, by the defendant, of the scrapers described in the plaintiff's patent.

The inquiry thus arises—are the curved plates described in Wheeler's patent substantially the same in their structure and operation as the scrapers of the Varney patent, and if so, do the latter constitute "a material and substantial part of the things patented by Varney, definably distinguishable from the other parts." To determine this question, a brief description of Wheeler's machine is necessary.

The rotation of the upper muller in a pan containing a charge of pulp, necessarily communicates a revolving motion to the mass. If the velocity be considerable the centrifugal force will cause the pulp, and especially the heavier portions, to accumulate at the periphery of the pan, and the surface of the pulp will assume a concave form. If the motion be continued, and the pan be high and without a door, the accumulation at the circumference will continue until the force of gravity overcomes the centrifugal force, and a portion of the pulp, consisting of the lighter and more fluid parts, will fall down and be carried to-

wards the center. The circulation thus obtained will evidently he imperfect. To counteract this rotation of the pulp, or rather to deflect the current towards the center. Wheeler introduced curved plates, extending from a frame at the center of the pan to its circumference. This frame is supported on the upper end of the shaft in such a manner that the plates will follow any adjustment of the muller, and bear the same relation to it, whether in its highest or lowest working position. The outer ends of the plates are supported by slides cast upon the inner surface of the pan. The effect of these plates is stated by Wheeler in his specifications to be, "to counteract the centrifugal force generated by the rotation of the muller, and to cause the pulp to pass toward the center of the muller, and down through the central opening, to be again forced outward between the muller and the bed plate."

The scrapers of Varney are curved or spiral plates extending from a ring, which encompasses the tube in the center of the muller to the periphery. At the outer ends they are supported by vertical rods extending down from the upper part or cover of the pan. He describes them as "arranged relatively with the upper surface of the muller in such a manner as to insure the passage or movement of all heavy substances in the pulp, thereby preventing the same from lodging on the upper surface of the muller in such a manner as to insure the passage or movement of all heavy substances in the pulp, thereby preventing the same from lodging on the rotary muller." Their use he states as follows: "The curved or spiral plates 'I' serve as scrapers, and prevent heavy substances from resting or lodging on the upper surface of the muller, insuring the passage of the former along with the current."

In the Wheeler pan four plates are used, while Varney employs only two scrapers. The form or curve given to these plates in both machines is similar, though not identical; but in their structure, arrangement and the use for which they are intended, there is as an essential difference. The scrapers of Varney are represented as of inconsiderable width and extending from a ring at the center to the periphery of the muller. They rest apparently upon the surface of the muller, and no means of elevating or depressing them are mentioned in the specifications or exhibited in the drawings.

The plates of Wheeler are of considerable width, and attached to a frame suspended from the top of the shaft, resting upon a vertical screw, by means of which the frame and plates attached to it may be elevated or depressed. The plates extend to the inner surface of a pan, where they are secured by slides. The office of these plates, as described in Wheeler's patent, has already been mentioned. It appears to me that the scrapers of Varney neither serve, nor were intended to serve, any such purpose, and this for the following reasons—

1. These are called by him scrapers—a name which indicates their use and operation. They are evidently but a modification of previous devices used for the same purpose in the Knox and other pans.

2. The accumulation, or piling up in a ridge at the periphery of the pan, of the rotating mass of pulp, was evidently intended in the Varney pan to be prevented by the use of the cover, or rather by making the pan to consist of two parts, with flanges, packing, &c. This arrangement, to which, on his specifications, he lays much stress, appears to have been considered by him as effectually securing the current or circulation he desired. On this hypothesis alone can we account for his declaration that the scrapers were of no use, "merely put in to please his customers," and that "the pulp would go to the center anyhow." That he did not consider them of very great importance, may also be inferred from the fact that in an advertisement, illustrated by wood cuts of his machine, in the spring of 1862, the scrapers are neither mentioned nor exhibited. As the patterns are exhibited in the drawings, it might not, as he has observed, have been practicable to represent the scrapers in position. But if, as he claims, he had then altered the original design by causing the rods which supported the ends of the scrapers to project above the cover of the pan and to be provided with nuts by which to elevate or depress them, there is no reason why this arrangement might not have been represented in the drawings.

3. The specifications of Varney's patent distinctly declare that the curved plates "serve as scrapers, and prevent heavy substances contained in the pulp from lodging on the surface of the muller, thus securing their passage along with the current."

The use of the device is here distinctly stated. There is no intimation that the scrapers were designed to counteract the rotary motion of the pulp, or to deflect towards the center the current running around the inner surface of the pan.

4. The inconsiderable width of the scrapers, and the absence of any arrangement for raising them above the surface of the muller, on which they rest, further corroborates this view.

5. The fact that the Varney scrapers only extend to the periphery of the muller, and not, like Wheeler's plates, to the side of the pan, constitutes not only an important difference between the two devices, but it indicates very clearly the use for which they were intended. It is obvious that the centrifugal force generated by the motion of rotation would drive the heavier particles to the circumference and cause them to revolve as closely as possible to the inner surface of the pans. To permit the pulp to ascend it is also plain that there must be some difference in the diameters of the muller and the pan.

If then the scrapers were designed to deflect the current towards the center, they would almost entirely fail in the useful effect if they extended, as in Varney's, only to the periphery of the muller. The portion of the pulp between the edges of the muller and the side of the pan would continue to revolve, and it would necessarily be composed of the heavier and coarser particles which would most require re-grinding. Varney, himself, admits that unless the plates extend to the side of the pan, they would be useless.

For these reasons, I am of the opinion that the curved plates of Wheeler differ from the scrapers of Varney in their form, their arrangement, their object, and effect, and that therefore their use is not an infringement of Varney's patent.

Whether assuming that Varney's device for working ores in a batch, by means of a bed-plate on which rotates a muller provided with central openings, the whole arranged in a suitable pan, is not patentable because old, the scrapers alone can be deemed to constitute "a material and substantial part of the thing patented, definitely distinguishable from the other parts," so that the patent may be sustained *pro tanto*, it is not necessary to consider.

Much testimony was taken to show that in fact Wheeler's invention was prior to that of Varney's, and that the latter derived his ideas from the former.

It is claimed by Varney that his invention was, in its essential features, matured and perfected in August, 1861. But this statement seems hardly consistent with his declarations or his conduct.

Varney's application for his first patent was not made until the end of October, 1861. That machine has since been discarded as useless.

If then, at the time of this application he had already matured and perfected the invention of another and far better machine, he committed a practical fraud upon the public in withholding from them the benefit of his skill and ingenuity. It is certainly strange that he should have gone to the trouble and expense of procuring a patent for his first machine, and delayed, for nearly a year, his application for a patent for the improved machine which he had, as he says, already invented.

It may well be doubted whether, if it be true as Varney states, that at the time of his application for his first patent he had already completed and perfected his improved machine the suppression would not be fatal to both. It appears in evidence, that so early as December, 1861, Wheeler had conceived and communicated to Stewart & Kirkpatrick, at Washoe, the idea of his machine. He explained to them the mode in which the circulation, or over and under current was to be produced, and the guide boards by which it was to be assisted.

In January, 1862, drawings of this machine were received at the Miners' Foundry, and Stewart, the partner of Churchill, was desirous of having his pans constructed on that plan. The theory and construction of the proposed pan were fully explained to Varney, who succeeded, however, by affecting to consider Wheeler's pan "a humbug," in dissuading the parties from adopting it, and in inducing them to order pans made on the model of his own patent. These were subsequently discarded as useless. We are thus driven to adopt one of two suppositions: either that Varney willfully deceived Stewart in inducing him to order an inferior and worthless pan; or else that he had not at that time discovered the mode of producing the over and under current, recognized its utility and invented a machine to effect it.

Wheeler commenced manufacturing his machines in January, 1862. He commenced using them in June of the same year. They were constructed at the Miners' Foundry by the defendants to this cause under the immediate observation of Varney. But in his conversation with Scott in July, 1862, and in his communication with the defendants he does not appear to have once intimated that he was the first inventor of the Wheeler machine, and that in constructing the latter, they were violating his rights. Up to the end of 1862, he continued to have his own pans built at the same foundry, and if he really considered the construction of Wheeler's pans to be an infringement of his own invention, his silence is inexplicable. His delay in applying for his second patent is equally unaccountable. In August, 1861, he had, as he says, completed and perfected his invention of his improved machine, and yet, in October of that year he applies for a patent for his first and imperfect invention, and delays his application for a patent for his improved and perfected machine until the end of June, 1862, more than a month after Wheeler had taken the preliminary steps to obtain his patent.

It is unnecessary, however, to pursue this inquiry further for in the view I have taken of this case the question of priority of invention is immaterial.

The other ground of defence remains to be noticed.

It appears in evidence that some months before applying for his second patent, Varney entered into an arrangement with the defendants (except Wheeler,) who were the proprietors of the Miners' Foundry, for the construction and bringing into use of his pan. By this agreement the defendants were to manufacture the pans, on orders to be obtained by themselves or by the plaintiff, and on every pan made by them and sold, either by themselves or Varney, the latter was to receive a certain sum, varying with the size of the pan. No limitation as to the number of pans to be made by defendants was imposed; the objects of all parties being to bring them into use as rapidly and as extensively as possible. Under this agreement a large number of pans was manufactured by the defendants, the tariff on which was duly paid to the plaintiff. It is contended that these circumstances constitute under the provisions of the 7th Sec. of the Act of 1839, a defence to this action, even though it be admitted that the Wheeler pan is an infringement of the Varney patent. That section provides "that every person or corporation who has or shall have purchased or constructed any newly invented machine, manufacture, or composition of matter, prior to the application by the inventor or discoverer for a patent, shall be held to possess the right to use and, vend to others to be used, the specific machine manufactured, or composition of matter so made or purchased, without liability therefor to the inventor, or any other person interested in such invention; and no patent shall be held to be invalid by reason of such purchase, sale or use prior to the application, except on proof of abandonment of such invention, or that such purchase, sale or prior use has been for more than two years prior to such application for a patent."

Whether the public and general use of the invention by all persons who were willing to purchase his machine, which was permitted and procured by the plaintiff, does not amount to an abandonment of his rights, and to avoid the patent subsequently applied for and obtained, is a point not necessary now to determine. It is sufficient if the permission to use affords a good defense to the defendants in this action.

It might admit of doubt upon this language of the statute whether the invention of a method of manufacture, a process, or an art, or anything but a machine, manufacture, or a composition of matter, is within the scope of the provision, or whether the purchaser or licensee could do anything more than use or vend to others to be used, the specific thing which he had purchased. But the Supreme Court have construed the terms "newly invented machine" manufacture "or composition of matter," to mean "*the invention patented*;" and the words "the specific machine" to refer to *the thing as originally invented*, of which the right is subsequently secured by a patent. McClug vs Kingsland, How. R. 202, 209. Curtis on Patents, § 309.

If then this statute be construed to mean that the person purchasing or constructing and using, with the consent of the inventor, the thing invented, shall possess the right to continue to use, not merely the machine or physical object purchased, but the invention or thing patented, whether it be a machine, or an art for process or method of manufacture, it follows that the defendants to this suit are not liable.

For the statute, while it mitigates the previous laws under which a patentee was deprived of his right to the patent, if he had allowed, before applying for it, a public or free individual use of his invention, nevertheless treats the patent as avoided so far as any liability is concerned on the part of those persons who have been allowed such prior use.

If it be said that to allow these defendants to continue to use and vend the plaintiff's invention is a great hardship upon him, the answer is two-fold.

1. This procuring and permitting his invention to be made and publicly sold extensively for the joint benefit of himself and the defendants before applying for a patent, was an evasion of, if not a fraud upon the law; for it extended by so much the time during which his monopoly is to continue, and postponed to the same extent the period when the public would enter upon the free use of the invention.

2. If, by the terms of the contract, the defendants were bound to pay the plaintiff a certain sum for each of his machines manufactured and sold by them, the remedy, if any, is by an action on the contract. They cannot be liable, under the act of 1839, for an infringement.

If this view of the effect of that statute be correct, it affords a defence to Wheeler as well as the other defendants. It is not pretended that he has used any machines not manufactured by them, or that he has infringed the plaintiff's rights, otherwise than by receiving from the other defendants the sum agreed to be paid by them on the sale of his machines.

I find, therefore, for the defendants.

[Written for the Mining and Scientific Press.]

Inventors and the Case of Varney vs. Wheeler.

EDITORS MINING AND SCIENTIFIC PRESS:—The judgment in the case of Varney *vs.* Wheeler *et als.* concludes with a paragraph which the Judge qualifies by the admission of a doubt "if this view of the effect of the statute be correct"—the unlimited grant of an undivided portion of all the rights acquired under a patent strikes so materially at the value of patents—is of so much importance to inventors, and is so little in accordance with the true interests of the public, that I may be allowed to call attention to other judgments of United States Courts to show that the doubt above expressed by Judge Hoffman, whether well founded or not, need only require inventors who are developing their inventions to limit, by explicit terms, the interest they grant to any purchaser before applying for their patent referred to, as bearing on the question by the learned Judge, show, firstly, that a process or art is in the same category as a machine. To this it is unnecessary to take any exception; and it is true that the case of McClury *vs.* Kingsland decided that the section 7 of the Act of 1839 only applies to the "specific improvement then invented and used by the person who had purchased, constructed and used the machine to which the invention is applied." In that the purchaser does not acquire rights to other subsequent improvements; but that case also decided that "the person who had the use of an invention prior to the application of a patent therefore, is on the same footing as if he had a *special license*." In the case of Washburn *vs.* Gould, Story J., decided that "a mere license, strictly speaking, passes no interest." This important difference is clear when we note the distinction marked out in the case of Armstrong *vs.* Hallenbeck. There it was held that "the agreement conveyed no interest in the patent right, but that the grant amounted to a mere license, with a limitation or condition as to its continuance"—*i. e.* from the terms of the agreement. Again, in the case of Rich *vs.* Hotchkiss, Williams C. J., held that the taking of a temporary license to use a patent right cannot be considered as an acknowledgment of a right in the license. I therefore submit that there is no such unqualified grant passed to a purchaser—before the application by the patentee for letters patent—as cannot be limited by the terms of agreement of sale, which operates as the "special license" caveat vendor. The interests of the public would certainly be compromised by anything which destroys the inventor's freedom of action in perfecting his work before making patent its details.

ONE CALLED.

A NEW DODGE OF UNION SHARPSHOOTERS.—The Richmond *Examiner*, of October 7th, pays the following tribute to the skill of our Yankee sharpshooters:—"Conceive a line of battle beyond a breastwork, each man squatted completely out of sight, firing over his shoulder, while, instead of exposing his head and hands to the advancing Confederates, he looks away from the enemy, and narrowly examines the stock of his own gun. Two little mirrors, scientifically placed at the proper angle, and attached to the stock, enable the soldier to see the sight on his barrel, and all that comes within range, without exposing any part of his precious person."

NEW PETROLEUM COMPANY.—The Adams Petroleum Oil Company filed their certificate of incorporation in the office of the Clerk of the County Court on Monday last. Their object is to work mines of petroleum and petroleum oil, situated in the southwest quarter of section fifteen, town one, North, range one, East, of the meridian of Monte Diablo. The capital stock of the company is $300,000, which is divided into two hundred shares of $1,500 each. The Trustees are Phillip Wolf, S. B. Whipple and James T. Cruiksbank.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, Dec. 10, 1864.

With this number the Stock Circular enters upon the second year of its existence. During the past year we have endeavored to present a faithful record of the market, and aimed to impartially set forth, from time to time, so far as it were possible, the actual condition of all mines commonly dealt in at the Board, and the same policy will be adhered to in the future.

A decision of considerable importance to stock brokers and stock operators has just been made in the New York courts. An action was brought to recover damages for the wrongful selling by defendants of 200 shares of Quicksilver Mining Co.'s stock, belonging to the plaintiff. It appears that on the 31st of March last, the plaintiff directed the defendants to purchase for him the above mentioned stock, half at buyer's option of 10 days and the balance at 30 days, with a margin of 30 per cent. The purchase was made at $89 and $89½, and shortly afterward a panic occurred, and the stock declined very rapidly. On the 19th of April, the defendants telegraphed to the plaintiff at Philadelphia to send them $5,000. The telegram was received about 7 o'clock P. M., and the next day he remitted $2,200. In the meantime, however, the defendants sold the stock at $60 and $61, and on afterwards tendering the full value of the stock and demanding its delivery to him, the defendants refused to furnish it. Afterward, the stock rallied and sold at $85. The judge charged the jury that the defendants had no right to sell without notifying the plaintiff of the time and place of sale, and that he was entitled to recover, by way of damages, the difference between the price the defendants sold at and the highest market price at which the stock has since been sold. The jury found a verdict for the plaintiff for $5,685.38.

Since Saturday last, the severity of the weather throughout the interior has continued to interrupt communication, and in Nevada temporarily retarded active operations in a number of claims. Vigorous efforts are now being made to overcome these difficulties, and a large force has been employed to place the roads leading from some of the leading mines in a better condition.

The stock market has been somewhat depressed, and lower prices have ruled. The aggregate sales exceeded, however, those of last week. An apprehension is felt by some that the state of the roads to the different mills will materially diminish the receipts of bullion for the current month from a number of prominent mines; but the latest Washoe advices would seem to dispel these fears in some degree, at least.

Legal Tender Notes have been active, and were sold to the extent of $111,000, within a range of 46c, seller 30, to 48¼@48½c, steamer day, closing at 48c bid, 48½c asked. The latest telegraphic advices from the East quote gold at 231 on the 6th inst.

Bonds and city stocks have been inactive, but for the most part were firmly held. California State Bonds are in request at 77, and San Francisco 6's at 63. California Steam Navigation Co. is inquired for at 75 ℔ cent.; San Francisco Gas Co. at $75 per share; Spring Valley Water Works at 63 ℔ cent.; and San Francisco City Water Works was sold at 48 ℔ cent.

Savage is in rather less favor and 11 feet were sold, declining from $1,800 buyer 30 to $1,680, buyer 30 ex-dividend, and closing at about $1,625. Intelligence from this mine continues to be of a favorable character, and it is said that but two days were lost in hauling ores to the various mills employed by the company. After the payment of the last dividend of $75 per share, a considerable surplus remained on hand.

Gould & Curry fell from $1,550, dividend on, to $1,450, ex-dividend of $75 per foot, rose to $1,500, buyer 30, and $1,475 cash, receded to $1,420, seller 30, and was sold yesterday at $1,425. This company have accumulated a reserve of more than one months supply of ore at their mill, and so far during this month the receipts of bullion have exceeded those of any like period for some time past. We can learn of no material change in the mine. Since Saturday last 40 feet of stock have changed hands.

Chollar continues dull and inactive at $1,000 to $965, at which rates six feet were sold. A new Board of Trustees were chosen this week to serve for the ensuing year. A change was also made in the Presidency of the Company. The administration of the old Board as well as the executive ability of their former President, Mr. Hosmer, gave, it is said, entire satisfaction to the stockholders and the same efficiency in the direction of the company's affairs may now be anticipated. Receipts of bullion from the mine since the 1st instant amount to $37,000.

Yellow Jacket was dealt in to the extent of 15 feet at $850@$865, closing at about $850 bid, $900 asked. Sales are reported "between hoards" at $900.

Potosi is much lower and 26 feet was sold, declining from $700 to $580. The decision of Judge Mesick dissolving the injunction against the Bajazet company, upon an apparent technicality is said to be at variance with the ruling of other Judges in similar cases. The ore taken from the ground claimed by the Potosi has been replevied by the latter company. The injury done the hoisting apparatus of the Potosi by the recent cave will be repaired in a day or two.

Ophir is in less favor and 16 feet were sold receding from $430 to $390. Hale & Norcross declined from $410 to $210, and rallied yesterday morning to $325, buyer 30, ($50 assessment delinquent), and closed at $288, 74 feet in all changing hands. At the close sales were made at $285.

Uncle Sam rose from $150 to $200, fell to $140, and sold yesterday at $145. An assessment of $100 per share (upon the Nevada Incorporation) was levied on the 3d instant.

Overman was sold at $80. At a meeting of the stockholders held last week a committee was appointed to investigate the affairs of the company with authority to proceed to Virginia City, but so far as we can learn no progress has been made owing to the refusal of the Trustees in Nevada to allow an examination to be made.

Imperial continues depressed, and 246 shares were sold, within a range of $125@120, closing at about $122.

Bullion has been largely sold, at fluctuating rates, opening at $160, advancing to $170, falling to $158, rallying to $175, buyer 30, and closing at $162. Since Saturday last 380 shares were dealt in.

Burning Moscow is still a prominent feature of the market, and 4,105 shares have changed hands, steadily declining from $60 to $39.

Nevada (J. G.) is also in much less request, and 407 shares were sold, receding from $72, buyer 30, to $37½, and advancing to $45 and $48. Bajazet rose from $30 to $55, fell to $30, and sold yesterday morning at $36. Golden Age and Empire was sold at $12@13; De Soto at $5½@6; Daney at $20, and Buckeye at $6.

Sheba declined from $18 to $11; Wide West fell from $17 to $13; and Sierra Nevada from $40 to $33.

The aggregate sales of stocks and Legal Tender Notes since Saturday amount to $510,659.50.

Legal Tender Notes and Bonds, on par	½ per cent
Bills of Exchange, on net amount	½ per cent
Mint Certificates, on net amount	½ per cent
Specie, on net amount	½ per cent

Commissions on Mining Shares.

Sale at 1 dollar up to 10 dollars	$0 25 per foot
Sale at 10 dollars up to 25 dollars	50 per foot
Sale at 25 dollars up to 50 dollars	1 00 per foot
Sale at 50 dollars up to 100 dollars	1 50 per foot
Sale at 100 dollars up to 200 dollars	2 50 per foot
Sale at 200 dollars up to 400 dollars	5 00 per foot
Sale at 400 dollars up to 600 dollars	6 00 per foot
Sale at 600 dollars up to 800 dollars	7 50 per foot

From $800 to $3,000 per foot, one per cent, on the amount of purchase or sale.

Anything above $3,000 per foot, three-quarters of one per cent. on the amount of purchase or sale.

FRANK LAWTON, Secretary.

J. B. E. CAVALLIER, President.

Mechanical.

Sound Waves.—It has been often suggested that variations of sound in music, whether from the voice or any kind of instrument, are caused by the peculiar *form* of the sound waves or vibrations produced. A series of careful experiments was made a short time since, by an ingenious Frenchman, which fully proved this theory. The apparatus employed consisted of a tube flaring out widely at one end, like a trumpet, and closed at the smaller end by a very thin membrane, to the center of which was attached a lead pencil. This tube concentrated the sounds by means of its peculiar construction, receiving them at its wide mouth, and *writing them down upon paper*, by the vibrations of the membrane and the pencil attached at the smaller end—the paper being moved along before the pencil, at a uniform rate, by means of clock work. The figures on the paper varied, both in *form* and dimension, according to the *kind* of music produced. It was also demonstrated, that the more agreeable the music was to the ear, the more uniform and regular were the tracings made by the pencil. Shrill cries, harsh sounds and disagreeable, unmusical intonations produced very irregular and ungraceful lines upon the paper. The result of the experiments was very interesting, and the ingenuity displayed in producing an automatical instrument for registering sound, was highly creditable to the mechanical skill of the experimenter.

Water Tight Cisterns.—It is oftentimes desirable to so construct the walls of a cistern that they will prevent water, in moist places, from soaking through from the outside, as well as retaining the water upon the inside. The following method of construction is perhaps as cheap and reliable as any for such a purpose:—"Spread the bottom of the cistern with hydraulic cement, then lay upon the cement a layer of bricks, and commence the walls about one inch inside of the bottom layer of cement; build up the wall to the hight of four courses of brick, leaving a space of one inch between the outside of the same and the wall of earth excavation; fill up this space with gravel, or cement, made very thin and pound in. Then build up four courses more, and fill in again, until the wall is completed. Plaster inside with a coat of cement and you will never be troubled with either leaks or infiltration."

To Save Gas.—Many gas consumers still persist in regulating the flow of gas by the burner valves. Such a procedure is decidedly wasteful. The fact has been often repeated that the best way to regulate the flow of gas—and thereby economize it—is to the burners, is not by the burner valves, but by the main valve near the meter. When the gas jets are burning, this valve should be turned to regulate the flame to the proper length, with the burner valves freely open. The object of this is to reduce the total pressure in the pipe before the gas comes to the burners, so that some gas may not escape unconsumed, as is usually the case when the burner valve is used as the regulator.

Smoke Consuming on a Large Scale.—A distinguished English chemist, Prof. Spence, of Manchester, proposes to obviate the inconveniences of smoke, in London and other large cities, by disposing of it after the following manner:—His plan is to carry the smoke into a large central sewer under the street by proper conduits, and then have at some distance from the city, a Tower of Babel-like chimney, into which all the smoke should come. The idea is novel, but scarcely practicable.

A Large Pump.—The cylinder for the pump of the Gold Hill Drainage Company has arrived upon the company's ground. It is described as a monster piece of machinery—its length being fourteen and a half feet, its diameter about five feet, and its weight eight tons. It was caught by the storms of the last few days, and hauling it up the steep street of Gold Hill, according to the *News*, with the snow, mud and slush a foot in depth, was a heavy job. It took eight pair of large horses to drag it along.

FALSE PREMISES.

Editors Press:—I am frequently annoyed by seeing, in the columns of scientific journals, the most absurd rules in engineering, and accounts of wonderful machines which are represented as being capable of performing impossibilities. These accounts of the "wonderful machines" are generally so worded as to give the desired impression to the general reader, but avoid figures or fixed points, by which an engineer might be able to decide as to the truth or fallacy of the statement. By way of illustration I may refer to the account of the invention, by which one Chinaman was to do the work of two horses in running street cars; as also to the notice of the "Pendulum Machine," which, with a six horse-power steam engine, was to run a 24-stamp quartz mill.

Now, to neither of the above propositions could an engineer make any reply, for the reason that there is not a single fixed point or claim in either, which the writer might not explain to mean something different from the apparent meaning. But now we have something definite, and coming from a quarter worthy of notice: I refer to the report of the Committee of Awards on Water Wheels, Hydrostatic Engines, Pumps, &c., &c., chosen by the exhibitors of such machines at the Mechanics' Fair of San Francisco for 1864; said report being published in your paper of October 29th. In awarding a special premium to the Hansbrow & Redding Hydrostatic Engine, the committee say, that with this engine one horse-power is obtained from each inch of water (miners' measure), with a fall or pressure of 200 feet. Now that is simply an impossibility. As you are aware, the miners' measure of water, when used in calculations for machinery and horse-power, is now, like the horse-power, a definite standard of measure, equal in weight to 145 86-100 pounds per minute, or to 4,032 cubic inches of water per minute, or their equivalent in any other measure. Now a weight of 145 86-100 pounds per minute, exerted through a fall of 200 feet, is only equal to 29,172 pounds through a fall or hight of one foot, per minute, while a horse-power is equal to 33,000 pounds through a hight of one foot, per minute. So that if it be true that the engine gives one-horse power per inch of water (miners' measure) used with a head of 200 feet in hight, then the engine may be made to pump all of the water, that is used in working it, back into the reservoir from which it is supplied, thus making of it a veritable perpetual motion, or self-supplying machine, yielding over 13 per cent of clear gain in power; or, in other words, a 100 horse-power engine would be able to supply itself with water and afford 13 horse-power, free of cost, to be applied to the driving of machinery.

Such a report can only be an injury to parties interested in the invention, for engineers (who of course know it to be impossible) are likely to give it no further thought, but merely consider it another of the many humbugs offered to the public by crack-brained inventors—or rather would be inventors—while a worthy member of the great public, who takes everything he sees published in a "scientific" paper as a scientific truth, (which in fact it should be, if possible,) and who, though not an engineer, may be an excellent business man, with enterprise enough to try new inventions when properly recommended, may find himself "out and injured"—not because the invention is a humbug, but because he has been led into making a wrong calculation. For instance: the building of machinery that will require 100 horse-power to drive it, in a locality where it is impossible to obtain more water than will afford 95 horse-power. There his machinery is a loss—not because the machinery is not good of itself, nor for the reason that the engine is defective, nor because the water-power is not good as far as it goes of itself, but because the one is not proportioned with reference to the other. Or, again, he may erect his machinery on something like the following calculation:—Interest on cost of machinery, together with incidental and running expenses amount to one hundred dollars for a given time; receipts for the same time give one hundred and ten dollars; leaving a profit balance of ten dollars—a very good percentage. But suppose, on trial, he finds that the power to run his machinery costs him 13 per cent more that he calculated; will he not be very apt to use harsh expressions toward everybody and everything that led him into the blunder, and ever after give new inventions a wide berth, thereby doing all real improvements a very great injury?

And now, Messrs. Editors and Committee, I want it distinctly understood, that I am not disparaging the Hansbrow & Redding Hydrostatic Engine, but only your report of it; for I can myself testify that the engine is really a most perfect machine, both in design or invention, and in mechanical workmanship, and I believe it will give as high a percentage of the power applied as will the best steam engine; the only perceptible difference between them, in my opinion, being that the one is adapted for steam and the other for water power, each working on precisely the same principle, but being designed with reference to the peculiarities of the element from which it derives its motive power. So perfect, indeed, is the Hansbrow & Redding engine in its design and workmanship, that I would have no hesitation in saying that the effective horse-power of one of them, working with a head of water 200 feet high, would be fully equal to the effective horse power of a steam engine, of equal sized cylinder, and allowed to run at an equal speed, with a pressure of steam in the boilers of 86 pounds. Theoretically, one inch of water, miners' measure, with a fall in vacuum of 226¼ feet, would just equal one horse-power; consequently the engine or wheel that will give actually one horse-power per inch of water, with a fall of 230 feet, or even 250 feet, requires no further recommendation.

Wood Bending.

The use of bent wood, for an increasing variety of purposes, surpasses the knowledge even of those most familiar with its production. It is used in all departments of business and pursuits of life, wherever man and his products are known. It is as ancient as history, and is found among those in the rudest state of barbarism. Little is known of the most ancient devices for bending wood, but the oldest patented in England is now nearly a century old, and is used there yet for some purposes. The oldest in the United States was used first in 1794 up to 1821, then patented with but little change. In 1813, at the Woolwich Navy Yard, in England, floor timbers, sixteen inches square, for a man-of-war, were bent over an arc of a circle with a radius of four feet. All these devices, as well as almost all others subsequently used, restrained, in some degree, that tendency found in wood to elongate its outer curve when under the operation of bending, the same as is now claimed to be done in apparatus brought as near the state of perfection as the nature of wood and the change of position the particles undergo will admit. The organic structure of all woods of the endogenous or external growths, are similar, and possess the qualities of cohesiveness and compressibility, more or less, differing most in the degree or quantity of these two qualities, which make and determine the amount or degree of flexibility and elasticity in any wood. These qualities, with a structure that will admit any fluid agency to thoroughly penetrate and soften its particles, indicate a wood that may be made to assume any curvilinear shape required for practical use. Then only ordinary judgment and skill would be required to operate good wood-bending apparatus successfully, without any loss occuring from breakage of the wood under the operation of bending, but when the wood has not been seasoned or partially seasoned, a trifling loss will occur from breakage caused by the shrinkage that all woods are subject to in the process of seasoning. And in the case of unseasoned bent wood, this shrinkage acts upon the fiber of the outer curve, which is always at the point of tension, if not in an actual state of severe tension, for the reason that in deflecting any substance, but particularly wood, either with or without partial restraint, to oppose tension, the wood is acted upon by two forces, the one a crushing force that fore-shortens and upsets the lesser or inner curve, with a tendency to rupture it laterally, the other a tensile force that stretches and elongates the outer curve, with a tendency to fracture it transversely and lift the fiber, which is the most hurtful and oftener occurs to the product. These two forces are divided by a neutral line more or less removed from either curve in proportion to the amount of restraint employed to oppose the elongation of the outer curve, but when nearest the outer curve the best product is had, because all tension, however little, is injurious to the structure of the wood, arising from separating and drawing out the fiber which can never be made to unite again, as in ductile and malleable substances, and because the crushing or compressing force improves the wood by forcing the fiber into the interstices or cells, and by interlacing and interlocking the fiber, a product is had nearly resembling the knot or knurl, which is difficult to split or cut, even when rupture is indicated.

In order to get the best product of bent wood, the crushing force alone should be used, and it can be if the fiber of the wood be left free to move into the new position in more than one direction from the point of bending, by beginning the curve in the middle of it when the wood is made to assume a long curve first, before taking the shorter curve of the mold, which long curvature starts the fiber throughout the whole wood, and makes more, if not every particle of the wood, accessible to the influence of the softening agent already in it, and consequently more yielding to the action of the crushing force. This force should be produced and governed by fixed and immovable restraint that should not compress the wood while in its straight form; it should also prevent end expansion and preserve the exact length on the outer curve of the product as that of the wood in its straight condition. This would give a product uniform in density and rigidity throughout its whole curve, to resist any tendency to change the shape produced. The long curve gradually lessening to the curve of the mold, would amount to double on successive manipulation, and by successive manipulation wood has been pressed into one-third of its primary bulk, with every quality improved to resist decay and wear in use. Nothing can be reasonably urged in support of the popular belief of the necessity to produce or permit tension and elongation in successful wood bending.

Tension and elongation are required or permitted only in consequence of the use of imperfect apparatus—elongation is positively indispensable in machines that bend from one end, or in one direction from the point of bending, and that press the wood against the mold with such power as to prevent all movement of the fiber, producing in advance of the point of bending a wave-like movement among the fibers of the wood, held rigidly confined and straight, until suddenly made to take the curve of the mold. The movement in advance of the bending gradually accumulates a power that resists compression thus attempted, and before the completion of the process, and in order to save the machine or the product, relaxation of restraint is required, and is followed by elongation of the wood, however small it may be. Tension acts upon the fiber, giving a product uneven throughout its whole length, and more liable to change the artificial shape. It is obvious that any augmentation or diminution of restraint during the process, must give just such results, and that the machinery in use for wood bending is far from having reached perfection; there can and will be machinery constructed to bend large timbers for marine and other structures over any arc or curve that will not require a reduction of its bulk by the compression of the inner curve, to less than one-half its original bulk. All our past experience has shown wood-bending machinery to be most profitably employed in the production of smaller articles, for which there is an unlimited demand that will continue because of the suitableness and superiority of bent wood for these purposes.

A Cyanometer is an instrument recently invented by Saussure for determining the deepness of the tint of the atmosphere. It is a circular band of thick paper divided into fifty-one parts, each of which is painted with a different shade of blue, decreasing gradually from the deepest blue, formed by a mixture of black, to the lightest, formed by a mixture of white. The colored zone is held in the hand of the observer, who notices the particular tint which corresponds to the color of the sky. The number of this tint, reckoned from the lightest shade, marks the intensity at the time of observation.

The Screw Propeller.—Frederick Sauvage, a Frenchman, it is claimed, was the first to conceive the idea of employing the screw as an auxiliary of steam. He died, a few years since, at Havre, France. His fortune and health had been ruined by his labors in scientific discoveries, and his reason had left him in consequence of chagrin of different kinds.

Prof. Silliman, who has been analyzing the silver ores of Nevada, thinks that the yield of even the richest of the mines might easily be doubled by the use of more scientific knowledge and skill.

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventions can be secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For references, we shall furnish the names of numerous parties for whom we have obtained patents during the past year.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the Mining and Scientific Press, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

San Francisco:
Saturday Morning, Dec. 10, 1864.

QUARTZ REDUCTION WORKS.

We would call the attention of all persons, engaged in mining, to the advertisement in this issue of the Reduction and Metallurgical Works recently erected by Messrs. Fauchery & Genard, at the Railroad Foundry on Fremont street, near Market. At their works the quartz is first reduced to a degree of fineness suitable for the ordinary pan process, by passing it through the Crocodile Quartz Crusher. From this "Crusher" the sand is made to pass without handling, through a grinding apparatus, which is well conceived and most effective. The grinding surfaces consist of two iron disks working upon precisely the same principle as the ordinary French burr stones. These disks are kept in constant order, automatically, by the very peculiarity of their construction, the surface being made of alternate bands of cast and wrought iron. The latter wearing faster than the former, acts as a self-sharpener and keeps the surfaces constantly ridged by means of the regular work of the machine. It pulverizes either wet or dry, as the operator may desire.

From this grinder the slime passes into an amalgamator, also a new invention, which they have denominated an "Improved Freiburg Barrel," which has the faculty of being made to suit the character of the ores under treatment. Thus, when working rock containing free gold, it is constantly receiving and amalgamating the slime without intermission; while in silver ores it receives and retains the charge until it is thoroughly treated, when it is washed by a stream of water passing through the machine, leaving the amalgam and mercury separated and in a clean state. These results are all effected in an easy and simple manner. The slime, while being amalgamated in this barrel, receives a constant gyratory motion, from one end of the barrel to the other, by means of a series of screw shaped riffles or bars, which aid materially in securing for the mass a thorough mixing, and consequently a more rapid amalgamation of the contained metals.

One important feature of this system of barrel amalgamation is said to consist in the fact that there is no rubbing or grinding of the mercury, between iron, stone, or other surfaces, as occurs now with most if not all other machines in use, whereby great loss arises from "float mercury," as the miner calls it. This loss is said to be entirely obviated, as, it is claimed, has been shown by a great number of careful experiments.

These machines would appear to constitute a cheap and most effective quartz mill, in all its departments, which can be put up at a cost not exceeding $2,000, and of a capacity thought to be sufficient for the reduction of over half a ton of rock per hour. The machinery can all be run with a six horse-power engine, is simple, not liable to get out of order, and works with but very little noise. It does not occupy a space to exceed thirteen feet by six. Miners and others visiting the city will do well to call, and examine these works for themselves.—Messrs. Fauchery & Genard are prepared to construct and sell mills, and to reduce ores in a greater or less quantity, at their works on Fremont street.

Mr. Fauchery is also the inventor of the new turbine wheel known as "Fauchery's Turbine Water Wheel," of which five are now in operation in different parts of the State. This wheel will be recollected by visitors at the late Mechanics' Fair as the miniature model which was employed to drive a small quartz mill at the Pavilion.

A FEW WORDS WITH OUR READERS AND THE PUBLIC.

We are frequently consulted by persons—miners and others—with regard to the purchase of scientific books, treating upon mining, metallurgy, mechanics, etc. There is an evident desire on the part of our miners, generally, and many mechanics also, to acquire practical and reliable information with regard to their several occupations. The miner would like to post himself with regard to all facts pertaining to the location and working of mines; the mill-man wishes to understand all the various "processes" for handling the different kinds of ore which he is called upon to work at his mill; the mechanic is desirous of keeping himself posted in the improvements that are constantly being introduced into the various classes of machinery; and all inquiring minds are more or less interested in the great march of improvement which is now moving with such wonderful celerity throughout the whole civilized world, and introducing one revolution after another into all the various branches of productive industry. People are beginning to awake to the fact that there is no branch of industry in which they can thrive without thoroughly informing themselves with regard to all its bearings, and the improvements affecting it, which are constantly being introduced. Things are not now as they were fifty years ago, when an apprentice was expected to learn everything essential to his business in a few short years of apprenticeship; when the son never thought of moving out of the beaten track followed by his father; when he who made nails by hand never dreamed of a machine for making them; and so of almost every other pursuit, either in mining, mechanics, or agriculture.

Now, if a man does not keep himself thoroughly posted in the improvements of the day, he is behind the times, and his shop or mill, if he owns either, will soon be deserted for those where all the "modern improvements" may be found. Hence the increasing demand for books and periodicals devoted to practical information alluded to at the outset of this article. We are often puzzled to give advice in such cases. The fact is, the march of improvement is so rapid that books can't keep up with it. A work may be written upon chemistry by one of the best chemists of to-day, and almost before it is through the press the advances that have been made in that science in the meantime may have rendered it quite antiquated. So of metallurgy, and so of most of the various mechanical operations of the day. So patent has this truth become, that nearly every leading pursuit now has its special periodical devoted to its interests alone; and it is utterly impossible for any man to excel in his specialty without he is a constant reader and student of the journal devoted to his particular interest.

Books are now employed chiefly as texts from which to obtain general principles. They are next to worthless to the practical man, unless they are accompanied by parallel periodical publications, from which he may inform himself with regard to the progress which his co-workers are making in discovering new principles or improving such old ones as have a bearing upon his occupation.

But we commenced this as a *business* paragraph; and to make it practical and bring it to a point, we would suggest to the reader, who must fully agree with all we have thus far said, that the particular object and aim of the Mining and Scientific Press is to render itself valuable and acceptable to the public as a medium of information which shall be generally useful and practical to all classes. We would assure the miner, whether in the mill or mine, that we shall allow nothing to transpire without transferring it to our columns, and, when necessary or advisable, informing our readers promptly where they can obtain more full particulars than we can readily give. We would say the same, also, to the mechanic. It is to these two classes, particularly, that we devote this journal as a specialty. We do not believe that any miner or mechanic can be found, who has read our paper carefully for the past two years, but who will freely acknowledge that the practical information we have imparted in these columns during that time could not be obtained by ten times the two years subscription price expended in the most choice selection of books which could be purchased. Any person who can read these columns without gaining a large amount of valuable information is certainly more fortunate than the writer, for he has learned much—very much—during the past two years from the thoughts and investigations of his associates and contributors, who have aided him in supplying material for these pages, to say nothing of what he has gathered from his exchanges, the gist of which he has carefully extracted and compiled for the benefit of the readers of this publication. We have, time and again, been assured by individual patrons that a single paper has been worth more to them than the entire year's subscription.

Reader, are you a miner or mechanic? Do you take the Press? If so, all right; if not, you are a greater loser than the publishers of this paper can be by the lack of your subscription. Of this truth you may assure yourself by inquiring of any one who has read the paper carefully for one or two years past; hence, if you are wise, you will no longer delay sending in the amount of six months' or a year's subscription. We are also prepared to furnish back numbers of the paper, bound or unbound, since January last. They will be found better worth their cost by far than any other book or periodical obtainable.

The Potosi-Bajazet Decision.—This important and interesting mining case has at length been decided. The matter decided was an application for an injunction, on the part of the Potosi, for prohibiting the further taking out of ore from certain grounds in dispute, by the Bajazet and Golden Era Company. Both these companies own valuable mines—the Potosi on what is supposed to be the main Comstock lode, and the Bajazet on what is supposed to be a side vein or spur, and taken up at a later date than that of the Potosi. In a similar case between the Gould & Curry and the North Potosi, a decision was recently rendered that the side vein is a spur, and must belong to the owner of the main lode, and a like judgment was expected in this case, which was heard before Judge Mesick as Referee. He has filed his report, refusing the injunction; and deciding the case on a point that was not made by the defendant. The main question, in the opinion of the lawyers, who spent about a week in the argument, was whether surface veins alongside of the Comstock lode are independent veins or mere spurs. But Judge Mesick says that it is unnecessary to go beyond the fact that the Potosi Company, which sues as a corporation, proves that it was incorporated in 1861, and claims its mine under a deed to the Company made in the previous year, when no such company existed. The Potosi Company, therefore, has no title sufficient to serve as a basis for ejectment or injunction. The case is beset with many complex and perplexing questions of law and equity.

A Coal Company.—The Dwamish Coal Mining Company has recently been incorporated in this city. Its object is to develop certain coal mines of the Dwamish River and Lake, Washington Territory. Capital stock, $300,000. Trustees, Frank Roule, C. P. Wolcott, Douglass Gunn, Joseph Healy and L. M. Mauzer.

Progress of the Pacific Railroad.

The Auburn *Stars and Stripes*, of November 23d, thus speaks of the progress on the Central Pacific Railroad:

Feeling, in common with the people of Placer county, a deep interest in the speedy construction of the great Pacific railway, we, with a view to post ourselves as to its progress, took occasion a day or two since to ride along the line of that portion of the road between Newcastle to Auburn, the grading of which has been in progress for several months past—much of the work is deep cutting through rock and heavy fills across deep ravines. We confess that we have hitherto felt some impatience in regard to what we deemed a want of energy in the prosecution of the work from Newcastle to Auburn. But after looking at the many long, deep and narrow cuts through rock, in which but few men could find room to work, we are satisfied that the time consumed in making such cuts could not have been materially shortened by any means. Most of the heavy work between Auburn and Newcastle is now done, or approaching completion, and we see no reason to doubt that our quiet town will in a very short space of time be enlivened by the music of the locomotive whistle, and the hearts of our people made glad by the return of business and prosperity to their wonted and proper place.

While operations are thus progressing on the California end of the road that portion immediately west of Missouri is also being pushed forward with a most commendable degree of energy. From Omaha, in Nebraska, opposite Council Bluffs, on the Missouri river, to the Elkhorn, a distance of eighteen miles, the work of grading has been vigorously prosecuted during the past eight months, and will be continued with unabated zeal through the winter. This section of the route will probably be ready for the rails some time during the coming summer, and then along the Valley of the Platte, for a distance of five hundred miles the track will be laid with a rapidity unexampled in the construction of railroads. At no point in that long distance west of the Elkhorn, will a cut or a fill over five feet be required. Not more than a dozen curves will be necessary, and the average grade will be less than five feet to the mile—the maximum not exceeding six. Fifteen miles of this level section have already been graded west of the Elkhorn, and by the use of patent excavators, three miles per week are being completed, or were during the fall. By the first of November next, it is expected the cars will be running between Omaha and Loup Fork, eighty-five miles from the Missouri river.

While the Eastern portion of this great work is being pushed forward with such a commendable degree of energy, it is to be regretted that so much apathy and contention exists with regard to its western terminus and construction. Cannot a little more spirit and harmony be infused into the enterprise in California? The people of Nevada have a deep interest in the matter, and so has every Californian who is interested in any kind of business over the mountains. Let us cease our bickerings and join in a united effort to put through, in the shortest possible period of time, this greatest and most important work of internal improvement ever attempted.

Petroleum in Nevada.—The Humboldt *Register* thinks that that section of Nevada is destined to become one of the greatest petroleum producing regions in the world. There is a large region of country that seems to be completely saturated with petroleum; the liquid streams spontaneously flow through the surface, and rises wherever a hole is dug, and coal gas rises everywhere. There are also a large number of springs, from which the natural crude oil flows in abundance, and one discharges more than a barrel a day.

Reducing Wages.—There has been some excitement at Howland Flat, Sierra county, lately, on account of a reduction of the wages of hands at work in the mining claims, from three dollars and a half to three dollars per day.

All the Boston dailies have raised their prices. It is said that there is but one penny daily now published in the country, the Philadelphia *Ledger*.

HOME FINANCES.

We have to note another dull week in financial and mercantile circles. At this season of the year business is always light and the wants of the trade restricted, but just now the inactivity prevailing is peculiarly marked, owing mainly to the condition of the roads throughout the interior. Intercourse with Sacramento, Stockton and Marysville, from some portions of the country has been seriously interrupted for more than a week past, and to many localities it has been found difficult to transport merchandise. Remittances of treasure hence have also been retarded and the regular annual settlements usually made at about this time will doubtless not be forthcoming with as much promptitude as in former years. As we have frequently remarked, however, credit during the summer and fall has been more restricted than usual and the indebtedness of the country dealer cannot be of sufficient magnitude to create any embarrassment to merchants here even in the event of an entire absence of aid in this direction for sixty days hence.

Receipts of Treasure from the country since Saturday last will amount to $1,500,000, including about $700,000 from Portland and Victoria. Bullion is likely to be plentiful for Monday's steamer, and gold bars are now offered at 830@840. Silver is ranging as formerly at ½ ₱ cent. premium to 2 ₱ cent. discount. The market for bills and telegraphic transfers on the East, has not yet been defined; but rates will not probably vary materially from those ruling on last steamer day.

Legal Tender Notes have been active and steady this week, at about 48@48½c. Gold was quoted in New York on the 6th instant at 231.

EASTERN FINANCES.

We are in possession of Eastern advices, per mail, to the 14th of November. The political crisis having passed over peacefully, there were evidences of a general improvement in financial and business circles, and the merchandise markets had been exceedingly buoyant. The rapid fluctuations in gold, however, prevented any special activity, and the volume of business transacted was somewhat restricted. It was thought that after the result of the Presidential contest had been fully digested, and the mercantile classes had made up their minds as to what must be the commercial effects growing out of it, the current of gold would be more steady, the markets more settled, and dealers and consumers of merchandize would supply themselves with more freedom with whatever their circumstances might require.

The money market at the close of the second week in November was more stringent, owing, in part, to the drafts of the Treasury Department on the National Banks throughout the North, and the consequent extreme caution of private capitalists, who were calling in their loans and husbanding their resources. But, notwithstanding this, we may remark, in general terms, that a better feeling was apparent, with an upward tendency, in all staple articles. The current quotations for money at New York were as follows:

	Per cent. per annum.
Loans on call, Stock securities	7 @ —
Do bond and mortgage	7 @ —
Prime endorsed bills, 60@90 days	7½@ 9
Do do 4@6 months	8 @ 9
First-class single signatures	9 @ 10
Other good bills	10 @ 12

Government securities had been sold freely, and the market was ruling firmer for all descriptions. The 5-20's seemed to be the favorite bond, and had been largely dealt in. The closing rates of the various securities were as follows:

U. S. 5-20 Sixes, Registered	100¾@ 101
U. S. 5-20 Sixes, Coupons	101¾@ 101¾
U. S. 6's of 1881, Coupons	107¾@ 108
U. S. 6's of 1881, Registered	107½@ 108
U. S. 5's of 1865 (Loan payable in gold)	200 @ —
U. S. 5's of 1871 and 1874	100 @ 163
U. S. Debt Certificates 12 mo., Int. in currency	95½@ 95¾
Seven-Thirty Treasury Note Bonds (old)	108 @ 108½
U. S. 5-₱ cent. Legal Tenders	102 @ —
American Gold	244 @ —
Silver	233 @ 236

CALIFOINIA RAISINS.—A parcel of California Bunch Raisins, put up by M. R. Miller of Pleasant Valley, has been recently placed in the market, in this city. They are selling at the rate of $4 per box, or $2 for a half box, weighing 12½ lbs.

SIERRA COUNTY.—We learn from Mr. M. A. Singleton, one of the proprietors, that the Hope company, located on the Plumbago ledge, half a mile east of Minnesota, after working two years, and running a tunnel 260 feet long, all the way through blasting rock, have recently struck their ledge at a depth of 130 feet from the surface. The ledge averages two feet in width and looks exceedingly promising. The company will immediately proceed to thoroughly develop their claim. They will probably build a mill next season.

THE ant is said by naturalists to produce 86,400 eggs day, which continuing for a lunar month, gives the astonishing sum of 2,419,200. This being about one egg in two seconds, very little time is consumed in cackling.

Mining Summary.

CALIFORNIA.

NEVADA COUNTY.—It is said that there is now more business in the town of Grass Valley, more mining going on, more men at work, more money in circulation, than at any time since the opening up of its immense gold hills.

The *Union* says that the Houston Hill claim is proving exceedingly rich. Since July last it has yielded its owners, Messrs. Trenberth, Smith, Northey & Co., the very handsome sum of $50,000.

The Empire Company, on Ophir Hill, recently struck their ledge at a depth of 500 feet from the surface, and took out the first pay rock, which looks exceedingly rich. The company have a splendid mill on the ground, and the rock is taken to the battery for crushing as it comes up.

Two men, while recently out on a shooting expedition up the creek, a short distance from town, accidentally discovered a very rich ledge, about six inches in width, from which Dr. Easley, one of the discoverers, procured some very rich specimens, worth about $75. The fortunate owners have put men to work sinking a shaft, and we may expect to hear of something very rich from Chapparal Hill, the name of the locality the ledge is located in.

In Nevada, much complaint is made on account of the lack of mills, which is a serious drawback to both the working of old ledges and the development of new ones. The old Gold Tunnel lead, one of the earliest quartz locations in the State, and formerly very rich, but which has latterly not paid anything, has recently passed into the hands of Capt. Kidd, who has again struck it rich.

The old Whigham claim, on Mud Flat, near Nevada, is again coming into notice and value. For some time past it has been in possession of Wicks & Co., who worked it under a lease from its owners, a wealthy firm at San Francisco. This lease is just about expired; when it does, the proprietors will work it themselves. For this purpose they intend erecting a new mill and other machinery, and will sink the incline and shaft considerably deeper.

The *Transcript* learns that the claims of John Hickey, at Moore's Flat, are paying from $3,000 to $8,000 at every week's clean up. This claim is one of the best in Nevada county, and has been paying big dividends for several years, and the prospect is it will take a good many years to work it out.

SAN JOAQUIN COUNTY.—The sloop Angel Dolly sailed from Stockton, on the 3d instant, with 300 sacks of Keystone copper ore. By the sloop Banner, 648 sacks of ore from the same mine were shipped at the same place. The steamer Helen Hensley brought down 609 sacks of copper ore on the 2d instant.

TUOLUMNE.—A nugget of gold, about as large as a man's fist, was recently found at Santiago, about a mile east of Columbia, by a Mexican. He was hunting over a pile of "headings," thrown out of some miner's tom several years ago, and "struck it big." The piece was sold for $486.

Men working the Daley claim, in Columbia, washed up lately, and obtained $753 worth of gold. This was the yield of 110 carloads of dirt, or five days' run.

EL DORADO.—The Placerville *News* of the 27th ult., says:—"We were recently shown some very rich blue cement from the Deep Channel, Hoyt, Brewster & Co.'s claim, Smith Flat. The pieces were literally studded with coarse gold. Brewster says there is plenty more of the same sort. Wherever this blue lead has been struck it has paid well, and particularly about Smith's Flat.

PLACER.—The Folsom *Telegraph* says the mines in that vicinity are doing better than for years past. On Anderson's Flat, old claims are being again worked, and numerous new ones are being opened, and promise to pay well. There is any quantity of mining ground that requires nothing but the exercise of a little elbow grease to turn out the golden ore. The old excuse of numbers of men—the want of water—is played out; for the Natoma Ditch Company water can be had at any point, and in any quantity required. Large quantities of gold dust are purchased weekly by the dealers in that article, in Folsom.

SHASTA.—The Excelsior Company, at Whiskytown, says the *Courier*, are vigorously pushing their tunnel, and with good success and flattering prospects. Eighty feet more will bring them under their shaft, and, consequently, they are liable to strike their lode any day.

The *Courier* further adds that Mr. Henry Jones is having a large quantity of rock hauled from Lower Springs to the Spring creek mill, to be crushed. High hopes of the richness of this rock are entertained by the owners of the lode, and we hope their most sanguine expectations may be realized.

In close proximity to the Spring creek mill another gold bearing lode has recently been discovered. The discoverers are quite san-

guine of its being a good thing. The mill company are getting some very fine prospects much better than they had anticipated.

Amador.—The Oriental Copper Mining Company advertise to let a contract to sink their shaft fifty feet deeper. It is now one hundred and fifty feet deep.

It is stated in the *Ledger* that the Butte Ditch Company contemplate purchasing the Jackson water works. If they succeed in getting hold of that property they will at once erect a suitable reservoir on the hill somewhere in Shober's field, and supply it from their ditch.

Mariposa.—There are in Mariposa county ten steam quartz mills, which are worth $300,000. They have 220 stamps, and crush, an average of 250 tons of rock per day, the average yield of which is $15 per ton. From these statistics, gathered from the County Assessor's report, it appears that the Mariposa quartz mills produce daily $3,800 worth of gold—or about $1,250,000 per annum.

WASHOE.

The recent storm appears to have been very severe in Washoe as well as throughout California. Several of the large companies, with ore houses full of rock have been compelled to suspend operations for the present, in consequence of the inability of moving the same over the roads to the various mills. A still larger number of small companies are in the same fix.

The gold which is taken out of the newly discovered gold placer at Dayton is said to be very fine, so fine, in fact, that it is found exceedingly difficult to save it.

The late strike in the Caledonia Tunnel is said to be a very promising one. The ledge is said to be ten feet in thickness and very rich. A selected sample assayed $2,956 in silver, and $929 in gold.

Como is said to be decidedly looking up. The favorable opinion expressed by Professor Silliman and the working of the Whitman rock at the Sacramento mill, has had a tendency to attract the attention of experienced mill men to the mines in that district, (Palmyra). It is stated that a party of practical operators are trying to make arrangements with the mill company to run the Como mill for a lengthy period. Should they succeed, it will doubtless do much towards establishing the permanency of the mines there.

The New York mill Company, which owns two mills in Washoe Valley—the Manhattan and Washoe—are still driving ahead. The former, located in Allen Cañon, is now crushing forty tons per day, and its capacity will soon be increased to eighty. The latter, located in the town of Washoe, is now in complete working order, and is only waiting for the injunction to be raised from the mine from which it is to receive their ore for crushing. This is the same company which is putting up such extensive works at Reese River, and which we have noticed from time to time. We trust that the enterprise and energy of this company will be fully rewarded.

The Belcher mining company, at a recent meeting of stockholders made choice of Mr. F. A. Tritle for President; M. Buckman, Secretary; and Mr. John Lambert, Superintendent. These gentlemen are spoken of as a most excellent selection for officers, and the opinion is expressed that the choice will insure a continuance of the successful management which has heretofore characterized the operations of the Belcher Company. The company is now taking out about fifty tons of good ore per day, and expect soon to be able to greatly increase the amount. The mine has just been cleared of the great influx of water which, some two months since flooded the works to the depth of eighty feet. The last dividend of the company was declared in August; if no more trouble with water occurs, another dividend will be declared about New Year's, after which the company expect to declare regular monthly dividends. There would most probably have been no intermission in dividends had it not been for the occurrence of such accidents as it was impossible to foresee or guard against.

REESE RIVER.

Several new and important discoveries have been reported in the columns of the *Reveille* since our last, and among them that of a mine containing a large amount of arsenic, whether in the form of an arseniuret of silver or of iron we are not informed. The *Reveille* says the vein is located about ten miles north of Austin in the Toiyaba range. The lead is about three feet wide and will pay, at the surface, $250 to the ton. The ore is very heavy, and somewhat resembles tin ore. An experienced miner, however, would at once see the difference, although he would be puzzled to tell what it was. By slightly heating it, it can be told by its disagreeable odor. If mined at present it would be necessary to ship the ore, as there are no means that we are aware of to beneficinte it in this country.

The "New Star" is the name of a claim just located on Lauder Hill by Broadhead and Benedict. Some of the surface rock assayed $294 74 per ton. It is a well defined ledge and promises to pay largely. It is the intention of the owners to have the work prosecuted with vigor and the claim fully developed by spring.

The Butte mill, which has been idle for some time in consequence of some disagreement among the proprietors, will soon be started up again, under the management of Mr. Richard T. Hill. The mill will be fitted up with all the latest improvements and will add greatly to the development of the mines in San Francisco Cañon, where it is located.

The Oregon mill and mine has been placed in complete order for a winter run. The company is now taking out rich paying rock from both claims—enough to keep the mill employed without intermission, while the miners are sinking the main incline to a still greater depth to find out what is yet hidden below.

The Washington ledge, is located at the highest elevation of any mine around Austin, and a short distance to the east of the Oregon. Work is being prosecuted with vigor under the direction of Frederick A. Miller, Superintendent. They have the main incline down one hundred and forty feet, besides many drifts. The ledge is two feet wide, from which they are obtaining large quantities of excellent paying ore, and are now having some of it worked at the Pioneer Mill. Preparations have been made to keep up the work continuously through the winter.

A discovery was made on the 22d ult., by Messrs. Keon & Thompson, on Austin Hill, which bids fair to rank among the best of that rich locality. The workmen have sunk to the depth of about seven feet, at which point the vein is eighteen inches solid quartz, and clear of all extraneous matter. The owners intend having it developed at once.

New Discovery.—Messrs. Jones & Arnold are the fortunate discoverers of a rich lode to which they have given their own names. The locality is about one fourth of a mile south of the Whitlach, and the ore is very similar and fully as rich as that of that celebrated vein. Mr. Arnold is one of the discoverers of Eureka District, and is a very energetic and lucky prospector.

The Diana, at a depth of 117 feet, have struck very rich ore, and are taking out first-class rock in large quantities. It is said that the rock will yield $1,000 to the ton.

New Battery.—The frame work of the new ten stamp battery now building at the California mill, is completed and five stamps put in operation. The others will be put in as soon as the battery box, which is now on the way, arrives. All the machinery about this mill has been thoroughly renovated and repaired. The mill will soon be prepared to do double the amount of work it ever did before.

Completed.—The new roasting furnace for Johnson & Co.'s horse quartz mill, near the Third Ward district school house, has been completed. The drying kiln and chimney will be erected immediately.

The Midas Mill.—The Masonry and carpenter's work on this mill, so far as the outer walls are concerned, is completed and the building is inclosed. The masons are now at work setting the boilers, two in number, and building the roasting furnaces. Extraordinary pains is being taken with the furnaces and they will undoubtedly be equal to any ever erected in any country. The chimney is sixty feet high and will be carried still higher. The work is now being done as rapidly as possible, as the owners desire to have it in working order as soon as possible. This will be the largest, most substantial and complete mill in every respect in the county, and for convenience and durability is not excelled by any in the State.

Important Sale.—Mr. Eugene I. Fuller, through his agent in New York, has sold the claims known as Stony point and Live Yankee for the snug sum of $25,000. These claims are located near the Midas mill in Telegraph Cañon, and bear the reputation of being first-class lodes.

HUMBOLDT.

We clip and condense the following from the Humboldt *Register*:—

The Sheba Strike.—We were led into making a mis-statement, last week, concerning this mine. A gentleman from Star, whom we now know was himself deceived gave us the information which we announced—the striking of a heavy ledge of the finest ore. The men are still at work in the old lode, taking out a great deal of excellent ore; but there has been an new vein struck. The mine is looking excellently well; but nothing new in it.

Prospect.—This is the name of a new discovery in Trinity District. We understand that Webber, of the Evening Star mill, offers to bet any amount that no ore as pure can be taken in as large quantities from any mine in the State as can be got from the Prospect.

One from the Gem is now on the way to Full's mill for working.

The Atlas Company has the Inskip ledge again solid, and about a foot width. Looks favorable for a permanent ledge.

A One-horse Mill.—Melarky has one, in Dun Glen. The first one in this county. The stamps are made of the axle-trees of a Government wagon. The mill has run a few trips, but Melarky has not made anything; for he promised to let us know as soon as he did.

The Silver Wedge.—No work is doing on this ledge, but the locators claim to have taken out such ore as give assurance of its future richness, and say that work will be resumed early in the Spring.

Whitmore.—This mine is next south adjoining the De Soto on the Sheba belt, Star District. It has always shown as favorably for mineral as any portion of the Sheba belt, but owing to the absence of Col. O'Connor, one of the largest owners in the mine, the company has withheld operations until it could be seen whether he was willing or not to join with it in working the mine. The Colonel visited the Star, and being well pleased with the conduct of the company so far, and satisfied that they are working for the true interests of all the owners therein, has joined the incorporation, and the work will now go ahead. The Colonel controls perhaps as much capital as any man in the State, and our Star friends have reason to congratulate themselves that he is turning his attention to Humboldt. A contract to run the tunnel in the Whitmore claim was taken by Leyson & Co. Work will commence at once.

The De Soto Company shipped on the 24th ult. 360 lbs. bullion—the result from 40 tuns ore. The Sheba mill is still crushing De Soto ore.

Owing to the reduction of wages at the Sheba, most of the employes quit. Work will be resumed, however, in a few days.

ESMERALDA.

The *Union* states that there is a probability that another large sale of mining ground in Bodie has been effected in New York. That paper has been informed that John S. Maybugh and other gentlemen, owners of mining claims in Bodie district, recently received a dispatch from New York, asking the terms upon which they would sell their interests. The dispatch was answered immediately, and probably ere this a sale has been made.

Golden Age and Empire.—Notwithstanding the low figure at which the stock of this company is now selling, the Esmeralda *Union* says the mine never before looked so promising. The mine is now in good working order, and will prove more remunerative to the owners than many of them suppose. The last crushing was unsatisfactory, owing, we believe, to a defect in the machinery of the mill. Most of the gold seems to have been lost. Work will soon be resumed in the lower shaft, at the bottom of which the rock looks very promising. A large number of specimens have recently been taken from the lead.

New Mining District.—A new and promising mining district has lately been discovered about sixty miles east of Aurora. A party has gone thither with a view to making their fortunes there.

Montgomery.—The miners at Montgomery are still making important discoveries. New leads are being found almost daily, and the miners are becoming more sanguine of success as the character of the mines becomes better known. Notwithstanding the lateness of the season and the severity of the weather, the population of the district is rapidly increasing. Work is progressing upon Muncton's Smelting Furnace, and the proprietors seem to have confidence in its success. Most of the ore is different from that of other districts and may require different treatment. Fears are entertained that unless the furnace is skillfully managed, it will be a failure. Many of the miners are about to procure hand quartz mills, being confident that with these they will be enabled to replenish their almost exhausted purses. In a few months these mills will be numerous at Montgomery.

Important discoveries have recently been made by the Antelope Mining Company, in its eastern shaft, at a depth of 245 feet. It promises better than any rock we have seen in the camp, and we trust it will continue to widen, deepen and grow richer. The Antelope deserves success.

Hanscom's Patent Quartz Crusher.—This machine is now at work for the Spring Valley Water Works, crushing rock for making concrete for the company's new reservoir at Lake Honda. Sixteen thousand tons of rock will be required for this work. Only one of these machines is in operation at the present time, which crushes 160 tons per day. Additional shafting is being put up for starting another, when the amount of work will be doubled. Mr. Hanscom is also getting up his crusher in miniature size, just right for hand-work. He has now a machine at the Golden State Foundry, which will not weigh over 150 pounds, with which a man may crush from 250 to 300 pounds of rock per day. Such a machine, we should think, would be far preferable to the "hand mills," now so extensively used at Reese River, and which are also being successfully introduced into other places.

Heavy Casting.—A pillow block, weighing six tons, for an oscillating engine, for the new steamer Del Norte, which is being built for Ben. Holladay's line, was cast at the Pacific Foundry yesterday afternoon. This foundry is building a 10-stamp quartz mill for the South Boise, New York and Idaho Mining Company. The mill was ordered by telegraph, and is now nearly completed, and will be ready for shipment in a few days. The Bryan iron battery and Varney's pan will be furnished. Quite a number of quartz mills have already been shipped to the Northern mines, and it is expected that the demand next Spring will be greatly increased.

An Important Decision.—We have devoted a large space in our columns to-day to the decision in the great pan controversy between Wheeler and Varney. Aside from the interest and importance which it may have to the parties in direct controversy, it also contains much of value to inventors generally, in relation to the working of the patent law. A correspondent, in another column, makes special allusion to one point brought up in the decision, and a perusal of the document will develop several others of interest and importance to all persons holding patents, or who may contemplate application for the same. We would recommend its careful perusal by every reader of the Press.

To Correspondents.—We have received a well written and critical description of the "Rivot Process," by one correspondent, and some general remarks on the "Ryerson and Rivot Processes" by another, both of which will appear next week; also a communication from "T. McA.," exposing the inaccuracies of a "Rule for making Cone Pulleys," as published in a late number of the *Scientific American*, which will appear in our next issue.

To Mining Secretaries.

We positively refuse hereafter to receive advertisements of any mining company for the payment of which the Secretary is unwilling to vouch. We shall also exercise the right to eject from our columns, at any time during the course of publication, any advertisement for which payment is not made, or security given upon proper notification.

DEWEY & CO.,
Publishers Mining and Scientific Press.

Mining and Scientific Press.—This well conducted journal has entered upon its ninth volume. It is a sterling periodical, and deserves encouragement.—*Territorial Enterprise*

DISCOVERY OF A REMARKABLE CAVE IN THE VICINITY OF FORT RUBY.—We extract the following from the Reese River *Reveille* of November 27th :—

From Lieutenant Tolls, who is now in this city, we learn that a remarkable cave has just been discovered in the mountains ten miles north of Fort Ruby. He had heard, about two months since, that there was a large quantity of water issuing from the mountains in that vicinity, and determined, if possible, to learn from whence it came. In company with several brother officers from the Fort, he started out on a tour of inspection. On the side of the mountain they discovered a hole two feet wide and three and a half high, from which a sufficient quantity of water came to run a good-sized overshot wheel. Near by, and a short distance higher up, were two other holes. They procured a skiff, and by turning on its edge managed to get it into one of the upper holes and work it down into the channel of water below. They then got in the boat, and commenced exploring this strange lake and cave. The water was twenty feet in width and six in depth where they started in, with high walls of limestone on either side; but as the party proceeded on their singular journey it increased in size and grandeur, and having an ample supply of candles, which were lighted, it presented a magnificent sight. The water increased to a depth of twenty feet and to one hundred in width, and was as clear as crystal. The bottom could be easily discerned with the light of a single candle. Numerous sand bars were seen in different places, the sand being fine and dark. The ceiling, or arch, is nearly fifty feet high, except in one place, where it comes down so near the water that they had to stoop in order to get past it in the boat. They went in about half a mile, and found no indications of coming to a stopping-place. They could find no bottom at that point. It is the intention of the Lieutenant to explore it further on his return. The atmosphere in the cave was mild and pleasant, and a candle burns brilliantly. This may eventually prove to be as celebrated as the Mammoth Cave in Kentucky, and have its hundreds and thousands of admiring and curious visitors.

PROFITS OF THE SHEBA MINE.—The impression seems to have become pretty general that the late heavy assessment of the Sheba Mining Company has been laid without any proper cause—in short, that it is a little game of "freeze-out." The following paragraph, which we clip from the Reese River *Reveille*, would seem to give color to this idea. The *Reveille* says: "The cost of extracting and reducing the ores of the Sheba amounts to $60 per ton. This includes every expense, general and incidental. The ore worked at the company's mill pays, on an average, $160 per ton, or a profit of $100 per ton. The mill has ten stamps and four roasting furnaces, and reduces seven tons in twenty-four hours. The roasted ore is amalgamated in three of Wheeler's pans, where the reduction of the chlorides is effected by iron agitators, with blue vitriol, etc. The ores are divided into three classes, the first paying from $200 to $5,000; the third class less than $100. The principal ore of the Sheba is a sulphuret, technically called Tetrahedrite. It is, says Professor Silliman, in his report, more properly a copper ore, with both antimony and arsenic. There are a number of other varieties of ore found. The common understanding that the Sheba ores are of a very 'rebellious' nature, is erroneous; that when properly treated they are easily reduced. The Sheba, in two months, is expected to be out of debt, and will pay a dividend in a short time."

A HEAVY BUSINESS.—Gillig, Mott & Co., hardware dealers, at Virginia city, have paid out $120,000 for freight alone, the past season.

The Railroad House Coach conveys passengers to the hotel FREE. Barber Shop, Bath Rooms, Steam Baths, etc., connected with the House.

15-q **C. L. ROSS, Proprietor.**

PETITION FOR SALE OF THE MINES TO THE ACTUAL OCCUPANTS.—At a meeting of the miners of Colorado Territory, held at Central City, on the 8th of November, the following preamble and resolutions were adopted :—

WHEREAS, Various propositions have recently been presented to Congress, foreshadowing a change in the policy of the Government in regard to our mines, looking to the realization of immediate revenue rather than their rapid discovery and permanent and successful development ; and

WHEREAS, There is a great danger that such legislation may tend to cripple rather than encourage mining interests, therefore

Resolved, By this meeting of miners and other citizens of Colorado Territory :—

1st. That we respectfully protest against the application of any system of tenantry to the operation of our mines.

2d. That we respectfully ask Congress to pass a law, giving in fee simple, under proper regulations, at least one thousand lineal feet of each lode to such person or persons who shall hereafter discover and develop the same.

3d. That we ask that the miners' titles to the mines already discovered, as at present held by them, be confirmed by Congress.

4th. That we ask for the establishment of a Mining Bureau in the Interior Department of the Government, and that Geological Surveys of mineral regions may be provided for.

NEW AMALGAMATOR.—The Black Hawk (Colorado) *Journal* describes a new amalgamating pan patented by a Mr. Keayon of that place. It is claimed to be an improvement on the Freiberg pan. It is described as having a main arm resting on the head of a spindle, and driven by gearing beneath the pan. The arm reaches across the center, and extends on each side half way from the center to the circumference. At each end is an upright shaft, to which is attached a cluster of mullers, eight in each cluster. They are shaped like a flat iron, thirteen inches wide at the heel, and are made of French burr. To the top of the cone is attached a stationary cog-wheel, into which meshes pinions attached to the upright shaft, thus giving the mullers a constant rotary motion, besides its motion around the pan. The advantages gained are, a perfectly even wear all over the pan bottom, and the prevention of the centrifugal motion of the water which drives the ores before the mullers. The capacity of the Freiberg pan is one ton every twenty-four hours, while this pan will thoroughly digest four tons in the same time.

A NEW MINING INVENTION.—An ingenious Pennsylvanian has invented a machine for coal mining which weighs 200 pounds, costs $300, and which, it is claimed, will do the work of twenty men. The machine operates a series of picks, which have the peculiar motion of the human arm, when manipulating a pick in under mining or bearing into the coal, and are moved up to their work by the same mechanism which operates them, and their motion and movements can be graduated to any desired speed ; hence the machine can be worked by hand, horse, or steam power.

A BRILLIANT METEOR, with a wonderfully bright light, like the glare of a rocket, was seen at Virginia City, early on the morning of the 3d instant, illuminating the whole heavens ; so bright was the light that one could see to read. It lasted for a brief space, and passed away.

STOLEN DECISIONS.—Judge Curry, of the Supreme Court, lately had a coat stolen. There were several Supreme Court decisions in the pockets at the time of the theft. The coat has been recovered, but the decisions are missing.

BROOKLYN LAW.—A Brooklyn justice has decided that hiring a horse on Sunday was illegal, and refused to grant judgment to a livery man who let a team on Sunday that ran away and smashed up the carriage.

IMPORTANT DISCOVERY
— IN THE —
Photographic Art.
Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.
[PATENT APPLIED FOR.]
THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a
SOFTNESS, CLEARNESS AND DELICACY OF TONE
unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.
In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.
"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.
☞ The public are invited to examine specimens at my Gallery. ☜ JACOB SHEW.

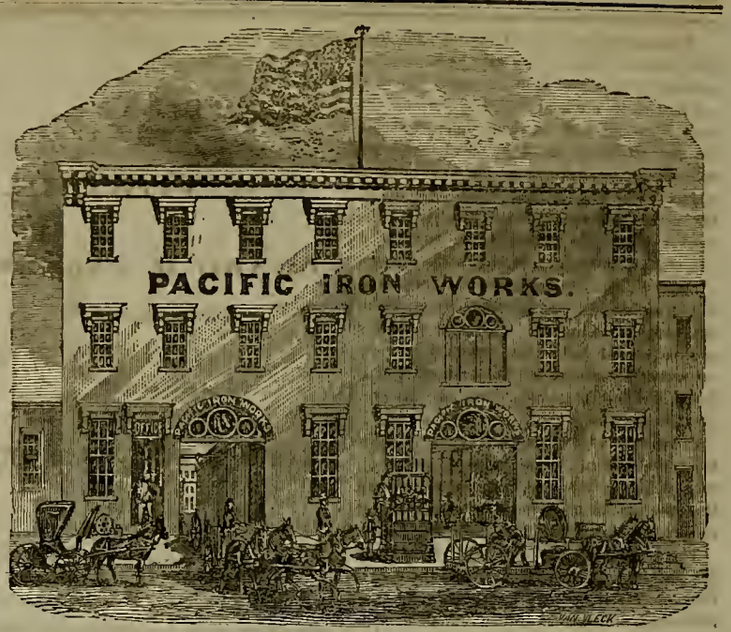
KELLOGG'S PATENT
IMPROVED NEWBURY
PRINTING PRESS.
This New, Cheap, and most Desirable
JOB PRINTING PRESS
Can now be seen in operation in San Francisco, at the office of the MINING AND SCIENTIFIC PRESS, corner of Washington and Sansome streets.
Kellogg's Improvement
is the addition of a very simple, but ingenious and effective method of self-delivering of the cards or printed sheets from the Newbury Press.
It costs less, weighs less, and prints faster than any of the ordinary Job Presses now in use. Any Journeyman or Apprentice, who understands working the Washington hand-press, will have no difficulty in operating this machine.
As a Cheap and simple Press, for small Printing Offices in the interior, it highly recommends itself.
Address, **L. M. KELLOGG.**
October 20th, 1861. San Francisco.



THE PACIFIC IRON WORKS,
First & Fremont Sts., between Mission & Howard, San Francisco.
The proprietors of the above works, invite the attention of all parties interested, to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting Machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated
Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.

MINERS' FOUNDRY
—AND—
MACHINE WORKS,
First st., between Howard and Folsom streets,
SAN FRANCISCO.
EVERY DESCRIPTION OF IRON AND BRASS MACHINery, the **Best** and **Most Economical**, manufactured in the State of California, will be furnished with despatch at the Miners' Foundry and Machine Works, as :
Steam Engines and Boilers, Flour, Saw and Quartz Mi
Machinery Mining Pumps, Amalgamators,
Retorts, Etc., Etc.
Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.
☞ Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.
All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.
tf. HOWLAND, ANGEL & KING.

GEORGE T. PRACY,
Machinist and Blacksmith.
STEAM ENGINE, FLOUR & SAW MILL And Quartz Machinery, Printing Presses,
—AND—
MACHINERY OF EVERY DESCRIPTION MADE AND REPAIRED.
Nos. 109 and 111 Fremont street, near corner of Mission, OPPOSITE MECHANICS' MILL,
qy-3 SAN FRANCISCO.

PORTLAND BOILER WORKS.
MOYNIHAN & AITKEN,
BOILER MAKERS AND SHEET IRON WORKERS,
N. B. All kinds of Boiler and Sheet Iron Work executed at the shortest notice, and on the most reasonable terms.
Mission, between Beal and Fremont Sts., San Francisco.

LEWIS COFFEY & RISDON,
Steam Boiler & Sheet Iron Works
THE ONLY EXCLUSIVELY BOILER MAKING ESTABlishment on the Pacific Coast, owned and conducted by Practical Boiler Makers. All orders for New Work, the repairing of Old Work, executed as ordered, and warranted as to quality.
Old Stand, corner Bush and Market Streets. Opposite Oriental Hotel, San Francisco, Cal.

JOHN F. GALLAGHER..... JOSEPH H. WEED.
GALLAGHER & WEED,
BRASS AND BELL FOUNDRY And Lock Factory.
ALL KINDS OF BRASS AND COMPOSITION CASTINGS AND FINISHING, DONE WITH NEATNESS AND DISPATCH.
CHURCH AND STEAMBOAT BELLS, OF ALL SIZES, made to order. Engineers' Gongs made and hung in the best manner. Bank, Vault, Store and Prison Locks, also brass Padlocks and Shop Locks of various patterns, on hand and made to order.
☞ Particular attention given to casting Rudder Braces and Ship Work in general.
☞ All Jobs promptly attended to.—Prices moderate. ☜
No. 125 First Street, opposite Minna, next door to Pacific Foundry.
[Removed from Oregon street, between Front and Davis.] j2tf

NEEDED LEGISLATION.—The Humboldt *Register* speaks of a legislative act which is needed as much in this state as in Nevada. Many of our best mines are held in part by persons who have done no work in them, unless a small harmless stroke or two of the pick before work commenced in the districts. On many of these claims incorporations have been effected by the representatives of a bare majority of the stock. Work goes on for a while, but it soon becomes an enormous tax on half the owners, working a claim for the benefit of men who will come in and claim as soon as they make the ground marketable. A more summary process should be devised for ousting these non-workers, who can not be found, or who, if found, decline or neglect to come into the corporation.

It seems to us it might be provided by legislation that suit can be commenced against all such delinquents to one claim, in mass; and that sale can be made more speedily, and not subject to redemption of the property.

The mining interest is greatly retarded, by the dead-weight delinquents; and there is a common fear of uncertainty, and a distrust of interminable litigation, which retains companies from proceeding under last winter's act against delinquents.

THE RAIN FALL during the past two weeks, storm has been unprecedented, in California, for the time. The rain already fallen the present season just about equals the entire amount which fell last Winter. An unusual amount of snow for this early in the season has accumulated on the mountains, and which will yet be largely increased. This accumulation must provide an abundant supply for the rivers and ditches during the coming Summer. The snow was seven feet deep at Dutch Flat, a week ago. Even at the present writing the weather does not appear to be settled.

THE PETROLEUM STOCK BOARD IN N. Y.—The second meeting of the New York Petroleum Stock Board was held Oct. 13th, at which over fifty firms were represented. A constitution was adopted and officers elected. The rate of commissions fixed was five cents per share on all stocks bought or sold for $5 per share or under; and ten cents all over that amount. The Board starts with a large reserve fund sufficient to insure its success and permanency, and has rented the room on the first story of the building occupied by the Open Board of Brokers on Broad Street.

BURNSIDE! BUYER THIRTY!—The suit of James L. Coggswell *vs.* C. C. French was tried in the Fourth District Court, in this city, on Tuesday last, and a verdict of $1,535 awarded plaintiff, as prayed. The suit was on 30 shares of the Burnside Silver Mining Company's stock, sold by plaintiff on a broker's contract at $45 per share, buyer's option, 30 days, which defendant refused to take up when due. The defense moved for a non-suit, on the ground that the broker's contract (the usual form) only made the amount due upon the delivery of the stock, and that a merc tender of the certificates was not sufficient, but that the stock must be actually transferred on the books of the company before the plaintiff could demand payment for the stock. The point was overruled by the court, Judge Sawyer deciding that the teuder was insufficient. The defendaut then called an expert on the stand, to prove that there was no such mine as the Burnside; that although they had ground located, there was no mine or evidence of any, and that the location was not worth a cent, and, consequently, there was no consideration to the contract. The testimony was overruled, it not being alleged in the answer that there were any representatious that the Burnside Company had a mine. Plaintiff, however, agreed to allow the defendant the privilege of proving that the stock had no value, when defendaut proposed to prove that it had acquired a value through the misrepresentation of others, which testimony was, of course, overruled. The jury were instructed to bring in a verdict for plaintiff. We give the above points, as they are frequently discussed among brokers, and the decisions are valuable, particularly as to the tender of the stock.—*Bulletin.*

THE President of the Republic of Liberia, Daniel Bashiell Warner, is of unmixed African blood. He is said to be an able statesman, an eloquent speaker and a graceful writer. He is the third President of the young Republic, which is now seventeen years old.

Machinery.

HUNT'S NEW DITCHER.

HAVING SECURED FROM THE INVENTOR THE SOLE right to manufacture these Machines for the States of California and Oregon, and the Territory of Washington, I am now prepared to receive and promptly fill orders for these machines.

With the aid of three men and four horses this Machine will cut a ditch from two to three feet deep, as may be desired, dumping the earth all on one side so as to form a alke or embankment. For particulars send for circular, to

E. O. HUNT,

Windmill Builder, No. 28 Second Street and 110 & 112 Jessie Street, San Francisco. 9v22tf

Volcanic Smelting Furnace.

PERSONS desiring information as to the Use and Economical properties of this Furnace, and intending to make use of the same, when satisfied of its superiority over all other means of reducing ores and separating metals from the sulphurets, can obtain all needed explanation and advice in regard to the same, and the terms of sale of rights to use the same, on application to Col. J. D. Stevenson, or Mrs. E. J. Hall, Proprietress, 633 Third street, San Francisco.

Drawings may be seen at the office of Col. J. D. Stevenson, No. 614 Merchant street.

The time required for reducing ores by this Furnace is from one to eight hours, and the amount of fuel only one-tenth as much as is consumed by other processes.

The process of condensation is applied to this Furnace which will save all those portions of precious metals which usually escape in a volatile form.

The attention of all interested in the subject is requested to examine the important results obtained by this process.

Parties wishing will be allowed to erect a trial furnace of a capacity for smelting one ton or more, on signing an obligation to pay the usual fee for the right to use it, should they continue to make use of the invention for a longer period than two months.

v9-20tf MRS. E. J. HALL, M. D., Proprietress.

BLAKE'S

DUNBAR'S

PATENT SELF-ADJUSTING

Piston-Packing.

Requires no Springs or Screws; Is always Steam Tight, without excessive friction, and never gets slack or leaky.

IT WILL SAVE EACH SEASON MANY TIMES ITS COST in friction, time, steam and power. No engine, old or new, should be without it. It can be easily fitted to old or new Pistons.

Having obtained the Agency of this VALUABLE IMPROVEMENT, I am prepared to furnish it wherever desired. For further information, address HENRY S. SMITH,

23v8 Golden State Iron Works, San Francisco.

IMPROVED WATER-WHEEL,

—PATENTED BY—

JOHN TYLER, WEST LEBANON, N. H.

Giving the Maximum Power with the Minimum Cost; Having the Following as Some of Its Advantages Over Others—Giving the Best Percentage of Water Used, Durability,

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—It can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 500 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address

SMITH & HANSCOM,

15v8-3m Golden State Iron Works, San Francisco.

HUNT'S

IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

9-dfatf A. J. SMITH,

FARRAND'S

Oscillating Amalgamator,

RECEIVED THE

ONLY PREMIUM

AWARDED FOR AMALGAMATORS

At the Recent Industrial Fair

OF THE

Mechanics' Institute of San Francisco.

Committee of Awards.

O. BELDEN, O. GORI, W. T. GARRATT, GEO. JOHNSON, H. P. WAKELEE, C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall, and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, whilst the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulppurets, as also for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,

R. L. OGDEN, Agent, SAN FRANCISCO.

S. E. corner Montgomery and California streets.

v9-19

Disney's Cylinder Amalgamator.

The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.

San Francisco, June 23, 1864. 1-3m

WHEELER'S

Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINed the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percetage in the amount of work performed.

☞ These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

Hepburn & Peterson's

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 864.]

HEPBURN & PETERSON.

nov8 3m*

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

PRATER'S

PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.

San Francisco, April 1st. 1864. 14v8-tf

SALMON'S

PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any other yet presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to clean and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a Stone or Iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of whgs placed like a screw propeller on the muller-shaft, force a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarity of propeller-screw and side whgs, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The Inventors of this machine are practical Mechanics as well as experienced miners, and the machine offered by them to the public is the result of long experience and close observation. Manufactured at the San Francisco Foundry, San Francisco, Cal. by

J. & W. C. SALMON,

To whom all orders should be addressed. 15

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of Iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber is also perfecting a HAND MACHINE for Miners engaged in prospecting, which will work 25 pounds of ROCK at a time, and which will weigh about 125 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,

At the Novelty Iron Works, Nos. 37 & 39 Fremont street. 15-1m

By order of the Board of Trustees.

CHAS. H. PLATT, Secretary.

Office, Room No. 9, Mercantile Library Building, N. E. cor. Bush and Montgomery sts., San Francisco. [dec10-24-4

INVENTORS AND INVENTIONS.—Let us not cheapen inventions, but be kind to the inventors; beware of killing the goose that lays the golden egg! Many inventors die before the hour of triumph; others falter by the way. Invention is a struggle, a conflict, almost a battle; if the victors are rewarded, the dead are honored and the wounded carefully attended to. Glorify the inventors who succeed; cover with an indulgent self-respect the faults of those who fail; and soothe the last years of the wounded—those invalids of industrial science who have known only the pains of the fight, and always remained ignorant of the joys of victory. —[Dumas.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs. Wallace, Allen & Hardyngo. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY, Agent, Government House, San Francisco. 15-tf

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

PROFITABLE INVENTION.—It has always been a great desideratum with farmers to find some way, other than by hand, in which grain might be sown evenly, as much or as little to the acre as might be desirable. This object has at last been attained. Robert Baxter of this county, living near French Camp, has invented a sowing machine which enables the farmer to sow evenly, from ten to three hundred pounds per acre, and any width desirable. The machine was on exhibition at our District Fair, and received a special premium. It is very ingeniously constructed, but simple in its operation, and not liable to get out of repair. We understand that four machines are already in use, and working to the entire satisfaction of their owners. The makers are Campbell & Waleot, French Camp, five miles from Stockton, who inform us that at least fifty machines have been already engaged. They contemplate opening a shop in Stockton on an extensive scale, to supply the immense demand there is for these machines already. Cutler Salmon, of French Camp, is using one of these machines, nine feet wide, with three gangs of plows following, sowing and covering a strip nine feet wide. He has twelve horses, four abreast, in his team, and with only one man to attend it, is putting in from fifteen to eighteen acres each day. Mr. Baxter has applied for a patent, and will undoubtedly reap a rich harvest from his invention.—*Stockton Independent.*

NEWSPAPER CHANGES.—R. Ferral, one of the proprietors of the late Aurora *Times*, is about to take the material of that paper to Montgomery District and start a weekly journal there, to be called the Montgomery *News*. The *Weekly Bulletin*, published at Silver Mountain, in Alpine county, has been discontinued. It expresses the hope of being able to renew the publication of the sheet in March next. I. J. Rolfe has transferred his interest in the Nevada *Gazette* to O. P. Stidger. W. J. Beggs has become connected with it as joint proprietor and chief editor. Mr. H. C. Bennett, late of the San Francisco *Flag*, has assumed the editorial charge of the Grass Valley *Union*. C. R. Webb, the originator of *The Californian*, has returned to his "hantling," and united with other gentlemen in an association for the publication of that excellent journal.

ORIGIN OF THE TERM CABAL.—When Charles II. of England mounted his throne he called together a cabinet, or ministry, of every stripe of opinion, each pulling against the other, each intriguing, each the leader of some faction. Their names were Clifford, Ashley, Buckingham, Arlington, Lauderdale. They led or followed the passions of the people, as best suited their convenience, having no fixed principles whatever. The first letter of the names of the worthless ministers spelt the word C-A-B-A-L (cabal). Since that time this term has been applied to leaders of faction.—*Exchange.*

KEROSENE LAMP WICKS.—A correspondent of the Scientific *American* says:—"In the present price of kerosene lamp wicks, people can make a better wick than they can buy, by taking cotton flannel, of which all have pieces, and folding it up three thicknesses, just wide enough to go into the tube, and catching the edge with coarse stitches."

1852. 1864.

TWELFTH YEAR OF PUBLICATION.

THE GOLDEN ERA,

Founded in 1853.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in the Golden Era.

The most popular Novels of the present day—

"THE DOCTOR'S WIFE," by Miss Braddon.

"OUR MUTUAL FRIEND," by Charles Dickens;

published as Serials, from week to week, in THE GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the Contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California, and on the Pacific Coast; also correspondents and contributors of distinguished talent in the Atlantic States and Europe; including "Orpheus C-Kerr," Fitz Hugh Ludlow, G. B. Densmore, "Mark Twain," Dan De Quille, Florence Fane, Miss Emma Hardinge, Sarah E. Carmichael, Annie E. Fitzgerald, "Oceasia Owen," Alice Mason, William Simpson, Chas. F. Stoddart, "Ina," H. C. Williston, "Albion," "Fairfax," Bonnevel, Mary Kyle Dallas, Margaret Hosmer, and many other accomplished writers of Fiction, Romance, Novels and Stories, Poetry, Essays, Sketches, etc., etc., comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States or Europe.

The proprietors of the GOLDEN ERA announce the receipt of advance Sheets of Miss M. E Braddon's New Novel,

The Doctor's Wife,

The most brilliant effort of the celebrated author of "Aurora Floyd;" "The Outcasts;" "Three Times Dead;" "Lady Audley's Secret;" etc., etc.

"THE DOCTOR'S WIFE," now in course of publication in London, is universally pronounced to be Miss Braddon's greatest production. It will be completed in sixteen numbers of THE GOLDEN ERA.

Sent from the Office to any Address in California and Oregon—Nevada, Washington, Idaho, Utah and Colorado Territories—the Atlantic States, Europe, and all parts of the World.

Subscriptions to be Paid in Advance.

ONE YEAR $4. SIX MONTHS $2. THREE MONTHS $1.

Take care to write distinctly the name of the person; the name of the city, town or locality where the Post office is situated, and the name of the County and State, in order that the paper may be fully and accurately directed to every address.

THE GOLDEN ERA TO CLUBS.

Parties (living remote from localities where agents are located) forming a club of five yearly or half-yearly subscribers, and forwarding the subscriptions (by letter registered and postage paid) to the office of publication in San Francisco, will be entitled to an additional copy of The GOLDEN ERA for the term of one year, or to retain the equivalent in cash.

AGENTS in every part of the State receive subscribtions or the GOLDEN ERA.

POSTMASTERS in California, Oregon, and neighboring Territories, obtaining subscriptions for the GOLDEN ERA and forwarding the same, with name and address of the subscriber, will be allowed a commission therefor.

PARTIES residing in localities where no Agents are established will forward their subscriptions by mail.

SUBSCRIBERS will be careful in writing as plainly and fully as possible, the direction of papers to be sent to any part of California, the Atlantic States, or elsewhere.

Now is the Time to Subscribe.

TO ADVERTISERS!

Best Advertising Medium—The "Golden Era" is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village, and mining and agricultural precinct in California, and offers unusual and unequaled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as these of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

GOLDEN ERA POSTAGE.

POSTAGE on the GOLDEN ERA, to Mail Subscribers, in California and throughout all the States and Territories of the Union, per quarter, (3 months).... 5 cts. To be paid quarterly, in advance, either at the Office of Mailing or Delivery.
POSTAGE on the GOLDEN ERA, Single Copies, transient, to be prepaid by stamps..... 2 cts.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

And in accordance with law, and an order of the Board of Trustees, made on the 26th day of October, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at public auction at the salesroom of Maurice Dore & Co., No. 327 Montgomery street, San Francisco, California, on the 14th day of December, 1864, at the hour of 11 o'clock A. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

J. S. MEYER, Secretary.

Manzanilla Mining Company, Sinaloa, Mexico.

NOTICE.—The Semi-Annual Meeting of the Stockholders in the above named Company, for the purpose of electing Trustees, and the transaction of such other business as may come before the meeting, will be held on Wednesday, December 14th, 1864, at 7½ o'clock, P. M., at the office of the company, No. 706 Montgomery street, San Francisco. A full attendance is requested, as business of importance will be brought before the meeting. By order of the Board of Trustees. E. C. McCOMB, Sec. pro tem.

23

Mammoth Gold and Silver Mining Company, Rock Spring District, San Bernardino County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of the said Company, held on the 19th day of November, 1864, an assessment of sixty cents per share was levied upon the capital stock of said Company, payable on the 21st day of November, 1864, in United States gold or silver coin, to the Secretary, at the office of the company, No. 611 Clay Street, Room 8, San Francisco.

Any stock upon which said Assessment shall remain unpaid on Saturday the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 9th day of January, 1865, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

nov26-22-4 GEORGE BOWER, Secretary.

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

New Era Copper Mining Company, Salt Spring District, Tuolumne County, California

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 18th day of November, 1864, an assessment of 25 cents per share was levied upon the Capital Stock of said Company, payable on the 19th day of November, 1864, in United States gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 7th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

C. B. TOWLE, Secretary.

And in accordance with law and an order of the Board of Trustees, made on the 19th day of September, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the salesroom of Maurice Doré & Co., No. 327 Montgomery street, on the 5th day of December, 1864, at the hour of 12 o'clock, M., of said day, to pay said delinquent assessment thereon, together with the costs of advertising and expenses of the sale.

L. C. DODGE, Secretary.

Office No. 406 Front street, San Francisco, Cal. 21

POSTPONEMENT.—The above sale is postponed until Thursday, December 15th, 1864, at the same place and hour. By order of the Board of Trustees.

23-21 L. C. DODGE, Secretary.

POSTPONEMENT.—The above sale is hereby postponed until Friday, the 23d day of December, 1864. By order of the Board of Trustees. L. C. DODGE, Secretary.

24-2

Silver Prize Gold and Silver Mining Company, Silver Mountain District, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 17th day of October, 1864, an assessment of 15 cents per share was levied upon the capital stock of said Company, payable on the 17th day of October, 1864, in United States gold coin, to the Secretary, or to the Superintendent at Silver Mountain.

Any stock upon which said assessment shall remain unpaid on Saturday the 19th day of November, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday the 3d day of December, 1864, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. WARREN CLARK, Secretary.

Office, 430 Montgomery street, San Francisco.

POSTPONEMENT.—The advertisement of stock delinquent on the above assessment is hereby postponed until Saturday, December 17th, 1864, and the sale thereof until Saturday, December 31st, 1864. By order of the Board of Trustees.

21-4 J. WARREN CLARK, Secretary.

United States Mining Company, Virginia District, Storey County, Nevada.

Notice is hereby given that the Annual Meeting of the above named Company will be held on Monday, December 26th, at 2 o'clock P. M., at the office of the Secretary, Nos. 8 & 10 Government House, corner of Sansome and Washington streets, San Francisco, Cal.

22-5 J. M. BUFFINGTON, Secretary.

United States Mining Company, Virginia District, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of November, 1864, an assessment of one dollar per share was levied upon the capital stock of said Company, payable on the 22d day of November, 1864, in United States gold and silver coin, to the Secretary, or to Jas. V. COFFEY, Virginia.

Any stock upon which said assessment shall remain unpaid on Saturday, the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 7th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. M. BUFFINGTON, Secretary.

Office, Nos. 8 & 10 Government House, corner Washington and Sansome Streets, San Francisco, Cal. nov26-22-4

Wilson Copper Mining Company, Garden Bar District, Placer County, California.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 31st day of October, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

Wilson & Bicknell	15	27	13 50
Wilson & Bicknell	118	27	13 50
Wilson & Bicknell	154	100	50 00

And in accordance with law, and an order of the Board of Trustees, made on the 31st day of October, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, at the office of the company, on the 17th day of December, 1864, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

W. L. KIRBY, Secretary.

Office, Room 8, No. 611 Clay street, San Francisco.

dec3-23

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

To Keep Grapes Through the Winter.—The American *Agriculturist* recommends the following plans:—

Let the grapes be picked before they are dead ripe and when perfectly dry; remove all the defective ones; wrap each bunch well in old paper or cotton, and not allow more than two layers in a box; place in a cold, dry room where they will not freeze.

Another.—The French preserve grapes the year round by coating the clusters with lime. The bunches are picked just before they are thoroughly ripe, and dipped in lime water of the consistency of thick cream. They are hung up to remain. The lime coating keeps out the air, and checks any tendency to decay. When wanted for the table, dip the clusters into warm water to remove the lime.

Bad Roads in Washoe.—Several mining claims in Virginia City and Gold Hill have suspended work in consequence of the state of the roads being so bad that teams cannot haul the quartz to the mills. The Savage, Chollar and Hale & Norcross companies have suspended work for the present. The two former have their ore houses full, while the latter is compelled to stop operations for a time, because of the difficulty of getting the cars over the track to the dump pile, owing to the accumulation of snow.

California Brandy.—It is said that a large portion of the Hawaiian molasses received here from the Islands is taken into the grape-growing countries of the interior, probably with a view of making it into California Brandy, after the style and quality of French (Bordeaux.) During the past four months we know of from 500 to 1000 bbls of this Sandwich Island molasses that have been purchased, as is supposed, for such a purpose.

Water and Morals.—A very slight declivity suffices to give the running motive to water. Three inches per mile, in a smooth, straight channel, give a velocity of about three miles per hour. Now, what is true of water is equally true of morals. The best of men only need a slight push from adversity to obtain a downhill momentum. Be careful, therefore, how you lose your equilibrium.

Dead.—Benjamin Greenleaf, author of the popular series of school arithmetics, and the first to popularize the teaching of English Grammar, by a book entitled "Greenleaf's Grammar Simplified," died in the East, lately, at the advanced age of seventy-eight years.

Paper Question.—The Chicago *Tribune*, in answering some of its subscribers' complaints about the quantity and color of paper used, says "the difficulty is not now to get bad or good paper, but to get paper at all." Printing paper is a very scarce article, and the price is advancing, notwithstanding the decline in gold.

Rats.—It is estimated that these pests cost the nation $10,000,000 annually.

Bound Volumes Ready.—Bound copies of Volume VIII of the Mining and Scientific Press, due the following honorable gentlemen, are now ready, and will be forwarded on receipt of their orders for the same:

Honorable Seth Martin, Nevada.
" R. A. Clark, Union Valley, Plumas.
" J. P. Rhodes, Sacramento.
" A. A. Smith, Nevada.
" S. S. Littlefield, Siskiyou.
" E. H. Snyder, Placer.
" O. P. Stidger, Nevada.

Give us directions how to send them, gentlemen.

Canvassing Agent Wanted

For the Mining and Scientific Press.

An experienced, prompt and reliable agent can secure a desirable and lucrative engagement by applying immediately at this office.

Advertising Circular.

The Proprietors of the Mining and Scientific Press would call the especial attention of Mining Secretaries, Trustees and Shareholders, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The Press enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the Press is less by one half than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the Press, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

American and Foreign Patent Agency

FOR THE

PACIFIC COAST.

DEWEY & CO., AGENTS,

AND PUBLISHERS OF

The Mining and Scientific Press,

Corner of Washington and Sansome Streets.

We would call the particular attention of INVENTORS and DISCOVERERS in ARTS, MECHANISM, METALLURGY and CHEMISTRY, to our superior advantages for soliciting Letters Patent in the United States, British Columbia, European and other Civilized Countries.

We have secured the co-operative services of some of the oldest, most thorough and reliable Patent Solicitors and Attorneys at Washington, and in Foreign Countries, and our Applicants can have their claims and specifications properly and speedily presented, without the delay necessarily required in transacting their business through Eastern or Foreign Agencies. For further information, address

DEWEY & CO.,
Publishers and Patent Agents.

Corner of Washington and Sansome Streets, San Francisco.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the Press or some other paper.

6th. Many copies of the Press are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Our rates are uniform as well as moderate. Advertisements will be taken from the forms and printed on slips or as circulars, for sending personal notification to stockholders, whenever desired, at $1 per hundred.

9th. Advertisements in the columns of the Press, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

10th. Blanks for filling out advertisements of assessments or notices of sale are furnished gratis. Our rates of advertising, and any other information desired, will be freely given upon application at the office.

Last, but not Least.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the Press shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

DEWEY & CO.,

Publishers of the Mining and Scientific Press, Nos. 11 & 56 Government House, Corner of Washington and Sansome streets, San Francisco.

The Mining and Scientific Press makes its appearance upon an enlarged sheet. The *Press* is by far the best scientific paper ever published on the Pacific coast. Its contents exhibit both industry and ability. We wish it continued success.—*Washoe Herald.*

Scientific and Mining Journal.—This is as valuable a publication as is produced on the Pacific Coast, and one which interests all parties. It contains much that is instructive and entertaining, and seems to have the right men at the head of its affairs.—*Spirit of the Times.*

"Mining and Scientific Press."—This excellent and valuable paper has been enlarged by the addition of sixteen columns. It is one of the most complete and interesting mining journals in the United States.—*Daily American Flag.*

MINING BLANKS

For Sale

AT THE

OFFICE OF THE MINING AND SCIENTIFIC PRESS,
Nos. 11 & 56 Government House.

Blanks for Mining Companies, Secretaries, Shareholders and others, always on hand, or printed to order, at our office.

Among others are those of the following forms:

Shareholder's Proxy.

Know all men by these presents, that I, ... do hereby constitute and appoint ..... my attorney and agent, for me and in my name, to vote as my proxy, at a meeting of the ..... Mining Company, to be held ..... 186 , according to the number of votes that I should be entitled to cast were I there personally present.

In witness whereof I have this day hereunto set my hand and seal. .....[Seal]

Dated 186

Assessment Notice.

..... Company

....

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the ..th day of ....., 186 , an Assessment of .....per share was levied upon the Capital Stock of said Company, payable on the ..th day of .....186 , in United States gold and silver coin to the Secretary.

Any stock upon which said Assessment shall remain unpaid on Saturday, the ..th day of ....., 186 , will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on ....., the ..th day of ....., 186 , to pay the delinquent Assessment, together with the costs of advertising and expenses of the sale. By order of the Board of Trustees.

..... Secretary.

Office.....

Delinquent Sale.

Notice.—There are delinquent, upon the following described Stock, on account of assessment levied on the ..th day of ....., 186 , the several amounts set opposite the names of the respective shareholders as follows, to wit:

PRINTER'S WAREHOUSE

TO MINE OWNERS.

REDUCTION AND SMELTING WORKS ON A SUFFICIENTLY large scale, where Ores of every kind can be thoroughly treated, so as to extract therefrom the precious metals, have long been wanted in California.

The Undersigned is desirous of erecting such works to meet the demand, provided sufficient encouragement can be obtained in regard to the quantity of work which may reasonably be looked for.

I have sufficiently proven, in my former smelting works, on Bryant Street, where I worked the richest of the Ophir ores to within Two and One-Half per cent. of the Assay, that I was acquainted with Metallurgy previous to my recent travels and experience in Europe, where I have built, during my sojourn there of nearly three years, many Reduction Works, thereby proving that I am capable of working ores by any and all known processes, whether by Smelting or Amalgamating, or other methods best adapted to the nature of the ore to be worked, and as close to the assay as can be done anywhere in Europe.

Mine owners wishing quantities worked as cheaply and effectively as can be done by sending it to Europe, will address the undersigned. Parties wishing to erect Quartz Mills, or other Reduction Works, can be furnished with Plans, Estimations, and other useful and necessary information as to the best mode of extracting the precious metals.

Address **J. MOSHEIMER,**

Office, Nos. 14 & 15 Mead's Building, Corner of Pine and Montgomery Streets, San Francisco. 9v23tfq

BRANDRETH'S PILLS.

This Medicine often Cures when all others have failed. They prevent Apoplexy; they Cure Diseases of the Heart and Nervous Diseases, and as a

Purgative and Bilious Pill,

They have not their equal in the World.

Employed according to directions, accompanying every box of new style, they produce

Great Purity of the Blood and the System Generally,

Causing only the removal of vitiated matters which have become useless or injurious, and seeking in the reconstruction of diseased parts of nothing but sound and healthy materials.

THE USE OF BRANDRETH'S PILLS

OCCASION

The Actual Decrease of the PRINCIPLE OF DEATH, and an Increase of the Vivifying, the Life Principle.

B. BRANDRETH,
294 Canal Street, New York.

W. F. BRANDRETH,
Office at Crane & Brigham's, San Francisco.

By sending $1 in coin to the above address, five boxes of pills will be sent to any part of this coast or the interior, Free of charge. 16-3m4c8p

NOTICE TO MINERS.

NEW QUARTZ MILL.

THE ATTENTION OF ALL ENGAGED IN MINING IS called to Fauchery's unrivaled Mining Machines, consisting of his celebrated Turbine Water Wheel, which took the First Premium at the Mechanics' Fair at San Francisco for 1864; his Crocodile Quartz Crusher; his Pulverizer; and his Improved Freiberg Amalgamating Barrel; altogether forming the most complete and effective Quartz Reducing and Amalgamating Mill now in use. This mill can be put up at less cost, run with less power, and accomplish more work, than any other now in use.

B. Fauchery and F. Genard

Having established a Quartz Mill and Metallurgical Works, are now prepared to crush, roast, amalgamate, assort, cupelate, and give correct analysis of ores. We are also prepared to give our attention to the building and constructing of Quartz Mills and Furnaces, and give directions for working Mines; and also to instruct persons in all branches appertaining to Mining Works, at No. 23 Freeont street, near Market, Railroad Foundry building.

F. GENARD, **B. FAUCHERY,**
Metallurgist. **Engineer,**

9v24

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—Eds. Press.]

Practice vs. Theory.

Editors Mining and Scientific Press:—In an article in your last issue, headed "False Premises," I see a few errors, which need correction. The miners' inch is very generally adopted in this State to express the discharge of a certain quantity of water through an aperture one inch square, under a head or pressure of six inches, measured directly at the orifice to its center. According to Weisbach (Amer. edition, bk. i., p. 368), the formula which gives the discharge corresponding to one inch of water, miners' measure, is as follows:—

M = the coefficient of efflux;
a = the depth of orifice;
b = the breadth of orifice;
g = the acceleration of gravity;
h = the head of water.

M, a. h. (2gh) ½ = 0.64 . 1-12 . 1-12 (2. 32-2 . ½) ½ = 3.73-144 cubic feet per second, or 2,685 cubic inches per minute, which is only 64 per cent. of the amount given by the writer of the above communication, showing that he made no allowance for friction or contraction, giving a mere theoretical result. If the writer of the above article had to buy the water of any of our ditch companies, he would find to his chagrin that he could only do 64 per cent. of the work he calculated to with the water at his disposition. The result of the above hydraulic formula corresponds very well with practice, as experiments with the view of ascertaining the truth of the formula, for practical purposes, by a ditch company in Nevada county, seven years ago, have fully demonstrated. The committee of awards on pumps, waterwheels, etc., could not have investigated the mechanical effect of Hansbrow & Redding's water-power engine very closely to give a statement to the effect that one-horse power could be obtained by the use of every inch of water (miners' measure), under a head of 200 feet, by the above machine. One inch of water, with a head of 200 feet, can give a theoretical result (considerably below a practical one in this case, on account of loss of head by friction, shock, entrance, curves, etc.,) of 3.73-144x62.5x200 = 323 pounds in a second —*i. e.*, nearly 6.10 of a horse-power.

Allowing an efficiency of 70 per cent. a high one for a water-pressure engine, an inch of water cannot perform more than 0.7x0.6 = 42-100 of a horse-power, when expended by the machine under the above pressure.

G. F. Deetken.

There is a wooden railway in New Zealand, over which an eight-ton engine has made four thousand eight hundred trips in five months, drawing loads of thirty to forty tons, with so little friction as not to efface the saw marks on the rails.—*Exchange.*

If the above is true, the New Zealanders must be far ahead of the "rest of mankind" in the practical application of mechanics, or else they must have a very superior quality of wood at their command.

The science that could teach many men to forget, would be more welcome to them than all the trickery of Mnemonics.

There are about nine thousand soldiers in the service of the United States upon this coast.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

VIRGINIA CITY CORRESPONDENCE.

BY OUR LADY CONTRIBUTOR.

I write under a cloud to-day, and I fain would throw aside pen and paper, and betake myself to a stroll in the street, or do anything which would promise to break through the monotony of this hum drum house existence. For a whole week I have been caged in my board and canvas walls, and have scarcely ventured to peep forth, and all for a good reason; the weather said nay.

Thanksgiving was respected by Virginians by the closing of business houses, the donning of Sunday-go-to-meeting toggery, and the gobbling up of innumernble gobblers. The pealing of the church-bells called my wandering feet to one of the several houses of divine worship which honor our moral city with their presence, where I had my patience called into requisition in listening to a sermon "as was a sermon," and, feeling that I had returned sufficient thanks for the blessings conferred on me—in taking the breath from the minister and forcing him to stop talking—I hurried home to partake of a "thanksgiving dinner" gathered up in Mrs. Smith's inimitable style. When the shades of evening had fallen, the cheering notes of the violin, the busy shuffling of feet, and the merry laugh of the dancers, lured me into the giddy mazes of the dance, and 'twas "i' the wee sma' hours" before found myself securely ensconced in bed. This was all very nice, but old Boreas, out of spite for our Thanksgiving enjoyment, "let himself loose" on the subsequent day, and whirled down from his mountain fastnesses on our devoted city, overturning cabins, smashing signs and awnings, lowering big people, carrying loose articles, women and babies, before him, and playing havoc with old women's crockery-ware. When he was played out, he gathered the clouds, and the rain came down in torrents for two mortal days, flooding streets, cellars and houses, and making things agreeably slushy everywhere. And yet the controller of the weather had not handed in all his checks, and we poor mortals had not done sufficient penance for our Thanksgiving follies; for no sooner had the rain ceased coming, than a veritable Washoe snow storm set in with all imaginable fury, whirling and drifting in eddies until our main streets were almost impassable, and the very few pedestrians were loth to venture far from shelter and the fireside. Washoe has not before witnessed such a violent storm for some years, and business was generally suspended during its prevalence. Many of our mines were obliged to stop operations for the time; as it was, and is yet, impossible for quartz teams to haul to the mills; the wires, east and west, were down, the stages were delayed, and we were left "in the dark" as to Sherman's intentions, and we poor women have not ventured forth to show our balmorals and pretty feet to the admiring crowd of bummers; our beaus failed to make their appearance, gossip and scandal soon became exhausted, and we had recourse only to yawning and venting our spleen on all who came within hailing distance. What misery was ours?

Everything is so dreary and so solitary here that it makes one feel homesick in spite of themselves. Look where you will, the eye can only behold mountains robed in misty snow shrouds. Looming far above our city is sullen Mount Davidson, stiff and stark, with his wintry robe wrapped so closely around him as to throw out his angular form in bold relief against the cloudless dome, and with his loftiest peaks hidden in drifting clouds of glittering snow; the Cedar range, the Sugar Loaf, the grim mountains of Como, and the distant Desert range, all present the same corpse-like appearance. Not a human habitation is visible, not a single object suggesting life or animation, appears to break the drear silence, the painful solitude, which enwraps their lifeless forms with even more mystery than does their ghostly shrouds of snow. I turn from gazing on them with a shudder of loneliness, and long so much for the sweet clime, the distant sky, so etherial and so fathomless in its depths, and the verdure crowned hills of the American Naples; aye, even for the sage brush and alkali dust in preference to this grim, ghostly solitude. But I wander.

Having been deterred by the inclemency of the weather from making my usual tour among the mines, I am ignorant of any changes that may have taken place in their *status*, and must confine myself to other matters in my present letter.

MINING ABUSES—INCOMPETENT SUPERINTENDENTS.

Many of our enthusiastic feet-holders will scout the idea of there being mining abuses in in Washoe, and methinks I perceive some of our mining experts (so-called) raise their hands and roll their eyes in astonishment at the bare idea of a lady so far forgetting her subordinate position in the world's society as to criticise the motives and actions of our mining wiseacres and great "I ams;" and the whisperings of our Washoe zephyrs bring such gratuitous epithets to my ears as "strong-minded," "blue-stocking," and others yet more flattering. Now, my dear sirs, I do not profess to have sufficient nerve to entitle me to any of these cognomens; if I had, I would be better pleased, perhaps, but instead I am a very small and a very poor specimen of "earth's angels," and am, perhaps, the best definition of "good-for-nothing" that can be found; and I am responsible for what I say, from the fact that I do not yet possess a stern six-footer to be accountable for my wilful pranks, and take up the gauntlet at my bidding. Considering my lonely and unprotected condition, I may be a little foolhardy in stepping out from *our* sphere of minding babies, mending garments, and knowing nothing beyond man's will, to indulge in common sense talk; but when I take a notion to have my "say" on any subject I generally have it, despite the frowns of pious damsels of an uncertain age, and spectacled pedants who know everything that is to be known and considerable that is *not*.

I am glad to find that many changes for the better have taken place in mining affairs during the past year, and these changes give the gratifying assurance that we are becoming educated, though at a heavy outlay, and we begin to see the folly of many of our dogmatical views on mining affairs. My first visit to this region was during the spring and summer of '63, when the mining fever was at its hight, and then, all that was deemed requisite was to stick up a notice on the most convenient point of rocks, call it the "Invisible Silver Brick," or the "Can't See It" ledge, squander several thousand dollars of the shareholders' money in erecting a large sign with the name of the claim painted thereon in gilded letters, and with extensive flourishes, at some prominent place, and make a show of work, and then advise your friends to purchase a few feet from you at a thousand dollars, more or less, per foot. As a natural result of this line of policy, the stock market was glutted with "wild-cat," to the exclusion of much really valuable stock; people were induced to invest the little they had laid away for a "rainy day" on the strength of glowing reports from Superintendents and *experts*, and gratifying assays of rock of which thousands of tons were "in sight"—they forgot to add "in some other mine"—expecting to realize a fortune; and, after paying assessments without number, until their pockets were emptied, finding the rich divideuds yet existing only in promises, and the stock depreciating, is it any wonder that they began to lose confidence in Washoe and her mines. On the very few mines that were vigorously prospected the work was done in such a bungling manner as to benefit neither owners nor miners, and much of it was or must be necessarily abandoned. As we sow so must we reap; we sowed the seeds of a panic and a panic was the result. Stock depreciated, people lost confidence and could not perceive merit in even our most flourishing mines, and sacrificed the valuable with the worthless. Some lost fortunes by the collapse and were financially ruined; others were crippled in business; while all lost more or less severely. But we less, to pay expenses of developments. Polished boots, spotless gloves, and an immaculate toilet need never be soiled by entering the mine; such *trouble* is altogether unnecessary. Do you think the picture overdrawn? Visit us and "take notes" for one week, and you will leave convinced that I have done but poor justice to it.

without a grimace, and with our indomitable pluck and constitutional vigor we are fast convalescing. Our experience has cost us dearly, but there is consolation in the knowledge that we might have continued on in our mistaken ways for another year, and until our resources were so crippled that we could not have recovered from the shock.

But is there nothing to fear in the future? During a recent conversation with a well known mining operator, he expressed the view that "our mining interests had suffered from their last check, and there were no more evils to be apprehended; the course of our mines, hereafter, was undoubtedly one of glorious success." With all due deference to this high authority, I am honestly of the opinion that our mining interests are fast hastening to an era of evils which will require all our mining talent and ability, and the closest care and watchfulness of our incorporate bodies, to safely extricate us from; indeed, I may go so far as to say we are at present suffering from the effects of some of those evils, but in our own selfish egotism we shut our eyes to the fact.

Let us look for a moment at the management of our mines. In the superintendent we find the embodiment of the corporation; it speaks and acts through him, and the shareholders and people at large look to him for the prosperity of the mine. He has complete control of the mine, and directs all the operations thereon; he employs the necessary laborers, and instructs the making of improvements, the running of drifts, sinking of shafts, and the extraction of ores; in a word, he is supposed to carry on the mining operations in such a manner as will best advance the interests of the shareholders, and increase the value of the mine. To be competent for his responsible position he must be so thoroughly informed as to the *theory* of mining that he may be acquainted with the rules and reasonings which apply to the formation existing, its character and peculiarities, and he must be a *practical* miner, that he may apply these theoretical rules correctly, or judge of their incorrectness, and that he may understand the method of working advantageously and employ experienced laborers who will know how to take advantage of the peculiarities of formation in working, and conduct operations economically and systematically. With theoretical knowledge, *alone*, he may make expensive improvements and prosecute such work that, with practical knowledge, he would have avoided, or, at least, have completed with much less outlay. With practical knowledge, *alone*, he may make such developments that, with theoretical knowledge, he would have learned were not warranted by the prospects and character of the mine. He must understand the principles involved in the sciences of geology, chemistry, mineralogy and metallurgy. I do not mean that he should be an *adept* in these sciences, but I do mean that he should have sufficient knowledge of them to understand the character of a mineral lode and decide on the continuance, etc., of its metalliferous deposits, how to extract and select the the ores and ascertain their character and value, and understand the principles involved in their reduction, that, if necessary, he may superintend their working. And lastly, he must be a thorough business man, affable and gentlemanly, yet dignified, in his intercourse with his employees, punctual to business engagements and honorable in his dealings. That we have very few superintendents of mines possessing *all* of these qualifications, all will agree; that we have many possesssing *none* of them is a well known fact; and yet none will differ with me when I say that upon the superintendent rests in a very great degree the prosperity of the mine and the pecuniary success of the shareholders.

And what are the qualities which are looked for, and are deemed almost indispensable in a mining superintendent of the present day? In concise language, foppish dress, a flashy air, a fast team, several fancy women, costly establishment, an acquaintance with all the fast men and women of this fast community, sufficient knowledge to write a letter made up of flattery, hopes, promises and untruths, and a monthly demand for twenty thousand dollars, more or weathered the storm and are again ourselves, though crippled and in a sorry condition. Our mining men saw the necessity of a change of policy as the only remedy, and, though it were the "plucking out of a right eye," we adopted it.

Is it then to be wondered at that costly tunnels have been driven and shafts sunk for which, when completed, no use could be found; that machinery has been ordered and paid for which is inapplicable for the purpose required, or, indeed, for any other purpose; that palatial residences have been erected and furnished in magnificent style for the accomodation of dissipated officers, and their dissipated attaches, to be paid for from the pockets of the shareholders; that our largest and handsomest mill stands, to-day, a monument of folly; one of our most noted mines threatens every day to tumble in and destroy improvements, and bury in its ruins many human lives; another of our richest mines has never paid a dollar for investments, and is yet heavily in debt—from what reason except incompetent management no one who examines its rich deposits can answer; and yet another of our mines has its stock trebled in value through the report of a mistaken or an ignorant superintendent, thus swindling many unsuspecting victims? And thus might I enumerate instances of the same character to the end of the chapter; and it is a long chapter.

Do you wish to have a view of the other side? You have it in the palpable fact of one of our mines increasing its dividend fifty per cent shortly after the employment of an *experienced* superintendent; of another, which, under the management of a kid-gloved *miner*, was reported worked out, and its ores did not pay milling expenses alone, yielding, after a single month's care from a *practical* superintendent, one hundred tons of rock per day with an average yield of eighty dollars per ton; and of yet another, after its shareholders were discouraged and had given all up as lost, making a startling, and what has proved a successful, defense against the onsets of the Comstock combination through developments made by a *veteran* manager.

And what conclusions are we to draw from these facts? Simply, that if we wish to avoid another crisis in our mining affairs, a change of policy, and a change in government of many of our mines, must be immediately inaugurated with capitalists and mining men. They must learn that mining is a science, and a most intricate one, which requires *considerable* theoretical and *extensive* practical experience to master; they must do away with their butcher, baker, broker, and gentleman superintendents, who may understand the principle involved in their several trades, but, in many instances, do not know a silver lode from a granite peak, and even cannot recognize silver unless when it bears Uncle Sam's stamp; and they must abandon their expensive experiments which are so many reminders of the folly and ignorance, or gullibility, if you prefer it, of Washoeites. To make our mines profitable they must be worked on a system and to a purpose beyond that of squandering money and getting a fictitious valuation on our stocks; and to effect this we must have superintendents of large mining experience and acknowledged ability; men who will work our mines energetically and yet economically, and for the benefit to be derived from them. Until mining men see the importance of these truths and act upon them, our mining stocks will be a fruitful source of foolish hazard. I will have more to say on mining abuses in future communications.

POTOSI VS. BAJAZET.

The decision in this important case has been rendered by Judge Mesick, the referee before whom it was argued, in favor of the Bajazet, and denying the injunction asked for by the Potosi. The decision is agreeable with popular opinion, and, I believe, with justice, and it

bears much additional importance from the fact it materially affects the "one-ledge" theory, and it is the first (may it not be the last) victory gained over the Comstock annconda. All opposed to the one-ledge theory, and they are n very large majority of our population, are of course jubilant, and Bajazet is in the ascendant. The result has crowned the veteran miner and superintendent of Bajazet, Cummings Cherry, with new laurels; nnd he deserves them, for it is in a great measure owing to his indefatigable exertions, and the masterly manner in which he conducted developments and exposed the one ledge fallacy, that the victory has been secured.

The "typos" made sad work with many of my pet ideas in my last communication; as, for instance, they made me say our judges were men of "stern proclivity." Now *that* may be so, but my manuscript had it "stern probity," and with all due de'erence I prefer my way of expressing my exalted views of the gentlemen. Other typographical errors occurred, but a word to the wise, etc. FLOY FAVORITE.

Virginin City, Na., Dec. 3, 1864.

Rules for Constructing Cone Pulleys.

EDS. MINING AND SCIENTIFIC PRESS:—Last week you kindly gave me an opportuaity, through your columns, to have a growl in general at the absurditics sometimes put forth by inventors, and a growl in particular nt the absurdities put forth in the late "Report of Committee of Awards on Water Wheels, Hydrostatic Engines, etc.," exhibited at the late Mechanics' Fair; and now, sirs, I ask the privilege of sending another growl, through the medium of your valuable journal, at the *Scientific American*. I see, in a late number of that paper, what purports to be "a simple rule for constructing cone pulleys," signed "H. Mechanic." Now, I like simple rules, but this pleases me too well, for it is so simple that it wout "fill the bill." H. Mechnnic's simple rule is to add together the diameters of one pair of pulleys in the cones, nnd make the two pulleys of each of the other pair so that the sum of their diameters will be equal to the sum of the diameters of the first pair, without any regard to the difference in the size of the pulleys formiug the pair.

That is, if one pair of pulleys in the cone should be each twelve inches in diameter, then the sum of their diameters is twenty-four inches; nnd if there is to he another pair so proportioned as to give one shaft three revolutions to the other shaft's one, and being coae pulleys, of course to run with the same length of belt that rims the pair of equal diameters, one pulley (according to H. Mechanics' simple rule) must he six inches in diameter and the other eighteen inches, which, being added together, equals twenty-four iaches, the diameters of the two first. That principle, Mr. Mechauic, woat do; and in showing you why it won't do, I will try and do it in such a way that any mechaaic will see the principle involved, and will then be able to construct his cone pulleys without the aid of simple rules.

Suppose the shafts on which the cone pulleys are to be placed are ten feet apart, from center to center, and suppose that one pair of pulleys in the cone are to be equal, so that when the belt is on them the shafts will make an equnl number of revolutions, and suppose the diameter of these two pulleys to be six feet each (in this illustration I will leave out the exact measurement in fractions of a foot, or inches, to avoid confusion, as the sizes are only introduced to explain the principle, nor will I make any allowance for the sag of the helt). Then, a helt to run these two must be thirty-eight feet ten inches—that is, twice the distance between the shafts, which are ten feet apart, and half the circumference of the two pulleys, which is eighteen feet ten inches, making thirty-eight feet ten inches length of belt reqnired. Now, suppose, nnother pair in these same cones are to be so proportioned that, while one shaft makes one revolution, the other must make eleven. Now, if we make one of the pulleys one foot in diameter, and the other eleven feet, we will have the required proportion of size between the two; but will the same belt, which fits the first pair, do for this pair also? certainly not, if they are made as above indicated; for it will require two feet more of belt for the last pair than for the first; for the difference in the length of belt must be just twice the difference between the long base and the hypothenuse of a right angle triangle, the long base of which is ten feet nnd the short base or perpendicular is five feet; so we find that our belt is too short by more than two feet. But lengthening of the belt is not the remedy, for then it would be too long to fit the other pulleys, the size of which is already fixed. The remedy is in reducing the size of the last pair, which reduction must be just sufficient to allow the belt to fit, taking care to reduce each pulley in the proper proportion, so that in size they may remain to each other as one to eleven—taking eleven inches from the larger for each inch taken from the smaller.

In this case, as our belt is too short by a little more than twenty-four inches, we must reduce the circumference of the small puller by a little more than four inches, and that of the large pulley, that matches it, by a little more than forty-four inches, still leaving the proportion as one to eleven, making the belt thirty-eight feet ten inches long fit both pair of pulleys. Should other pairs of pulleys be in the cones, the same principles apply; that is, Mr. Practical Mechanic, after getting the sizes of all your pulleys in the cones (according to H. Mechanic's rule), first find the length of belt required for the pulleys nearest even, and then find how much too short it is for each of the other pairs and reduce their sizes to fit, without changing their relative proportion. That is, if one pulley is three times as large as its mate, then take three times as much off of it as off of its mate, and so on. The exact length of belt and size of pulley may be found either by calculatioa, or what is far better in ordinary practice, by a diagram and measurement on a board, table, or floor, and the same as you would get the length and pattern for a rafter or brace, viz: mark the distance apart of your shafts, then scribe out the size of each pair of pulleys in the cones, then find the length of belt required on the pair nearest of a size, and reduce the sizes of the others so that the same belt will fit them all, and your work will be sure to be right when finished, which is more than can be said for most cone pulleys.

T. McA.

Reply to Mr. Gabb.

SHASTA, Nov. 30th, 1864.

MESSRS. EDITORS:—In your issue of November 26th, I am accused by Mr. W. M. Gabb, of replying to his opinions which you published some time ago, in an indignant manner. If correcting a man's false impressions and erroneous opinions, by telling him the truth and showing wherein he is in error, can be construed into anything that is indignant and disrespectful, I must plead guilty. My only design, however, was to correct the false impressions and statements published, which, if not contradited would have a teadency to injure the just reputation of Pueblo district. It would appear as though either Mr. Gabb or myself, do not understand the first principles of Geology, or the nature of the rocks and ledges which form the Pueblo mountains. As we differ in our opinions, he regrets that our views should be so much at variance, nnd, to justify himself he says, "I saw all that I could, or nt least enough of the mountain."

By this, I presume, he means he saw all that he wanted to at a distance, and this, by visiting one or two ledges of the hundreds that were exposed on the mountain, was enough, in his opinion, on which to form correct views and publish true statements of the value and extent of Pueblo district.

In the first place, he should have denied my statements of facts, to make his reply more plausible; but he did not, and only evaded the question at issue, by asserting that not having seen any of the gold bearing rock, it is only fair to suppose that it must have been discovered since his visit. Let me assure him, positively, that it was not discovered since his visit. Mr. Gabb did see the rock which was gold-bearing, for I went down to the chloride series with him, in company with another geologist of Col. Drew's expedition, and two other gentlemen. This fact I stated in my former article which he did not deny.

Here let me also assure Mr. Gabb that the ore sent to San Francisco last month, was taken out of the very identical hole from the ledge on the chloride series we visited together, and from which he carried away rich specimens. It is a fair conclusion then, that he did not test the rock at all; for the rock was tested there by a Mr. S. Willey, n metallurgist, who was in company with the expedition, and who, after making many assays from different ledges, from one end of the mountain to the other, pronounced Pueblo mountain to be the richest in minerals, from its croppings, that he had ever seen. Then this controversy resolves itself into one of two things; he either was idle and did not endeavor, by experiments, to inform himself, and mistook his calling, or else he ingenuously misrepresented Pueblo district. This conclusion is fair and irresistible. For further proof of my assertions I will refer Mr. Gabb to Gabriel Zwicky, Secretary of the Pueblo Mill and Mining Company, nt No. 304 Montgomery street, who acted as agent for our company and advanced $123 per ton on the rock which was shipped to Europe. Does this look as though the amount of silver and gold is so small that the Pueblo district is practically valueless for the present? After all, with what I have said with accompanying proofs, he still sticks to it, and reiterates his opinion heretofore expressed, as to the apparent value of the district. How true it is that when you—

> "Convince a person against his will,
> And he's of the same opinion still."

In concluding his epistle, he replies to my communication in n very sarcastic manner, saying that Mr. Godfrey should certainly be more familiar with the region than myself; but since he is the reputed owner of several thousand feet, I leave it to yourself whether or not his opinion should not be taken "*cum grano salis*," by which I presume he means—taken for what it is worth. As I do not pretend to be a Latin scholar, in reply, I will say, I am the reputed owner of only four claims by location, and one by purchase, and have never offered any for sale. In conclusion, I will only add, that if Mr. Gabb was as familiar with geology as he pretends to be with the Latin language, he never would have advanced such an opinion without first knowing the certainty whereof he speaks, and giving the reasons for the faith that is in him in regard to the matter.

GROVE K. GODFREY.

VIRGINIA CITY CORRESPONDENCE.

BY A SPECIAL CONTRIBUTOR.

EDITORS MINING AND SCIENTIFIC PRESS:—Since writing my last letter, we have had a heavy fall of snow, causing for a short time an almost total suspension of business. The roads have been nearly impassable, and for a few days some of our principal mines were obliged to stop work, owing to the impossibility of hauling away the ore. But the snow is nearly all gone now, and ere this reaches you, all will be merrily at work again. We, in Nevada, are well content to suffer a little temporary inconvenience when we think of the effect that the rains will have in California. Their importance to that State cannot be over estimated, and the good effects which will spring therefrom in the increased production of the mines, and the certainty of a prosperous season for the agricultural class, and the stimulus which will be given to business in general, cannot fail to re-act very beneficially upon our mining interests.

With respect to mining developments there is very little to notice. The Savage company continues to raise from 150 to 200 tons per day. The Challar is raising about 150 tons per day, of an average assay value of about $60. A breakage in the pumping machinery at the Ophir, set them back a little, in the work of draining the mine, but they are now at work again. At the Sierra Nevada they are commencing to drift north on a seam of promising quartz, and there is every probability of success attending their investigations in that direction.

The decision of Judge Mesick in the case of the Potosi Company *vs.* Bajazet was delivered last Saturday. By the following paragraph from the Sacramento *Union*, it would appear to have been made known to some parties before it was rendered:

"NEWS IN ADVANCE.—A decision was rendered on Saturday afternoon in Nevada by Judge Mesick, in the Potosi *vs.* Bajazet. The import of the decision seemed to have reached this city before it was rendered on the Eastern slope, as on Friday afternoon, and Saturday morning, Bajazet stock rose from ten to fifty dollars per share."

As the decision is being reconsidered in the District Court before Judge Burbank, I will refrain nt present from making any remarks upon it, and would merely observe that if the facts above refered to are correct, they demand the strictest investigation. By the dullness which has purvaded the share market in San Francisco, during the past week, and the depreciation in most of the leading stocks, which has taken place, I am led to infer that confidence has been considerably shaken by this inaugural act of Judge Mesick. I only hope that I shall not have to take back an expression I made use of in my last letter—"an irreproachable judiciary."

Immediately on the decision being rendered, both companies started to work, but on the Monday morning, a cave of n wall built in a most slovenly manner by the Challar company, completely destroyed the engine house of the Potosi. The engine and boiler fortunately escaped uninjured and before this is in type, they will be running again. Meanwhile, McKay has diverted himself by restraining the Bajazet company from hauling away any ore, and has turned the tables on them completely.

I was very much amused with the letter of your correspondent, F. A. H. on the "Formation of Metallic Veins," which appeared in your columns a week or two ago. I have neither time or inclination to follow him in all his airy flights through the book of Genesis, nnd the Stocktonian hallucinations of O. W. Easton, but I would respectfully recommend him to study some good work on Geology—say De la Beche—and learn therefrom something of the various forms in which mineral substances occur in nature, of which at present he appears to be in such total ignorance. Has he ever heard, I would ask him, of the isolated nodules of iron pyrites so common to the chalk formations; of shells, deer-horns, and plants, whose original component parts have been entirely replaced by ores of lead, copper, tin and iron; of abandoned mines in which, on being reopened after a long lapse of years, fresh deposits of minerals have been found "growing"—if I may use such a term—on the walls of the vein? When he can prove to my satisfaction that they are all due to igneous action, then I will believe in the igneous theory of the formation of metallic veins.

Virginia, Dec. 12th, 1864.

A NEW GUN METAL.—A letter in the London *Times* from a distingnished English metallurgist, gives some interesting particulars respecting the new gun metal, lately invented in Austria by Baron von Rosthorn. The new alloy, which has received the name of "sterrometal," from a Greek word signifying tough or firm, is composed of copper, spelter, iron, and tin, in proportions that may be slightly varied without much affecting the result. In color it resembles brass rather than gun metal; it is very close in its grain and free from porosity. It is possessed of considerable hardness and will take a very fine polish. Several eminent Vienna engineers have tried it for the cylinders of hydraulic presses with great success. The writer gives it as his opinion that the days of wrought iron are numbered, and that its place will be soon supplied by steel in some form or other.

MORE DISCOVERIES OF PRECIOUS METALS.—New discoveries of gold and silver-bearing quartz have been made on the western slope of the Cascade range, some forty or fifty miles from Olympia, and the Washington *Democrat* states that the wildest excitement exists among the people of Puget Sound in consequence.

Commissions on Mining Shares.

Sale at 1 dollar up to 10 dollars	$0 25 per foot
Sale at 10 dollars up to 25 dollars	50 per foot
Sale at 25 dollars up to 50 dollars	1 00 per foot
Sale at 50 dollars up to 100 dollars	1 50 per foot
Sale at 100 dollars up to 200 dollars	2 50 per foot
Sale at 200 dollars up to 400 dollars	5 00 per foot
Sale at 400 dollars up to 600 dollars	6 00 per foot
Sale at 600 dollars up to 800 dollars	7 50 per foot

From $800 to $3,000 per foot, one per cent, on the amount of purchase or sale.

Anything above $3,000 per foot, three-quarters of one per cent. on the amount of purchase or sale.

J. B. E. CAVALLIER, President.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, Dec. 17, 1864.

The mining share market has exhibited considerable vitality this week, and all leading stock are in request, at enhanced rates. The short interest has been feebly sustained, owing to the readiness with which seller's option contracts were taken, and there are now more buyers in the market than sellers. Washoe advices received the past few days are of a more favorable character than were anticipated by some. All first-class mines continue to look extremely well, and the appreheusions felt with regard to the roads have not been realized, and are not likely to be. Little or no difficulty has, thus far, been met with in hauling ore to the mills, and the aggregate yield for the current month will probably exceed that of any previous like period since June last. These tangible results must have some influence upon the market, and will serve to dispel the illusions of those who were anticipating light receipts of bullion, and a consequent decline in the market value of all stocks.

The aggregate receipts of treasure in this city, from all sources, since the 1st inst., amounted to some $3,500,000, including about $1,000,000 from the Northern coast. The product of the precious metals is largely in excess of the first half of preceding months. During the past week the receipts have been about $1,000,000.

Bullion is plentiful, and gold bars are offered to bankers at 800@810. Silver is unchanged, and rules at ½ ₱ cent. premium to 2 ₱ cent. discount for round lots. Selected bars, however, range higher.

The demand for loans continues fair; but money is plentiful, and no appearance of pressure is apparent. The prevailing rate in bank is 1½ ₱ cent. premium on prime collateral. In the open market, good, but less desirable, securities are taken at 2@3 ₱ cent.

Legal Tender Notes have been very active, and $159,000 were dealt in, opening at 44c, seller 30, advancing to 47c, receding to 45c, at 30 days, then selling at 46c cash, and closing at 44¾, seller 30. The latest telegraphic advices from the East quote gold in New York, on the 16th inst., at 234.

City stocks and bonds are steady, and, for the most part, well held. 62 ₱ cent. is bid for Spring Valley Water Co., and 48½ for San Francisco City Water Co. California Steam Navigation Co. is in request at 75 ($750 per share). State Telegraph is offered at 40, and North San Francisco Homestead was sold at $40.

Savage is in more favor and advanced from $1,550 to $1,650, within which range 7 feet were sold. In the prospecting shaft, sunk some 85 feet below the lower working level, good ore was met with recently and in drifting toward the line of the Hale & Norcross a larger body of ore has been disclosed. There is no diminution in the receipts of bullion from the mine.

Gould & Curry has also improved, and 66 feet were sold, declining from $1,400 to $1,360, seller 60, then steadily advancing to $1,475 and closing yesterday at $1,495. The management of this company's affairs, both here and in Nevada, seems to give entire satisfaction to most stockholders and many of them desire a continuance of the present policy. Their mill is now working admirably, and the average cost of the reduction of some 2600 tons of ore and 300 tons of tailings last month, at this establishment, did not exceed $11½ per ton. It is believed that the present treatment of ore also results in saving more metal than formerly. Nearly a full winter's supply of wood, quicksilver, castings and other materials have been accumulated and paid for out of the surplus earnings of the past two months.

Chollar advanced from $940 to $1,000, buyer 30, receded to $950, seller 30, then advanced to $1,000 cash and $1,025, buyer 30, and closed at about $1,000. From the 1st to the 10th inst. 1530 tons of ore was delivered to the different mills, and this week the average product of the mine amounts to 200 tons per day. The lode in the south mine is said to have attained a length of 178 feet and is now nearly 50 feet wide, 35 of which contains good ore worth some $50 per ton.

Yellow Jacket is in rather fair request and small sales have been made at $850@835. This company are giving regular employment to a number of mills and the yield of last month amounted to $70,000. The mine continues to look well and preparations are being made to increase its productiveness.

Potosi has rallied materially, and 4 feet were sold advancing from $600 to $740. Upon an application to review the report of Referee Mesick, in the injunction suit of this company against the Bajazet, His Honor, Judge Burbank, decided to admit testimony as to "the delivery of the deed," and the argument is now being made by counsel.

Empire Mill and Mining Company is inactive, but well held at about $525 per share.

Hale & Norcross has fluctuated materially and 26 feet have changed hands, advancing from $289 to $325, receding to $275, and selling yesterday morning at $310. Drifting still continues to the east from the 545 foot level.

Ophir has been very active the past few days and 90 feet in all were sold, advancing from $385, seller 30, to $440, receding to $430 cash, and 415 at 30 days and closing at $420 asked. No new developments have taken place.

Uncle Sam has declined from $145 to $130, at which rates 28 feet were sold. It is said that efforts will be made by certain stockholders to annul the recent assessment of $100 per foot. Overman has been sold to the extent of 19 feet at $75@76.

Imperial has been in less favor and 195 shares were sold, declining from $122½ to $107½, rallying yesterday to $117. It is said that the changes lately made in the method of working this mine are less successful than were anticipated, and are likely to result in a diminished yield of good ore for 60 days hence.

Bullion declined from $148 to $119, rose to $125, buyer 30, and closed at $120, at which rates 373 shares have been sold.

Burning Moscow is still a speculative feature of the market, and 5,915 shares have been sold, at variable rates, advancing from $32 to $41, buyer 30, then selling at $39, seller 30, and $30, seller $60; again rallying to $47, cash, and steadily declining to about $35, closing at $38.

Nevada (J. G.) is in less request, and 165 shares were dealt in, declining from $46 to $35. Baltic has fallen from $25 to $22.

Wide West is lower, and 120 feet were sold, at from $12 to $9@9½. Daney was sold at $22, and Sierra Nevada at $25.

Bajazet and Golden Era fell from $36 to about $20; Golden Age and Empire dropped from $15 to $11; Buckeye was sold at $3½; Lady Bryan at $5½@6, and De Soto nt $5@6½.

Sbeba declined from $12½ to $8; Burnside advanced to $6½@7; Rhodes Diggings was sold at $5, and Harmon at $4.

The aggregate sales of stocks and Legal Tender Notes have amounted to $593,782.50.

[Written for the Mining and Scientific Press.]

NEW YORK CORRESPONDENCE.

BY FRANK WARDELL.

NEW YORK, Nov. 10th, 1864.

EDITORS MINING AND SCIENTIFIC PRESS:—We have just passed through a most exciting political campaign, and we now breathe free. The Presidential election is over, and no matter what might have been the private political opinion as to the merits of the two candidates in question, they cannot but consider the final results a decided triumph of the Union party. Many predictions were current as to the serious disturbances to take place here. The city was to be fired, our streets were to be covered with blood, and such like reports were all the rage. Thanks be to Divine Providence that such was not our fate. The election passed off peaceably and unusually orderly, and, it is justly said, mainly because both parties were convinced that the greatest injury that could occur to either would be the evidence that either had been the first to resort to violence on this occasion. What is this but a recognition that our people will sustain order, and that any party perpetrating a wrong is sure to be the loser by the act? Here, whatever force was at hand was carefully hidden from sight—its display being very properly considered an insult to the people, who have fully proved themselves worthy of the elective franchise. In Europe, order would have been maintained by an ostentatious display of civil and military force. It will not do for us to "cry down" or talk disparingly respecting the failure of Republican institutions. Whatever evils have accompanied them are the consequences of the improper manner in which they have been administered, and not of the principles on which they are based. They have been shown to be stronger than any despotism, even under the very circumstances in which they were expected to prove weakest. In the midst of war—and that the most awful and trying, a civil war—no government could have carried on the terrible contest of the past four years that was not sustained by a people who felt and acted on the conviction that the struggle was *theirs*, and not that of the Administration or the Government. Europe, thank heaven, has received a new lesson, which she will not soon forget. The curtain now falls; the political drama has been acted, and the acknowledged "stars" of the occasion are Uncle Abe and Brother Johnson.

THE GOLD MARKET.

Gold operators are acting more like so many maniacs than anything else you can well compare them to. The fluctuations are so great, and thus the excitement so high, that one half the time they do not know whether they stand on their feet or their heads. You can well imagine them rushing about, eyes half out of their heads, hats thrown back, and all their conversation on gold, gold, gold! It reminds me more of our old "shining times" in 'Frisco, on a tight steamer day, with money to raise to meet our obligations, and only half an hour to do it in before the bank close. Those were the times that "tried men's souls," and which showed what kind of endurance you were composed of. Stocks have been largely dealt in lately, and if holders have been firm they can not have helped making considerable money. There is a rumor to the effect that a movement is on foot to protect the people from speculators. I give the following as it comes from Washington, under date of the 9th inst. How much truth there is contained in it remains to be seen:—

"The Government has determined to use the influence at its command to protect the people from the exorbitant prices of commodities occasioned by the extravagant price of gold. This action was determined upon some time ago, but it was not to be put in operation until immediately after the Presidential election, There are various ways by which this result can be brought about, and all of them are to be employed. Within a few days the Assistant Treasurer for New York has been in consultation with the department, upon the subject. It is now understood that, in addition to the other means at his disposal, the Secretary of the Treasury is ready to announce that the Treasury will supply to the commercial community all the gold needed for strictly commercial purposes at a premium of only 50 per cent., which will reduce the price of gold to 150 instead of 550, as it now is. The Treasury is abundantly able to do this. There is on hand, over and above the amount needed to pay the twelve millions of interest in gold accruing next week, more than sufficient to meet all the demands of commerce for the next four or six weeks, and the intention of the authorities is to break down the excessive premium to which speculators have pushed this commodity."

Government securities are strong, at an advance, and foreign exchange is firm, in sympathy, of course, with the gold market—gold to-day (November 10th) being 260. The prime reason of its prospective further advance, however, is based upon the great Presidential result, which leads the majority of those who are capable of influencing the gold market to look for a long continuance of the financial policy which has so long degraded the value of the currency of the country to less than thirty-nine cents on the dollar. So it is said by those who make pretensions of knowing.

AMERICAN SHODDY SNOBBERY.

The people who now essay to lead the fashion in this country indulge in many very foolish things, that make the sensible grieve. To give you Californians a little idea, we will take, for instance, what was to be seen at the Academy of Music, the other evening, during an operatic entertainment. We were quite startled by the appearance of some of the ladies *en grande toilette*. As in duty bound, we took it for granted that there was abundance behind the little transparent curtains which so many of them wore over their faces, though it is possible that we might have changed our opinion if the "illusion" had been removed. One fair demoiselle, who sat near us, sported a profusion of powder. Her hair, in front, was arranged in three ridges, and looked as if it had just come out of a flour bin. There were several other female heads in the house that were dressed and dusted in the same style. We have rarely seen more finery in any place of amusement. There was plenty of glare, but very few evidences of taste. Violent colors, violently contrasted, pained the eye. One might have thought that no inconsiderable portion of the audience had been *dressed by contract*, their costumes were so glaringly alike. Shoddy never came out stronger than on the evening in question. But if you want to see that element of society in its glory, go to Central Park. Its "fire new" liveries, its glossy steeds, its flashy carriages, ornamented with with fancy coats-of-arms, made to order, its Tittlebat-Titmouses in "nobby" attire, and its elaborately bedecked ladies of *ton*, are to be seen there every sunshiny afternoon in full flare. How many soldiers must have been badly equipped, how many spavined horses palmed off on Uncle Sam, and what lots of plundering done, to pay for the gaudy show.

NEW BOARD OF BROKERS.

There is much serious talk going the rounds about the organizing of a new Board of Brokers in this city. It will be composed mostly of Californians, and if the idea is only carried out, it will prove a great benefit to Californians now here operating in stocks. The starters of the project are some of our leading and wealthiest New York and California men. It is about time, I should say, that such a place as California had a Board in a city like this to represent her richness.

THE WEATHER.

The weather during the past four weeks has been perfectly delightful, with the exception of the past three days, which has been rainy and terribly disagreeable. I glean from your papers that you would not object to the rain that has been pouring down here in torrents lately.

BUSINESS

May be termed quiet, and merchants are in hopes, now the election is over, more confidence will be felt in the community, a more cheerful spirit pervade, and trade revive. It is to be hoped so, at least, for, take it all in all, times have been "blue" indeed, and it is with the utmost difficulty that many merchants have been able to carry their heavy stocks of goods.

W. T. COLEMAN AND CALIFORNIANS IN NEW YORK.

Californians, as a general thing, are greatly surprised at the recent action of Wm. T. Coleman during the campaign in your city, and, taking into consideration the different remarks I have heard from time to time, they do not look upon that gentleman in any too favorable a light. I must say, for a merchant holding the position in the community he has heretofore sustained, he acted most unwisely in mixing himself up in politics to such an extent as he did.

A NEW CRUSHING MILL.

We have just been presented, by the owners of this invention, Messrs. McAuley & Wheeler with a tracing on cloth, from a working drawing of a model mill, constructed by them for working the blue gravel or auriferous cement which is found in such abundance underlying the hydraulic mines of California, and which, until quite recently has been but little worked on account of the difficulty of separating the gold from its matrix of conglomerate cement. This mill appears to be quite a novelty in itself, and is evidently the result, of no small degree of mechanical ingenuity, assisted by large experience in the working of mills and construction and practical working of machinery, perfected by careful thought and study. For, although there is less machinery in it than we ever saw before in a mill of the same capacity, it performs (automatically) all the work, without assistance or scarcely attention from man after being once started and regulated.

The workman in the mine has only to hitch the loaded car to the rope, and give a slight pull on another rope, or, wire which runs from the mine up into the mill by which the hoisting gear is thrown into connection, when the loaded car is drawn up the incline into the mill, where it dumps itself, at the same time throwing the hoisting apparatus out of gear, which allows the emptied car to right itself and run down the incline into the mine, taking the end of the hoisting rope along with it, by which it is regulated in its descent.

The dirt, and, rock, when dumped from the car, falls into a bin with slanting bottom, which carries it into a feed hopper and by which it is gradually and regularly fed into a crushing machine, into which there is also admitted a sufficient quantity of water, taken from the discharge of the water wheel, it being set high enough for the purpose.

The crushed rock and sand, mixed with the water, is conveyed from the crushing machine into the mortars, by means of a sluice, which at the same time separates the freed particles of gold from the dirt and obviates the necessity of stamping it with the rock. The pulp is stamped in the mortar until it is fine enough to escape through screens, similar to wet crushing of quartz, after which it is passed, with an additional quantity of water, through another series of sluices and riffles, and thus discharged from the mill completely worked, and the gold separated from it, without having been once re-handled after being loaded into the car in the mine.

This same plan of mill only requires the addition of the necessary settling vats and amalgamating pans in place of the sluices and riffles to make it a first class quartz mill complete in every particular.

In addition to the general plan of the mill, which appears to be arranged with regard to convenience of working, as well as economy in building, machinery and power, we notice, among the improvements of details (in addition to the water wheel,) a self-dumping car, automaton hoisting gear, and crushing machine; apparently small, but nevertheless important improvements, as mill men will at once see.

There are two improvements in the details of the batteries; the one is, mortising through the wooden guides, or boxes in which the stamp stems slide, and filling the mortises with a block of wood so as to present the end of the timber for the stem to slide against on all sides, instead of but two sides, as in the case in the common block. The other is in the form of the shoe of the stamp, which is so nearly like the old shoe, that it fits the same socket in the stamp, but the face instead of being flat, or as it frequently becomes in wearing, concave, is in shape like the penes of two sledges or stone hammers crossing each other at the center. The advantages of this arrangement are two fold. First—It gives a far better casting; the metal being more homogenous, closer grained, harder and tougher than when cast in a cylindrical or cube form like the common shoe. The other advantage is in the penc-shape of the face, which not only wears better than the flat face, but delivers a more crushing blow on the rock, as is pretty well understood by miners who have had to break many boulders with a sledge, or who have crushed much quartz or gravel cement in a common hand mortar. A broad, flat faced pestle, always having a tendency to pack the rock in a solid mass under the center of the pestle, while a narrow convex, (or better still) diamond or pene-faced pestle loosens the mass, and the same labor accomplishes more work. This form of shoe, with the revolving stamps, (as now used in nearly all mills) should have the same effect, as in the face of the hand pestle, especially as it gives a better quality of material in the shoe itself; but this form of shoe would be objectionable in a stamp, having a square stem so as not to revolve.

The plan exhibited for our inspection was for a mill with two mortars and ten stamps, with the crushing machine, which is designed to reduce the rock and cement to about the size of grains of corn and wheat, thereby doing an amount of work equal to ten more stamps, making the capacity of the mill equal to twenty stamps. The amount of water required to drive all the machinery about the mill, in localities where water can be had at a hight of 230 feet. (which is not unusual, from ditches, supplying hydraulic mines with water) will not exceed twenty-five inches, "miners' measure," which, at the present water rates in most localities in this State, would not cost more than three dollars per day.

The plan of the mill, may be seen, by any one interested in such matters, by calling at the "Miners' Foundry" in this city, where, we understand, they are building the water wheels and other machinery for the mill complete, even to the smallest bolt required.

The machinery for each mill is accompanied with complete working drawings and bill of timbers for frame, so that mistakes in building or setting up the machinery are almost impossible.

A LEAD PIPE MANUFACTORY FOR SAN FRANCISCO.—The ship Young America, which arrived in this port a few days since, brought a complete set of machinery for the manufacture of lead pipe, sheet lead and shot. The machinery is consigned to our enterprising fellow-citizen, Thos. H. Selby, Esq., who will proceed immediately to establish in this city a manufactory for the above purpose. The entire cost of the enterprise will reach about $100,000, and it is intended that the enterprise shall be second to none of its kind in the Eastern States. The machinery is all of the latest and most approved patterns, and has been made for this especial purpose under the immediate direction of Peter Naylor, the New York partner of Mr. Selby, a gentleman who has for many years been connected with one of the most extensive works of this kind on the continent. Thus, one by one, the enterprising citizens of San Francisco are introducing into our midst all the various trades and manufactures which are soon to make us independent of the world in all the essential requisites of mechanical and manufacturing industry.

EFFECT OF ATMOSPHERIC PRESSURE IN GUNNERY.—The French artillerists in Mexico have recently found, to their surprise, that the angle of elevation used in France for their guns, for any given range, does not afford the calculated results; and have ascertained that this is owing to the diminished pressure of the atmosphere on the Mexican plateau. It follows that cannon may serve as a kind of barometer for measuring altitudes.

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for Inventors can secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the Mining and Scientific Press, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

San Francisco:
Saturday Morning, Dec. 17, 1864.

THE RIVOT PROCESS.

BY G. DEETKEN.

In answer to frequent inquiries, a short review of the above process will be furnished, as far as the writer is informed of it. The process consists in a peculiar roasting operation whereby the gold and silver are converted into the metallic state and prepared for a successful pan or barrel amalgamation.

Mr. Rivot claims according to our information, to extract *all the gold and silver* from the most refractory as well as more docile ores.

The ore has to contain a certain amount of iron pyrites varying with its value, on the average about 30 per cent. If the required quantity is not present in the ore, it has to be added. The roasting is carried on in a common reverberatory furnace so constructed that the flame cannot touch the ore in its passage from the fire-bridge to the flues. A high fire-bridge, arch and flues are therefore essential conditions of the furnace. The arch is about thirty inches or more above the hearth which is 8 x 13 feet in size. The flame is also prevented from touching the ore by the introduction of a copious supply of steam of about 14 lbs pressure per square inch, near the fire-bridge and through pipes, passing through the arch.

The steam is partly decomposed, at the temperature existing in the roasting chamber of the furnace, into its elements, hydrogen and oxygen, the first of which combines with the sulphur of the sulphuret, forming sulphureted hydrogen, and the latter with its metal, forming oxydes. If the metals, as silver and gold, have only a slight or no affinity for oxygen, they remain in the metallic state. The sulphurous acid formed by the contact of the oxydes with the undecomposed sulphurets re-acts partly upon the sulphureted hydrogen, forming steam again and volatile sulphur. Metallic sulphurets of a higher grade, as sulphurets of iron and copper, lose a part of their sulphur unoxydized. Sulphuret of arsenic and antimony form volatile oxy-sulphurets.

It has to be borne in mind, however, that the air has to be completely excluded from the ore in order to avoid the formation of sulphates, a condition which is necessary, according to the express statement of Mr. Rivot, to procure a perfect amalgamation.

In reviewing the process two things strike us as novel :—1st. The use of sulphurets of iron in a *roasting process with steam, and the exclusion of air*. 2d. The *peculiar mode of introduction* of steam into the furnace, forming a protection against the access of air to the ore while the heat is directly applied to it.

In regard to the first point, sulphuret or sulphate of iron is added in a chlorating roasting, to decompose the salt—at Freiberg about 20 per cent. In Ziervogel's liquation process, they transform the arseniate and antimonate of silver, formed in roasting, into a soluble sulphate; but in a roasting operation with steam and exclusion of air, the addition of iron pyrites is certainly a novelty, nor is it easy to see in what manner the sulphuret of iron should facilitate the conversion of silver ore into metallic silver, as, according to Mr. Rivot's statements, neither sulphate, arseniate or antimonate of silver is formed in a correct application of his process.

In regard to the second point it is plain, that the direct application of a radiating heat suggested itself—as a muffle furnace, best adapted to this process would consume a greater amount of fuel. The air is perhaps effectually excluded from the ore by the steam used in considerable quantity. The roasting process itself, as far as the use of steam with exclusion of air is concerned, is no novelty; having been successfully applied by Cumenge and Patera on antimonial ores, whereby the silver ore was converted into metallic silver with but slight or no loss.

See: Ann. d. min. 5 ser. I. 425. Berg & h. Ztg. 1853. p. 561 to 580; Berg & h. Ztg. 1855. p. 82 to 131.

A condensing chamber, attached to the furnace, collects the precious metals carried off by the draft. Whether or no the silver found in the metallic state after such a roasting operation is in a condition to amalgamate as well or better than the chloride of silver, formed in a chlorating roasting, is a question of experience.

The writer could never arrive at a successful pan amalgamation of free gold, resulting from a roasting operation of sulphurets and arseniurets. Unless the state of the roasted sulphuret or arseniuret which, after "Rivot's" manipulation is a black magnetic mass—the usual roasting leaves it in the form of a red oxyde—has a favorable influence on the amalgamation, no good results can be expected on gold bearing ores.

In conclusion, we will sum up the disadvantages as well as the advantage of the process. Its disadvantages are :—

1. Slow progress of the roasting and consequent large consumption of wood.

2. Difficulty of procuring the required amount of iron pyrites if not contained in the ore.

On the other side, we have a slight loss of precious metals in the roasting, (the subsequent loss in amalgamation has to be considered however.)

Honor to whom Honor is due.

Editors Mining and Scientific Press :—In the *Scientific American* of October 29th, is an article headed "A Practical Ice Making Machine," in which it is stated that, at a meeting of the British Association, a certain M. A. C. Kirk said, that being requested in 1862, to find a substitute for either in the making of ice, "atmospheric air being the substitute which at once suggested itself, I commenced a series of experiments, etc.," and Professor Miller said, "the inventor had employed a new principle in a new * * * manner."

Ures' Dictionary, an English publication, says, quoting from the *Mechanics' Magazine* of February, 1851, that Dr. Gorrie of New Orleans, "constructed an apparatus for producing so much cold as to freeze water by exposure to condensed air, in the act of its exhaustion," which is precisely the same principle, and process, as that of Mr. Kirk, and yet the idea of so applying condensed air, did not originate with Dr. Gorrie, but with Gay Lussac who did the same thing "many years ago."

Is it possible that Mr. Kirk, and Professor Miller, could be unacquainted with these facts, published as they were, in an English paper thirteen years ago?

Every month or two, we hear of some great "English Invention," which turns out to be nothing but a re-hash of some Yankee notion or other. In this case the merit of the inventor seems to consist, in having improved and applied the machine of Dr. Gorrie, who got the idea from Gay Lussac, and not in having "employed a new principle in a new manner."

C. A.

The California Art Union has rented the room over Jones, Wooll & Sutherland's, and are fitting it up at a cost of about $1,400. A California carpet has been ordered at the Mission Woolen Mills. An exhibition will soon take place, at which it is confidently expected the display of pictures will be creditable.

WHEELER & McAULEY'S HYDRAULIC PRESSURE WATER WHEEL.

This wheel, as its name implies, is worked by the pressure of water, and depends for its power more on the hight of head, than on the quantity of water, as in the overshot or the velocity as in the turbine. In this and many other respects, it differs widely from all other wheels heretofore used, being in principle identical with the Hydraulic Press or Hydrostatic Engine, except that its motion, instead of being reciprocating, as in the press or engine, is rotary and continuous, thereby avoiding the use of valves and driving or balance wheels.

The space occupied by a wheel sufficient to drive an ordinary quartz, flouring or saw mill, is about the same as that required for an ordinary run of mill stones in a flouring mill, and may be placed in any part of the mill most convenient, as the power is transmitted from the wheel through a vertical shaft.

The water is let into the wheel from an iron pipe under it and into the center or hub, where it divides and passes through hollow arms or pipes to opposite sides, on the circumference, where it acts on the principle of direct hydrostatic pressure against piston heads, attached to the wheel, and which revolve with the wheel, in an annular chamber completely surrounding the wheel.

The water, after entering the annular chamber and doing its work, is discharged through an opening in the rim of the wheel towards the center again, where it is received into a large pipe, through which or by means of an open sluice, it may be conveyed out of the mill or to such place as it may be required for other purposes.

By this peculiar arrangement and manner of using the water, the wheel is almost perfectly balanced; the pressure of the water under the wheel, counter-balancing the weight of wheel and shaft, and the pressure on opposite sides of the wheel at the same time balancing, so as to make no lateral or side pressure on the shaft except that due the strain of belt or gearing by which power is transmitted to the machinery.

As there are no valves to open and close, or complicated machinery to get out of order, and as the wheel may be run fast or slow, to suit the requirements of the other machinery in the mill, it promises to be the most economical water power yet invented, both as to the amount of water required to do the work and the amount of other machinery required in the mill.

The Hermetical Barrel.—We alluded, a few weeks ago, to an hermetical barrel, recently invented by Mr. L. S. Robbins, of New York City. We learn, from the *Mining Journal*, that some of these barrels have recently been filled with petroleum at the oil wells and forwarded, with other ordinary shipments, to the Erie freight depot, Jersey City, where they are now daily attracting the attention of merchants, shippers, and oil dealers. They are dry, clean, and odorless as ordinary flour barrels; they have not lost a particle of oil in their passage, while the shipment accompanying them have lost a large per cent. Another interesting feature of the hermetical barrel is, that the chemical treatment of the wood renders it incombustible, so that, being also hermetical, they can be shipped with ordinary packages. It is predicted that the commercial interests of the world will impel them, as a matter of safety and profit, to adopt the hermetical barrel. Millions of dollars per annum might be saved by a general introduction of this barrel. Its inventor has something better than either a gold or silver mine.

All Right.—The reports which had gained currency that the new iron clad Dictator, was a failure, by reason of miscalculation in her draft of water, etc., is pronounced by Capt. Ericksou, in a card, over his own signature, utterly without foundation. The Captain states in his card that the Dictator, after her launch, was found to draw *half an inch* less than was estimated by her projectors, while the Puritan varied only a *quarter of an inch* from the estimate! Pretty close calculation that.

[Written for the Mining and Scientific Press.]

The Rivot and Ryerson Processes.

Editors Press :—The Rivot and Ryerson processes, I understand, have, or claim to have, each of them, a patent granted by the United States. This, of course, gives them the right of doing a certain thing, provided nobody has known or done the same thing previously. As I intend to put up works and introduce such processes as will suit the nature of the ores that may be brought to me, it may happen that I may possibly use something which may be looked upon as an infringement on the respective claims of Messrs. Rivot and Ryerson; but, in order to avoid any controversy hereafter, I will explain for what the parties hold their patents, so far as I have been informed, and what has been known heretofore, and will then be able to judge of the validity of the perspective claims.

As to the Rivot process, I am informed that they claim a certain furnace, by which the fire is so arranged that the flame does not touch the ore on its passage to the chimney; and that, by the introduction of superheated steam, the ore gets so decomposed as either to volatilize the base metals or convert them into such oxyds as will not interfere with the amalgamation of the ore thereafter.

In the Ryerson process, it is claimed that the ore is sulphurized by the introduction of superheated steam in an iron vessel, or upstanding cylinder, and the quicksilver vaporized in contact with the ore, also by the same agent. This, I believe, is all that both parties claim as new.

I will now give you some facts of which the parties may not be aware. Some seventy years ago, Professor Trucks, of Bavaria, discovered that silicates were soluble in caustic ley under a high pressure of steam—say about four atmospheres. This is now no longer an experiment, but is carried on, in various parts of Europe, on a large scale, and this dissolved quartz is used, in a liquid state, as a fire-proof paint and for many other purposes. The largest factory of the kind is in Lille. About ten years ago, a Mr. Godfrey, of London, took out a patent for the desulphurizing of ores by superheated steam. Some years ago a Dr. Hardiuge, of New York, also took out a patent for a peculiarly constructed vessel, whereby superheated steam is introduced through a hollow shaft to the lower strata of the ore. Some six years ago, at my works on Bryant street, in this city, I erected a roasting furnace, which was arranged for the access or exclusion of air, whereby the flame could not touch the ore in the furnace, and the introduction of superheated steam, being precisely what the parties in the Rivot process now claim as new. The application of vaporized mercury was applied in Hungary some 100 or 150 years ago. If we further examine the works and experiments of Professor Plattner, we shall find that there is very little room left for new invention in this line. I may be mistaken in some portions of the above, and if so, Mr. Editor, I shall thank you or the parties interested for correcting me. Mosheimer.

Heavy Castings.—A channel plate for one of the largest frigate engines now being built for the Government was recently cast at the Foundry of Messrs. Woodruff & Beach, at Hartford, Conn. Twenty-six tons of metal were melted for the casting. Upwards of ninety tons were melted for the casting of the great Rodman gun at Pittsfield. The heaviest casting of which we have any account, if we mistake not, was the anvil-block for the great steam hammer of the Midland works, in Sheffield, England, which was cast last spring. It is said that 170 tons of iron were melted for that casting, and that the block when taken from the pit was found to weigh 160 tons. The time occupied in cooling, and before it could be taken from the pit, was *seven weeks*. The hammer itself weighs twenty-five tons.

The Legislature of the new State of Nevada met on Monday last, and are now actively engaged in attending to their Legislative duties.

HOME FINANCES.

Capital continues to flow in upon us from abroad, for investment in our mining and other stocks. The amount thus added to our available means during the past year has been larger than the public are aware of. The transfer of capital to this city from Eastern and foreign markets, for banking purposes, has also been considerable, and larger accessions will shortly be made. The agencies in this city of a number of foreign banking establishments are expanding their business, and making preparations to sharply compete with our home institutions and private bankers. No little rivalry has been evinced recently in certain quarters; but we regard this as beneficial, and likely to result to the advantage of all who are in need of banking facilities. Cheaper rates of interest, and an easy money market, are very much to be desired. We can hear of no pressing demand for money at this time, although a great many loans have been called in, and a general settlement is expected to take place before the year closes.

Stock collateral loans are still made, at 1½ @2 ₱ cent. per month, and good business paper (short time) can be readily negotiated, at former rates.

The receipts of treasure from the interior mining districts and Northern coast, since Friday last, have been unusually large, and amount to $1,550,000. Bullion was lower on last steamer day than for some time past, owing to the closing of the mint; and gold bars were sold at about 820, notwithstanding the rate in New York has recently been advanced to 940@950. Silver is unchanged, and is selling at from ½ ₱ cent. premium to 2½ ₱ cent. discount.

Currency bills on the Atlantic were sold on steamer day at 125 ₱ cent. premium on gold. The rate for telegraphic transfers was lowered to 3½ ₱ cent. premium, and sight drafts, payable in coin, were quotable at 2@2¼ ₱ cent. These quotations are ½@1 ₱ cent. lower than for six months past.

Legal Tender Notes have been well maintained during the week, at from 46½ to 47½, and closed at about 47. Latest advices from the East quote gold in New York at 236 on the 14th inst.

Astonishing Illegality of Mining Advertising.

The amount of mining corporation advertisements now being published in certain daily papers of this city in an illegal manner, and containing plain and gross violations of the recent Act concerning assessments of corporations, is really astonishing.

ADVERTISING IN SUPPLEMENTS has been decided by the Courts of the State of New York (after whose code the laws of California were framed,) as absolutely void; and we have the best of reasons for cautioning every prudent company against that class of advertising. Furthermore, there are continually numberless errors or discrepancies occurring, through MISAPPREHENSION OF THE LAW, on the part of advertisers.

We do not aim to raise unnecessary alarm, but simply perform our duty in admonishing parties interested against the storm of retribution, which is most surely awaiting the success of such companies as are now pursuing informal transactions, whether the same occur through carelessness, duplicity or ignorance.

The original bill for levying and collecting assessments, as first introduced before the last Legislature, we denounced as outrageous; as amended and passed, the Act is obnoxious and cumbersome to the mining community, and is rapidly preparing an enormous feast for the "legal fraternity" of this coast. Although very rigid, the law is no less specific in its main features, and when once minutely understood, its illiberal requisitions are very plain.

Correct blank forms for advertising, and any information desired by advertisers, will be furnished, gratuitously, at the office of the MINING AND SCIENTIFIC PRESS.

The waste made by servants in dust, ashes cinders and grease in N. York city, amounts it is said, to more than $1,000,000 annually.

EASTERN FINANCES.

By the steamer America, of the Nicaragua line, we are in the receipt of Eastern market advices to the 19th of November. At that date, the minimum rate for first class loans in New York was seven per cent. premium, but the circle of credit was so restricted by the fear of failures from the heavy decline in gold, that bank managers and money lenders were afraid to make loans. Rumors of some failures among merchants were current. The break-down in gold from 245@250 to about 215 had checked business of all kinds, and the near approach of the session of Congress and the general impression that the Government would do all in its power to induce rebellious states to return to their allegiance, seemed to make all operators and dealers very cautious about getting into debt for any thing, cheap as it may seem. The payment of the interest on the gold hearing public debt, falling due January 1st, was to be anticipated by the Government, and is officially advertized by the Treasury department and such holders of the bonds as choose to avail themselves of the option can do so immediately.

The exports of general produce and merchandise from the port of New York for the week ending Nov. 15th, compare as follows with previous returns:

	1862.	1863.	1864.
For the week.....	$ 3,750,451	$ 2,311,632	$ 3,628,161
Prev. Reported....	131,545,505	142,012,435	185,021,661
Since Jan. 1st.....	$135,3:8,956	$151,321,369	$188,949,822

The New York Imports compare as follows:

	1862.	1863.	1864.
Total for the week.	$ 2,111,177.	$ 3,208,784.	$ 3,222,274.
Prev. Reported....	151,247,967.	155,042,035.	189,868,408.
Since Jan. 1st.....	$152,359.144.	$158,250,819.	$193,095,979

Goverument securities were granted as follows, Nov. 18th.

Coupon Sixes of 1881	110¾.
Registered Sixes of 188	111.
Coupon Five Twenties	104.
Registered Five Twenties	103¾.
Registered 6s of 1868	117.
Coupon Ten Forties	96.
One Year Certificates	96½.

State bonds were registered as follows:

Missouri 6s	61.	North Carolina 6s	58.
Tennessee 6s	56.	California 7s	151.
Indiana 5s	87.	Ohio 6s	106.
Virginia 6s	45.	Michigan 6s	100.
Georgia 6s	65.	Louisiana 5s	65.

CHOLLAR SILVER MINING COMPANY.—The annual meeting of the above named company was held on the 7th inst., at which time the following named gentlemen were elected for the ensuing year as a Board of Directors: M. O. Hillyer, A. Linddner, A. T. Lawton, Capt. R. H. Pierson, and Robert Turner; Mr. A. K. P. Harmon was elected President, and Charles Hosmer, Vice President.

ELECTION OF OFFICERS.—At a meeting of the stockholders of the Evening Star Mining Co., held December 3d, 1864, the following officers were elected: President, I. H. Ham; Secretary, N. Duperu; Treasurer, W. W. Greenhood; Superintendent, Jno. McMurray; Trustees: W. W. Greenhood, I. H. Ham, T. Ellsworth, A. Block, H. Greenhood.

MINING CONTRACT.—By reference to our new advertising columns, it will be seen that the Secretary of the Rose Gold Mining Company is ready to receive proposals for taking out a lot of quartz from that claim, located in Gentry's Gulch, Mariposa county.

DEEP PLACER MINES IN AUSTRALIA.—It is now distinctly ascertained that in many parts of Australia, "leads" of "wash dirt," consisting of submerged river beds, exist hundreds of feet below the present surface of the earth, and many companies are now engaged in profitably working these extraordinary deposits.

MINING INCORPORATION.—The Rappahoe G. & S. M. Company filed its certificate of incorporation in this city, on Friday last. Its object is the working of mines in the district of Rosario, State of Sinaloa, Mexico. Capital stock, $525,000. Trustees—Wm. T. Coleman, Chas. H. Seymour, and H. F. Williams.

PERSONS sending papers to England, Scotland or Ireland should recollect that if two or more papers are put into one envelope they are charged letter postage on arriving at their destination. All papers should be placed in a single wrapper in accordance with the English postal law.

THE COPPER MINES OF NEVADA COUNTY.

There seems to have been of late quite a renewal of the interest in copper mining in Nevada county. A lot of 30 tons of ore, which was sent to Swansea for treatment, has recently been heard from. It yields $105 to the ton. Several other shipments have been made, from which returns are expected soon.

An interesting experiment was recently made of roasting some of the low grade of ores, at the Well lead. About twenty tons were submitted to the process. The ore was piled upon a wood heap, in the same manner as is practised in the burning of gold quartz. After the rock became thoroughly heated, the sulphur contained in the ore kept up the heat for nearly a month, reducing the entire weight of the mass one-half. The ore treated was about 7 per cent. of copper; it was raised to 14 per cent. by the roasting—a profitable operation. We understand that a similar plan of roasting has recently been practised, to some extent, at Copperopolis. We should be pleased to learn the particulars, and whether any results of practical value were obtained.

Operations on the Green Lead, near the Zinc House, which were suspended about a year ago, on account of water, will soon be renewed again, the proprietors having determined to put up a steam pump, and proceed to a thorough development of their mine. The Last Chance Company have resumed work again, and have a fine lead, about three feet in thickness. The Well Company are down about 125 feet. This company has probably the largest body of ore yet found in any mine in the State. We have the most abiding confidence that copper mining will yet become one of the leading mineral resources of our State. The result is merely a matter of time and energy. Capital is needed, and, though somewhat timid at present, will nevertheless soon be forthcoming.

MARBLE WORK.—John Daniel, of 408 Pine Street, has just completed a mammoth imposing stone for this office, three feet in width by nine feet in length. A superior imposing stone is an article of just pride with thorough printers, and this one furnished out of California marble, by our old advertiser, would be hard to beat.

THE GOLDEN GATE TREASURE.—The steamer Commodore, formerly running as a freight vessel to Sacramento, has sailed for Manzanillo, with a party fitted out by Thomas J. L. Smiley, to recover the remaining three hundred and fifty thousand dollars treasure of the Golden Gate. They have two of Harrison's steam pumps to clear the sand at the bottom away from the treasure, and as they know exactly, its location, expect to recover the whole of it. The claims of the Underwriters have been compromised, and this expedition goes with their consent.

A child, speaking of his home to a friend, was asked: "Where is your home?" Looking with loving eyes at his mother, he replied:—"Where mother is." Was ever question so beautifully, truthfully, or touchingly answered.

A regiment of soldiers passed through Covington, Kentucky, a few days since, the members of which were worth $1,500,000, when our currency was at par with gold. It was the One Hundred and Seventeenth United States (colored) Regiment.

MILL FOR OWEN'S RIVER.—The Concert Gold and Silver Mining Company, of Owensville, Owen's River Valley, lately shipped a fine ten-stamp quartz mill from San Francisco to their mine, via Aurora, Nevada—a long way around, but at present the shortest way home.

TO CORRESPONDENTS.—A communication with regard to the Potosi mine, from "O. W. F.," was received too late for insertion to-day. It will appear next week.

A young man, formerly of humble circumstances, has an income of $7,000 per day paid him as his share of certain oil lands in Pennsylvania. This amounts to $2,548,000 per annum.

A voter in Massachusetts recovered $8,000 from the Selectmen for refusing to put his name on the poll list.

In water, sound passes 4,708 feet in a second; in air, from 1,130 to 1,142.

For Secretaries' Reference.

Safe Rules for Advertising.

Make your order levying the assessment on any day EXCEPT FRIDAY, and advertise the Assessment Notice on the FIRST FOUR succeeding SATURDAYS, setting the day for delinquent advertising on the FIFTH SATURDAY, and the day of sale on the SEVENTH SATURDAY, or any day thereafter, PREVIOUS to the EIGHTH SATURDAY.

ADVERTISING IN THE INTERIOR.—If the mine or works of the corporation are located in any State or Territory of the United States, notice must be advertised there also, if a newspaper is published in the same county. On this account, SATURDAY is the best day on which to levy assessments, as thereby the longest period possible is gained for transmitting a copy to interior papers, which are usually published on Saturdays.

POSTPONEMENTS.—The date set for advertising delinquent stock, and the day of sale mentioned in either notice, may be *once* postponed for any period not to exceed ten days. Secretaries can avail themselves of this privilege when assessments are levied on Friday and they are obliged to advertise at the mine on Saturday, or desire to publish on that day at the place of incorporation.

ERRORS, OMISSIONS, OR DELAYS are definitely provided for in Section 14 of the new law, whereby it is plain that, if the advertising is delayed, the Secretary can only fix the dates for delinquent advertising and sale to suit the time he is to advertise, and proceed anew.

WHEN PAYABLE.—It is the usual custom to make the assessment "payable immediately," or upon some date within a day or two from the time of levying the assessment, although the law makes no requisition as to this matter.

BLANKS FURNISHED FREE to advertisers in the MINING AND SCIENTIFIC PRESS, for Assessment Notices, Delinquent Sales, Postponements, etc.; also copies of the Assessment Law of 1864. Copies of advertisements, for sending personal notice to shareholders, printed at $1 per hundred.

The PRESS is the most ECONOMICAL advertiser for stockholders, reliable and obliging for Trustees and Secretaries, and merits the patronage of the mining interests.

SWIFT STEAMER.—A little stern-wheel steamer, only 33 feet long, has been built to run between Hartford and Windsor, Conn., a distance of 17 miles, which distance is made in from 40 to 50 minutes. At this rate of speed, our Oakland steamers ought to make their trips from Market street wharf, in this city, to Broadway wharf, Oakland, in about 16 minutes. A line of boats that would make the trip in in 17 minutes would add 20 per cent. in value to all the real estate in Oakland.

PRICES OF PASSAGE.—The steamship Golden City, which left for Panama on Tuesday, took away $1,022,138. The prices of passage by this steamer were as follows: Upper saloon, $187; first cabin, $135; second cabin, $65 steerage, $48. The prices of the Opposition steamer, which sailed the day before, were: Upper saloon, $150; first cabin, $125; second cabin, $65; steerage, $45.

ORE SHIPMENTS.—The Golden City, which left on Tuesday last, took, for Liverpool, 41 sacks of silver ore, valued at $2,500. The ship Belvidere, which cleared on Friday last for Boston, took 27,033 sacks of copper ore, principally from the Union mine at Copperopolis.

THE FIRE ALARM TELEGRAPH.—The contractor for the erection of the San Francisco Fire Alarm Telegraph, Mr. Kennard, of New York, left on the steamer from New York on the 3d inst., for California, taking with him all the apparatus and material, so as to commence the work as soon as he arrives here.

IMMENSE STRUCTURE.—The Parisians are constructing an immense Opera House which, with its dependencies will cover eight acres of ground.

Mining Summary.

CALIFORNIA.

AMADOR.—The *Ledger* says that another quartz mill is soon to be erected in Columbia. The Kearsing brothers have purchased Dr. Pitt's lode and the lot of ground on which his house is located, and will at once commence the erection of a mill on it. There is an abundance of quartz in that vicinity that will pay prospectors good wages if they can only get the rock crushed at fair prices.

A couple of miners working on Walker's ranch, near Columbia, recently found a sack containing about forty pounds of sulphurets, from which they extracted about fifty dollars. The sulphurets had been stolen sometime ago by a Chinaman, from the Oncida Mill, and, being hotly pursued, he threw them away to make good his escape.

CALAVERAS.—The San Andreas *Register*, of the 3d inst., is informed that Rathgeb & Bros., a company of Frenchmen, who have been prospecting a gold-bearing quartz lode at Lower Calaveritas, about three miles from that place, for the last three years, have struck it rich, and that last week they sent below and purchased a ten-stamp quartz mill, which they are about to erect on their claim. They have a large amount of rock on hand, and will commence to crush it as soon as they can get their machinery in operation.

YUBA.—The Blue Gravel Company, at Smartsville, realized from the last clean up of their boxes $65,000 in retorted gold. These are undoubtedly the richest hydraulic claims in the State.

SHASTA.—According to the Shasta *Courier*, the Spring Creek mill cleaned up, for the first week of the present month, after a five days' run, with eight stamps, sixteen pounds of amalgam, worth $90 per pound, and amounting in the aggregate to $1,536—a little over $300 per day. This clearly proves that enterprise and energy alone are necessary to the development of the wealth of this county. There are hundreds of just as good lodes as those belonging to this mill, that might be worked with the same good success if men of means would but wake up to the fact that their money would be better invested in producing wealth to the community, as well as to themselves, than in the old way of bond and mortgage at 2 per cent. per month, which impoverished the borrower, and renders the lender sordid and miserly.

NEVADA.—Accounts from this old mining locality still continue favorable. The Lucky Company has proved itself literally a fountain of gold. Their late crushing of 600 tons was fully up to the previous average of $35 to the ton. The enormous value of this mine may be inferred from the fact that the rock can be taken out and crushed so as to leave a clear profit of fully $25 per ton. The vein is from three to eight feet in thickness, and has been developed for a distance of about 1,000 feet. The mine promises to prove one of the richest on the coast. It is owned by only seven men. They are "lucky" men indeed, and they deserve their success, for they have worked persevereingly on this ground for some eight or nine years, without any remuneration until the present season. If we are not mistaken, we visited the ground, in company with one of the proprietors, as early as the summer of 1855, about which time they commenced work upon their claim. We congratulate them upon their success. An incident in connection herewith occurs to us as we write. In the winter of 1851 we visited Grass Valley, when only two mills were running in that part of the State—a Stockton mill, on Gold Hill, and a Chili mill, on Union Hill. We were standing in the mill on Union Hill, and wishing we were one of the fortunate owners as we saw the sands, yellow with gold, which they took up from the mill and submitted to our inspection. Looking across the creek, our eyes resting upon the very spot where the Lucky Company have since started their tunnel, we suggested to the gentlemen with whom we were conversing that that (pointing to the locality) would be a good place to prospect, and hinted that we wouldn't mind taking hold of it with a small company. Our friend remarked that he had carefully examined the spot for "croppings," but could find none, and thought it would be labor lost. The consequence was that we, as we have done many a time since, "missed an opportunity," and left the valuable prize for the "Lucky" boys to unearth thirteen years later.

The Independent Company, who own the first extension adjoining the Lucky ground, are taking steps to incorporate, on the strength of the recent favorable developments. We understand they have struck the ledge. Their ground is already held at a high figure. Both of these companies also own, in addition to their ledges, what are supposed to be very rich hydraulic diggings, on the upper portion of their ground.

The Wisconsin ledge, some distance south of the town of Grass Valley, owned chiefly by Messrs. Loutzenheiser & McLaughlin, is now being worked, with great success. About 50 tons have recently been crushed, which yielded near $60 to the ton. The proprietors will put up a mill next Spring.

A promising ledge has been struck on the Grass Valley and Nevada road, near Multnnu's works.

Maguire & Co., who own the Washington claim, on Posy Ravine, about a mile from Rough & Ready, have just struck a ledge of valuable quartz, which, it is thought, will be of immense benefit to the company and of importance to the county.

A. A. and John Smith, of Rough & Ready, after prospecting their ledge and satisfying themselves of its value, have commenced the erection of a mill to work their rock and accommodate the owners of other mines in the district. The prospects around Rough & Ready were never brighter than now.

PLUMAS.—A correspondent of the *Alta* writes very encouragingly of the mines of Plumas county. The Indian Valley mine, he says, is hardly second to no other in the State. The company were offered $120,000 for their mine last Summer. He thinks it will soon pay 15 per cent. per month on that sum.

ESMERALDA.

The Del Monte Mill had been stopped a week, but is now running again.

The Crockett is taking out rock that will average $75 to the ton. The Superintendent says the company will soon put on twelve additional hands.

The Unadilla is yielding very rich rock. Sixty or seventy tons have been extracted, which were to be sent to the mill for crushing in a few days.

The Pride of the Eastern Slope, situated on Middle Hill, is yielding a splendid quality of rock. Work upon the lead, which had been suspended for some time, was resumed a few weeks since, and the prospects of the owners are said to be very flattering.

MONTGOMERY DISTRICT.—Great confidence is felt in the richness of the Montgomery district, and the miners are still flocking thither. Should the smelting works prove the success which is anticipated, it will soon be a lively camp. A paper called the *Pioneer*, has recently been started there. A piece of ore, taken by Judge Moore from one of his newly discovered leads in this district, assayed at the rate of $3,700 to the ton. The Judge informs the *Union* that the lead from which the specimen was taken is between six and seven feet in width, and that any amount of a similar quality of rock can be taken out.

Judging from the local reports, we should say that there was of late a decided increase in the activity of the mining interest in and around Aurora. Quite a number of miners have in contemplation the erection of hand quartz mills, after the manner of the Reese River miners. The Esmeralda *Union* states for the benefit of such, that quicksilver flasks, filled with sand, or any other heavy material, make excellent stamps. They are used with much success at Reese River. Twenty-five feet in the Gorgona mining ground was recently sold for $5 per foot. The Gorgona is situated in Montgomery district, and has been worked steadily, and the company have now between 75 and 100 tons of rich ore ready for the furnace or mill. Shipments of bullion are quite regular and large. We condense from the Esmeraldu *Union*:

The smelting works of Messrs. Muncton & Isenbeck were started about the first of the month on Dubuque rock. The result of the operation of these works is looked for with much interest.

An important strike was lately reported in the Young America, in the shaft, forty feet below the level of the tunnel. The lead is said to be four feet wide and apparently quite rich. The *Union* of the 2d inst. says:—Since the rich strike in this mine, about $150,000 worth of bullion has been taken out. No dividend has yet been declared, and shareholders are beginning to despair of ever receiving one. The mine is said to be very rich. We know not whom to blame; therefore we blame nobody. The present officers are striving hard to get things into proper shape, however.

VERMONT is entirely independent of the foreign market in regard to sugar and molasses; not an ounce of imported sugar will be seen in many sections of that State this year. Maple sugar is used, exclusively, in many portions of that State.

IMPROVEMENT IN WORKING SHIPS.—Since 1850, there has been a reduction of one-fifth in the number of men required for a certain amount of tonnage; so that our 175,000 seamen now work an amount of shipping which would have required 220,000 men in 1850.

IN SESSION.—The Legislature of Idaho is now in session and doing considerable work.

A New Method of Extracting Gold from Auriferous Ores.

BY DR. GRACE CALVERT, F. R. S.

At the present time it may be advantageous to persons in gold mining to be made acquainted with a new and simple method of extracting gold from its ores, which presents the advantages of not only dispensing with the costly use of mercury, but of also extracting the silver and copper, as well as the gold, which the ore may contain. Further, it may be stated that the process can be profitably adopted in cases where the amount of gold is small, and the expense of mercury consequently too great. Without entering here into all the details of the numerous (about one hundred) experiments which I made some years since, I will state a few facts which are necessary to give a general view of the subject. If 2.2 parts of pure and finely divided gold, obtained by the reduction of a salt of that metal, be added to 100 parts of pure sand, and placed in a bottle with a saturated solution of chlorine gas for twenty-four hours, only 0.5 of gold is dissolved. If the same experiment be repeated, but instead of chlorine water a mixture of chlorine water and hydrochloric acid be used, 0.6 of gold is dissolved. If, instead of employing hydrochloric acid and chlorine gas, a mixture of sand, reduced gold, and peroxyd of manganese, with hydrochloric acid, are placed in a bottle, 1.4 of gold is dissolved; so that it would appear that, under the influence of nascent chlorine, the gold is more readily dissolved than when the same gas is mixed in solution with hydrochloric acid previous to being placed in contact with the auriferous sand. Still these processes leave a great deal to be desired in a commercial point of view, as more than a third of the gold remains undissolved; and the same results are obtained if the chlorine gas be generated by another method, viz.: by adding to the aurifrous sand a mixture of chlorine of sodium, sulphuric acid, and peroxyd of manganese. Being convinced, therefore, that nascent chlorine gas was a fit and proper agent for cheaply extracting gold from ores, and that it was only necessary to modify the method of operating, I allowed the mixture of hydrochloric acid and peroxyd of manganese, or of sulphuric acid, peroxyd of manganese and chloride of sodium, to remain for twelve hours in contact with the auriferous sand; and then, instead of washing out the solution of gold, I added a small quantity of water, which removed a part of the acting agent, and this was made to percolate several times through the sand; by which method I succeeded in extracting from the sand, within a fraction, the whole of the gold. I then repeated the last experiments with natural auriferous quartz, and easily extracted the two ounces of gold per ton which it contained. I therefore propose the following plan for extracting the gold on a commercial scale: The finely-reduced auriferous quartz should be intimately mixed with about 1 per cent. of peroxyd of manganese; and if common salt be used, this material should be added at the same time as the manganese, in the proportion of three parts of salt to two of manganese. The whole should be then introduced into closed vats, having false bottoms, upon which is laid a quantity of small branches covered with straw, so as to prevent the reduced quartz from filling the holes in the false bottoms. Muriatic acid should then be added if manganese alone is used, and diluted sulphuric acid if manganese and salt have been employed, and, after having left the whole in contact for twelve hours, water should be added so as to fill up the whole space between the false and true bottoms with fluid. This fluid should then be pumped up and allowed to percolate through the mass, and after this has been done several times the fluid should be run off into separate vats for extracting the gold and copper that it may contain. To effect this, old iron is placed in it to precipitate the copper; and after this has been removed, the liquor is heated to drive away the excess of free chlorine, and a concentrated solution of sulphate of protoxyd of iron, or green copperas, is added, which, acting on the gold solution, precipitates the gold in a metallic form. By this method both gold and copper are obtained in a marketable condition. If silver is present in the ore, a slight modification in the process will enable the operator to obtain this metal also. It is simply necessary to generate the chlorine of the vitriol, manganese, and chloride of sodium process, taking care to use an excess of salt, that is, six parts instead of three, as above described. The purpose of this chloride of sodium being to hold in solution any chloride of silver that may have been formed by the action of chlorine on the silver ore, and to extract the metal, the following alteration in the mode of precipitation is necessary. Blades of copper must be placed in the saline solutions, to throw down the silver in a metallic form, then blades of iron to throw down the copper, the gold being then extracted as previously directed. I think the advantage of this process are, 1st, cheapness; 2d, absence of injury to the health of the persons employed; 3d, that not only is the metallic gold in the ore extracted (as is done by mercury), but it attacks and dissolves all gold which may be present in a combined state, besides enabling the miner also to extract what silver and copper the ore may contain.—*Chemical News.*

The eminent position held by Dr. Calvert among chemists, if not among metallurgists, warrant us in offering our readers all the information we have at command on the new propositions made by him for working mixed ores of gold, silver and copper. We have our doubts, however, as to how far they meet our requirements in this State, on the one hand, or, if needed, whether they are in advance of work which has already been done here. Gold has been extracted by the chlorine process with success, in this State, by means which involve less labor, and probably much less expense, than pumping chlorine water and acid—the latter ingredient is likely to involve much trouble and expense on a large scale. We are happy to have good authority for saying that the closing of certain works where this, among other processes, was carried on, was not due to any embarrassment arising from working, as it yielded satisfactory results to both miner and metallurgist. We would observe on the alteration suggested by Dr. Calvert, that if the greatest gain is derived, as his figures suggest, by repeated leaching, that the gain due to the nascent condition of the chlorine in the earlier stage might probably be equally secured by leaching with chlorine water, which would obviate much of the difficulty in pumping, as well as injury to the containing vats.

It will be observed that Dr. Calvert makes no mention of roasting. This was an essential part of the process, as originally applied to auriferous ores; and further, it being one which involves great care, we may conclude that he has not applied it to roasted ores. In the absence of direct experiments, we are certainly not prepared to admit that our silver ores can be rapidly attacked by chlorine in the way proposed. Still less is it simply necessary to generate the chlorine, taking care to use an excess of salt if the purpose of this chloride of sodium is to hold in solution the chloride of silver formed, unless a degree of heat is to be applied, and the quantity of water limited, in a way which would probably add much to the difficulty of using acid among the ore.

SHIPMENT OF PEARLS.—The Golden City took away on her last trip a package of pearls valued at $8,000.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

Bids for Contract.

Bids for contract to take out from Fifty to One Hundred Tons of Ore, from the claim of the ROSE GOLD MINING COMPANY, in Gentry's Gulch, Mariposa County, will be received. Said ore to be taken from a shaft on the claim, and from a level of eighty feet below the surface. Inquire of or address A. BUETELL, Secretary.
Office, No. 624 Market street San Francisco. 25-4

NEW PENSION, BOUNTY AND BACK PAY AGENCY.

The Proprietors of MINING AND SCIENTIFIC PRESS have established an Agency for prosecuting claims against the United States Government for Pensions, Bounty, and Back Pay.

Discharged Soldiers, and heirs of Deceased Soldiers, will find it for their interest to call upon us for any information relating to the above, as our facilities for preparing the proper evidence, and for collecting claims, are such as will invariably secure prompt returns.

Room No. 11 Government House, Corner Sansome and Washington Streets, San Francisco.

THAT PETRIFIED HONEYCOMB.—The Nevada *Gazette* disposes of the story that has so often been repeated in the Grass Valley papers, of the finding of "petrified honeycomb," in the following manner:—"The article, it is true, bears some resemblance to honeycomb, but not so much as to deceive an observer of ordinary astuteness. It is evidently a vegetable, petrified after the medullary substance had been partially decayed, but while the cellular tissue remained whole. It is well known that the cellular tissue of some vegetables is similar in formation to honeycomb. We do not pretend to know precisely what vegetable furnished the raw material for this really singular petrification; but it is certain that bees had nothing to do with it."

LAUNCH.—The fine new ocean steamship Del Norte, of Holladay's line, was successfully launched from the ship-yard of Henry Owens, on the Potrero, on Tuesday last. This is the first ocean steamer which has been built at this port. She is designed to run between this city and Crescent City and Humboldt. Her engines were taken from the steamer Republic. Her boilers are new, and were made by Coffee & Risdon, of this city.

GREASING A RAILROAD TRACK.—Some persons of an opposite political sympathy recently greased about half a mile of the track on which a special train was to run to a Union meeting, in New Jersey, recently. The grade was ascending, and, of course, the engine stopped, and the passengers were unable to reach their point of destination until the grease was removed from the track.

THE entire railway business of France is done by six companies; the largest of which is the Paris, Lyons and Mediterranean, whose length, including trunk line and branches, is 3,609 miles at an estimated cost of $251,000,000. The working expenses for 1862, were some forty-four per cent. of the gross receipts. The dividend paid was fifteen per cent. and a dividend of fifteen per cent. has just been declared from the profits of 1863.

DR. FRANKLIN is said to have first introduced broom-corn into this country as an agricultural product. He accidentally saw an imported wisp of the corn in the possession of a lady in Philadelphia, and while examining it, discovered a seed which he planted, and from this small beginning has sprung the present product in the United States.

THE nerve of a tooth, not so large as the finest sewing needle, will sometimes drive a man to distraction. A mosquito can make an elephant absolutely mad. The coral rock, which causes a davy to founder, is the work of worms. The warrior that has withstood death in a thousand forms may be killed by an insect.

IN Sweden they send children who are afflicted with whooping cough to the gas works, in order that the change of atmosphere may cure them. In lime producing districts a similar custom prevails—the smell of the burning lime acting as a curative.

CURE FOR A STING.—It is said that the sting of a bee may be cured by pressing a watch-key hard on the place after removing the sting; this prevents the poison from spreading; then apply moist snuff or tobacco, rubbing it well in, and in five minutes all pain will be gone.

A MASON in Limerick, Ireland, lately, hammering a stone, chipped out what he supposed to be a lump of glass. It proved to be a diamond worth five hundred dollars.

TITLES.—Thirty professional searchers are regularly employed in investigating the titles of property in San Francisco.

A NEW TURPENTINE.

The Sacramento *Bee* has seen some samples of turpentine recently manufactured at the Butte Mills, in Butte county, by Mr. Fairbanks. Pitch gatherers in the mountains had gathered immense quantities of gum from a species of fir tree which abounds there, imagining it to be good for resin and turpentine. On trial at the distilleries it could not be worked by any known process. Fairbanks made a trial of it at his mills, and by accident hit upon a process by which he succeeded in manufacturing an excellent quality of resin, and also an article of turpentine, which appears to be prime. The samples exhibited to the editor of the *Bee* have an odor something like a lemon peel, or balsam, is opaque, and highly volatile. If it will serve to mix paints and oils, the new discovery will prove an immense benefit to this State, as the quantity is almost unlimited.

In connection with the statement of the *Bee*, that the odor of this new turpentine is very much like that of "lemon peel," we may remark that the oil of turpentine and the oil of lemons, although so entirely different in smell and taste, are nevertheless composed of precisely the same elements, combined in precisely the same proportions—an atom of either being formed of a combination of five atoms of carbon and four of hydrogen. This principle of identity of elements and proportions with diversity of properties, is a principle in chemistry known as isomerism, the philosophy of which is still among the things not yet known to man. Housewives have frequently noticed that pies which have been flavored with oil of lemons, after baking, smell rank of turpentine. The principle of "isomerism," as given above, lends us to receive such a statement as a matter of no especial wonder. Neither need we wonder that the "new turpentine described by the *Bee* should smell like "lemon peel."

NEW INVENTION—A RIPPING INSTRUMENT.—All ladies who have occasion to alter garments know the trouble required to rip the seams with scissors or knife, and the care necessary to prevent cutting the fabric. Work sewed with most of the sewing machines is especially difficult to rip. A neat little instrument for this especial purpose has recently been patented, which works admirably. With it, ripping can be done ten times as rapidly, and much more safely than in the ordinary way. Milliners will find them just the thing for ripping straw work.

THE Metropolitan horse railroad company of Boston have nine hundred horses, which consume two hundred and fifty bushels of meal and six tons of hay a day.

A FIRST class locomotive now costs $25,000. The price was formerly $8,000. Iron horseflesh, like other meat, is on the rise.

MINING LAWS AND FORMS.
Third Edition revised and enlarged.
Compiled by H. B. CONGDON.
THIS Edition contains all the laws of the *STATE OF CALIFORNIA* and *NEVADA TERRITORY*, relative to Mining Corporations together with the Mining Ordinances of Mexico, complete; Digest of Decisions of the Supreme Court; Forms etc. 16 mo. flexible cloth, 192 pp. $2.50.
Published by H. H. BANCROFT & CO.

ECLECTIC MAGAZINE,
Literature, Science and Art.
Beautiful Embellishments! Fine Steel Engravings! New Volume begins January, 1865.
Its contents are carefully selected each month from the entire range of Foreign Quarterlies, Monthlies and Periodicals.
It aims to give the choicest articles from the pens of the most eminent foreign writers on topics of general interest.
The great questions of the day; touching Literature, Morals, Science, Philosophy and Art, are thoroughly and ably discussed by the most brilliant and distinguished expositors.
The Reviews of the most notable publications which from time to time appear, and which are so extended and comprehensive as to give the reader the finest extracts and a general idea of the whole work, form a noteworthy feature of the publication.
Many of the articles in the foreign periodicals treat on subjects entirely local, and it is the aim of the Editor to carefully select only those of interest to the American reader.
The miscellany department, containing brief criticisms of both foreign and American publications, selections of poetry, scientific and art items, is made with great care from extensive research and varied reading, and adds much to the value of the work.
Each number is embellished with one or more fine steel engravings—portraits of eminent men or illustrative of important historical events.
The twelve monthly numbers make three volumes per year, with indexes and title-pages for binding.
TERMS—$5 per year. Single numbers, 42 cents.
Clergymen, Teachers and Clubs supplied on favorable terms. Address,
W. H. BIDWELL,

IMPORTANT DISCOVERY
—IN THE—
Photographic Art.
Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.
[PATENT APPLIED FOR.]
THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a
SOFTNESS, CLEARNESS AND DELICACY OF TONE
unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.
In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.
"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.
☞ The public are invited to examine specimens at my Gallery. ☜ **JACOB SHEW.**

NOTICE TO MINERS.
NEW QUARTZ MILL.
THE ATTENTION OF ALL ENGAGED IN MINING IS called to Fauchery's unrivaled Mining Machines, consisting of his celebrated Turbine Water Wheel, which took the First Premium at the Mechanics' Fair at San Francisco for 1864; his Crocodile Quartz Crusher; his Pulverizer; and his improved Freiberg Amalgamating Barrel; altogether forming the most complete and effective Quartz Reducing and Amalgamating Mill now in use. This mill can be put up at less cost, run with less power, and accomplish more work, than any other now in use.
B. Fauchery and F. Genard
Having established a Quartz Mill and Metallurgical Works, are now prepared to crush, roast, amalgamate, assort, cupelate, and give correct analysis of ores. We are also prepared to give our attention to the building and constructing of Quartz Mills and Furnaces, and give directions for working Mines; and also to instruct persons in all branches appertaining to Mining Works, at No. 23 Fremont street, near Market, Railroad Foundry building.
F. GENARD, Metallurgist. **B. FAUCHERY,** Engineer,

HUNT'S NEW DITCHER.

HAVING SECURED FROM THE INVENTOR THE SOLE right to manufacture these Machines for the States of California and Oregon, and the Territory of Washington, I am now prepared to receive and promptly fill orders for these machines.

With the aid of three men and four horses this Machine will cut a ditch from two to three feet deep, as may be desired, dumping the earth all on one side so as to form a dike or embankment. For particulars send for circular, to

E. O. HUNT,
Windmill Builder, No. 28 Second Street and 110 & 112 Jessie Street, San Francisco. 9v22tf

Volcanic Smelting Furnace.

PERSONS desiring information as to the Use and Economical properties of this Furnace, and intending to make use of the same, when satisfied of its superiority over all other means of reducing ores and separating metals from the sulphurets, can obtain all needed explanation and advice in regard to the same, and the terms of sale of rights to use the same, on application to Col. J. D. Stevenson, or Mrs. E. J. Hall, Proprietress, 633 Third street, San Francisco.

Drawings may be seen at the office of Col. J. D. Stevenson, No. 614 Merchant street.

The time required for reducing ores by this Furnace is from one to three hours, and the amount of fuel only one-tenth as much as is consumed by other processes

The process of condensation is applied to this Furnace which will save all those portions of precious metals which usually escape in a volatile form.

The attention of all interested in the subject is requested to examine the important results obtained by this process.

Parties wishing will be allowed to erect a trial furnace of a capacity for smelting one ton or more, on signing an obligation to pay the usual fee for the right to use it, should they continue to make use of the invention for a longer period than two months.

DUNBAR'S
PATENT SELF-ADJUSTING
Piston-Packing.

Requires no Springs or Screws; Is always Steam Tight, without excessive friction, and never gets slack or leaky.

IT WILL SAVE EACH SEASON MANY TIMES ITS COST in friction, time, steam and power. No engine, old or new, should be without it. It can be easily fitted to old or new Pistons.

Having obtained the Agency of this VALUABLE IMPROVEMENT, I am prepared to furnish it wherever desired. For further information, address HENRY S. SMITH,
23v8 Golden State Iron Works, San Francisco.

IMPROVED WATER-WHEEL,
—PATENTED BY—
JOHN TYLER, WEST LEBANON, N. H.

Giving the Maximum Power with the Minimum Cost; Having the Following as Some of Its Advantages Over Others—Giving the Best Percentage of Water Used, Durability,

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—It can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 500 of them in use in the United States and Canada, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address

SMITH & HANSCOM,
15v8-3m Golden State Iron Works, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

FARRAND'S
Oscillating Amalgamator,
RECEIVED THE
ONLY PREMIUM
AWARDED FOR AMAGAMATORS
At the Recent Industrial Fair
OF THE
Mechanics' Institute of San Francisco.

Committee of Awards.

O. BELDEN, W. T. GARRATT, H. P. WAKELEE,
O. GOAT, GEO. JOHNSON, C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall, and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, whilst the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulphurets, as also for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,
R. L. OGDEN, Agent, SAN FRANCISCO.
S. E. corner Montgomery and California streets.
v9-19

Disney's Cylinder Amalgamator.
The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.
San Francisco, June 23, 1864. 1-3m

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percetage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER.

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 864.] HEPBURN & PETERSON.
nov8 3m*

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surfaces to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aginst purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.
sep21

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use.

This machine is now running on waste sands, from which it is taking out an average of 3¼ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.

SALMON'S
PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any other yet presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to clean and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a square or iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of wings placed like a screw propeller on the muller-shaft, force a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarity of propeller-screw and side wings, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The inventors of this machine are practical Mechanics as well as experienced miners, and the machine offered by them to the public is the result of long experience and close observation. Manufactured at the San Francisco Foundry, San Francisco, Cal. by

J. & W. C. SALMON,
To whom all orders should be addressed. 15

TO QUARTZ MINERS.
Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber is also perfecting a HAND MACHINE for Miners engaged in prospecting, which will work 25 pounds of ROCK at a time, and which will weigh about 125 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,
At the Novelty Iron Works, Nos. 37 & 39 Fremont street.

Office, No. 326 Clay street, San Francisco. [dec17-21

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—EDS. PRESS.

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

"STAND FROM UNDER."

On or about the 1st of January, 1865, we intend publishing a list of the Mining Companies which have long remained delinquent upon our books for advertising, together with the names of the Secretaries and Trustees, in cases where ample reasons for non-payment are not given. We intend that this list shall be a public warning. Let those interested read and heed.

POTOSI CO., vs. BAJAZET COMPANY.

EDS. PRESS:—I should like to make a few remarks, through the medium of your valuable paper upon the decision of Judge Mesick in this case in which he denies to the plaintiffs the right of injunction as against the defendants. This decision was known to a favored few, for some ten days previous to its being delivered, and as rumors of what it would be, had leaked out, most people were to some extent prepared for it.

To say that the imbecility of the argument, and the pucrility of the technical point upon which this decision was based, created a universal feeling of mingled astouishment and disgust, would be to convey but a faint idea of the sensation it created. It had been the general opinion that the Judge would take advantage of the numerous points involved in the case, and of the question placed before him in argument to base thereon an able decision, which should be worthy of the leading nominee for the district Judgeship. But he has let the opportunity go by, for distinguishing himself, and has delivered, instead, a decision based upon a point not even touched upon in the hearing of the case, and one which as far as any legal talent it displays, would be discreditable to a legal tyro of a few months practice. It would ill become me, as a member of the bar of Nevada, to refer particularly to the rumors afloat, as to the influence which has been brought to bear upon this matter. Yours &c.

LEX.

A native of Russia has discovered a process by which timber, though newly felled, may become so hard as to resist the influence of the most trying climate for an almost indefinite period. The most curious part of the invention is, that it does not involve the use of chemicals of any sort, such as steeping in creosote, &c., and that the process is applied to the tree while growing. The inventor is now making arrangements for the supply of his timber to railway contractors in England, and will not require any remuneration further than the amount which would be paid for ordinary timber, until the period shall have clasped beyond which the ordinary railway sleepers, telegraph-poles, &c, require to be replaced. The best railway sleepers require renewing at intervals of from four to six years; but the inventor of the new process of preparing timber asserts that he will supply an article which need not be disturbed for fifty years.

THE Virginia *Union* is informed that parties have arrived there for the purpose of inspecting the mines at that place and about Gold Hill, on account of certain heavy capitalists in New York, who wish to invest in the purchase of some good silver mine. Since the death of "wildcat" stocks these moneyed New Yorkers have become very favorably impressed with the idea of investing in our mines, hence these agents which they send among us.

MINING SPECULATION IN BOSTON.—The mining stocks now on the Boston market represent no less than 248 enterprises, as follows: Lake Superior copper mines, 76; Canada copper mines, 39; other copper mines, 14; gold mines, 40; coal mines, 41; iron mines, 8; lead mines, 12; mineral land and mining companies, 11; plumbago mines, 3; antimony, 2. In addition to which there are five petroleum companies. The figures are compiled from a list published by authority of the Boston Board of Brokers.

THE Russian Government encourages marriage among its soldiers. provides the couple with a house, supports them. rears their children, but takes away all the boys at a tender age and sends them to military garrisons. there to be trained for the army. There are 300,000 of this kind of soldiers now in the Russian army.

THE Comstock lead is found to bend strongly to the east in the vicinty of the Sierra Nevada works. The company named have expended a great amount of money in drifting west for the lend without any satisfactory result. Now, however, they are drifting eastward, with every indication of shortly finding the main lead. They are finding good quartz. So says the Territorial *Enterprise*.

MINING DITCH.—There is only one mining ditch in San Joaquin county that is assessed. It is nineteen miles in length, and is valued at $6,000.

MR. BEECHER says there are many persons who think that Sunday is a sponge with which to wipe out the sins of the week.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the nonperformance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew

BOUND VOLUMES READY.—Bound copies of Volume VIII of the MINING AND SCIENTIFIC PRESS, due the following honorable gentlemen, are now ready, and will be forwarded on receipt of their orders for the same:

Honorable Seth Martin, Nevada.
" R. A. Clark, Omon Valley, Plumas.
" J. P. Rhodes, Sacramento.
" A. A. Smith, Nevada.
" S. S. Littlefield, Siskiyou.
" E. H. Snyder, Placer.
" O. P. Stidger, Nevada.

Give us directions how to send them, gentlemen.

How to make your Remittances.—In most of the mining towns, bankers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

By order of the Board of Trustees.

nov26-22-4 GEORGE BOWER, Secretary.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe o be a sensible motto.

New Era Copper Mining Company, Salt Spring District, Tuolumne County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 18th day of November, 1864, an assessment of 25 cents per share was levied upon the Capital Stock of said Company, payable on the 19th day of November, 1864, in United States gold coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 7th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. And in accordance with law, and an order of the Board of Trustees, made on the 21st day of July, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the salesroom of Jerome Rice & Co., No. 327 Montgomery st., San Francisco, on the 3d day of September, 1864, at the hour of 12 o'clock M., of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

GEO. L. FAULKNER, Secretary.
8 Office, of the Company 411 Clay St., San Francisco.

POSTPONEMENT.—The above sale is postponed until Saturday, October 1, 1864, at the same hour and place. By order of the Board of Trustees.
10 GEO. L. FAULKNER, Secretary.

POSTPONEMENT.—The above sale is postponed until Saturday, October 29th, 1864, at the same hour and place. By order of the Board of Trustees.
15 GEO. L. FAULKNER, Secretary.

POSTPONEMENT.—The above sale is hereby postponed until Tuesday, January 31st, 1865. By order of the Board of Trustees. (18) GEO. L. FAULKNER, Secretary.

ENLARGED.—The *Mining and Scientific Press*, of San Francisco, commenced its ninth volume to-day in an enlarged form. This valuable journal has been deservedly successful, and should have a large circulation among the mining community.—*Alpine Chronicle.*

Roba Gold and Silver Mining Company, Reese River Mining District, Lander County, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 21st day of November, 1864, an assessment of one dollar per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin to the Secretary, at the office of the Company, No. 35 Exchange Building, in the city of San Francisco, California, or to E. S. DAVIS at Austin.

Any stock upon which said assessment shall remain unpaid on Saturday the 24th day of December, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 9th day of January, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

WM. W. KNIGHT, Secretary.
Office, No. 36 Exchange Building, Northwest corner Montgomery and Washington street, San Francisco. nov26-22-4

Rogers' Silver Mining Company, Flowery District, Storey County, State of Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 1st day of December, 1864, an assessment of two dollars per share was levied upon the capital stock of said Company, payable immediately in United States gold and silver coin, to the Secretary, at his office, No. 103 California street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Thursday the 5th day of January, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold at public auction on Monday the 23d day of January, 1865, at 12 o'clock M. of that day, by John Middleton & Son, at No. 400 Montgomery street, San Francisco, to pay the delinquent assessment thereon, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

JNO. F. POPE, Secretary.
San Francisco, Dec. 3, 1864. 23-4

Sisters and Augusta Gold and Silver Mining Companies. Location—Augusta District, Lander County, Nevada Territory.

Canvassing Agent Wanted

For the Mining and Scientific Press.

An experienced, prompt and reliable agent can secure a desirable and lucrative engagement by applying immediately at this office.

Advertising Circular.

The Proprietors of the MINING AND SCIENTIFIC PRESS would call the especial attention of MINING SECRETARIES, TRUSTEES and SHAREHOLDERS, to a few substantial reasons for the publication of Mining Notices in their journal—the first and only important newspaper of its class published upon this coast.

1st. The PRESS enjoys a large and permanent subscription list, having a more universal circulation among shareholders and men intimately connected with mining interests than any other publication.

2d. Under the present law the publication of all mining notices on Saturday, in a weekly journal, complies as fully with the statutes as a daily publication. It is generally found to be equally as convenient for secretaries, and decidedly preferable to stockholders who have not time to examine throughout every issue of a daily.

3d. Economy in mining should always be looked upon with favor, and the cost for weekly advertising in the PRESS is less by one half than the rates of any other journal in this city possessing a respectable circulation.

4th. The publishers of the PRESS, making the mining interest their especial care, take particular pains to assist in the avoidance of errors in advertising. Our print is also more clear and perfect than can be expected in such papers as are hurriedly issued from cylinder presses.

5th. Our "Shareholders' Directory" forms a complete index of all mining notices published in San Francisco, by reference to which shareholders can at once see if their company is advertised, and determine whether the same is inserted in the PRESS or some other paper.

6th. Many copies of the PRESS are bound by prominent professional men, mechanics, secretaries, brokers, shareholders and others, as an important record for future reference, thereby rendering advertising, of every class, in its columns, of peculiar and permanent value.

7th. The benefit of having all mining notices consolidated in one newspaper, for the common convenience of shareholders, secretaries, and others who have occasion to refer to the same, is obvious. With this view we have established our rates at only fair, living prices, believing that a journal like ours, untrammeled by party, creed, or prejudice, is the only medium which can reasonably ask for such a consolidation of mining patronage.

8th. Our rates are uniform as well as moderate. Advertisements will be taken from the forms and printed on slips or as circulars, for sending personal notification to stockholders, whenever desired, at $1 per hundred.

9th. Advertisements in the columns of the PRESS, after their first insertion, are arranged alphabetically. Our present list is equalled only in one instance by that of any other journal. Shareholders, as well as strangers, naturally turn their attention to a mining journal for information concerning the mines and mining matters.

10th. Blanks for filling out advertisements of assessments or notices of sale are furnished gratis. Our rates of advertising, and any other information desired, will be freely given upon application at the office.

LAST, BUT NOT LEAST.—Our sheet (having been recently enlarged to the size of Harpers' Weekly) is now only equalled in its dimensions by one mining paper in existence—the *London Mining Journal*. Published in this, the greatest mining field of the world, we desire that the PRESS shall have no superior. We can only realize our cherished object of building up a reliable advocate of the science and business of mining, which will be of just honor and profit to our community, by experience and liberal patronage. The bestowal of such favors only as naturally belong to us, and which it is clearly for the benefit of the mining fraternity to extend, is all that is requisite, and we are confident we shall receive it.

DEWEY & CO.,

Publishers of the Mining and Scientific Press, Nos. 11 & 56 Government House, Corner of Washington and Sansome treets, San Francisco.

THE *Mining and Scientific Press* makes its appearance upon an enlarged sheet. The *Press* is by far the best scientific paper ever published on the Pacific coast. Its contents exhibit both industry and ability. We wish it continued success.—*Washoe Herald.*

SCIENTIFIC AND MINING JOURNAL.—This is as valuable a publication as is produced on the Pacific Coast, and one which interests all parties. It contains much that is instructive and entertaining, and seems to have the right men at the head of its affairs.—*Spirit of the Times.*

American and Foreign Patent Agency

FOR THE

PACIFIC COAST.

DEWEY & CO., AGENTS,

AND PUBLISHERS OF

The Mining and Scientific Press,

Corner of Washington and Sansome Streets.

INVENTORS AND INVENTIONS.—Let us not cheapen inventions, but be kind to the inventors; beware of killing the goose that lays the golden egg! Many inventors die before the hour of triumph; others falter by the way. Invention is a struggle, a conflict, almost a battle; if the victors are rewarded, the dead are honored and the wounded carefully attended to. Glorify the inventors who succeed; cover with an indulgent self-respect the faults of those who fail; and soothe the last years of the wounded—those invalids of industrial science who have known only the pains of the fight, and always remained ignoraat of the joys of victory —[Dumas.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filling out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS on application at the office

TO MINE OWNERS.

REDUCTION AND SMELTING WORKS ON A SUFFICIENTLY large scale, where Ores of every kind can be thoroughly treated, so as to extract therefrom the precious metals, have long been wanted in California.

The Undersigned is desirous of erecting such works to meet the demand, provided sufficient encouragement can be obtained in regard to the quantity of work which may reasonably be looked for.

I have sufficiently proven, in my former smelting works, on Bryant Street, where I worked the richest of the Ophir ores to within Two and One-Half per cent. of the Assay, that I was acquainted with Metallurgy previous to my recent travels and experience in Europe, where I have built, during my sojourn there of nearly three years, many Reduction Works, thereby proving that I am capable of working ores by any and all known processes, whether by Smelting or Amalgamating, or other methods best adapted to the nature of the ore to be worked, and as close to the assay as can be done anywhere in Europe.

Mine owners wishing quantities worked as cheaply and effectively as can be done by sending it to Europe, will address the undersigned. Parties wishing to erect Quartz Mills, or other Reduction Works, can be furnished with Plans, Estimations, and other useful and necessary information as to the best mode of extracting the precious metals.

By sending $1 in coin to the above address, five boxes of pills will be sent to any part of this coast or the interior, Free of charge. 16-3m4c8p

KELLOGG'S PATENT
IMPROVED NEWBURY
PRINTING PRESS.

This New, Cheap, and most Desirable

JOB PRINTING PRESS

Can now be seen in operation in San Francisco, at the office of the MINING AND SCIENTIFIC PRESS, corner of Washington and Sansome streets.

Kellogg's Improvement

Is the addition of a very simple, but ingenious and effective method of self-delivering of the cards or printed sheets from the Newbury Press.

It costs less, weighs less, and prints faster than any of the ordinary Job Presses now in use. Any Journeyman or Apprentice, who understands working the Washington hand-press, will have no difficulty in operating this machine.

As a Cheap and Simple Press, for small Printing Offices in the interior, it highly recommends itself.

Address, **L. M. KELLOGG.**

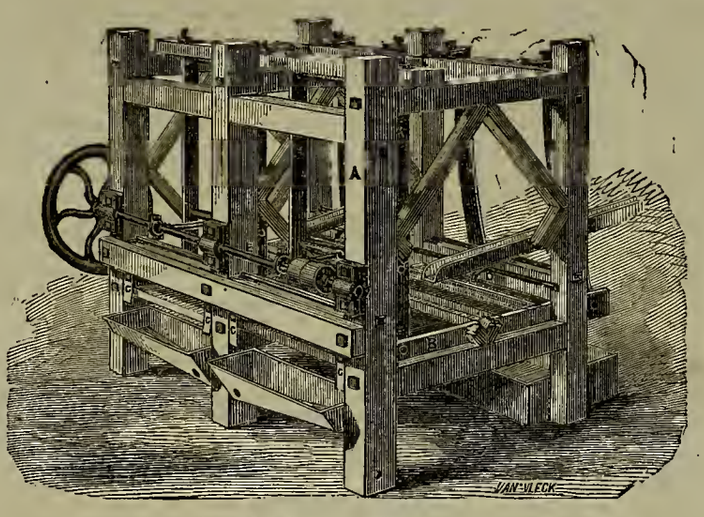
Scientific and Mining Journal.—This is as valuable a publication as is produced on the Pacific Coast, and one which interests all parties. It contains much that is instructive and entertaining, and seems to have the right men at the head of its affairs.—*Spirit of the Times.*

HUNTER'S CONCENTRATOR, AMALGAMATOR AND SEPARATOR.

We herewith present our readers with a faithful representation of Hunter's new Concentrator, Amalgamator and Separator. This machine may be used for the concentration of all metals from the sands where the specific gravity of the ore is from one to two per cent. greater than that of the sand. It has already been proven, in practice, one of the most effective machines of the kind in use. The annexed illustration gives a very correct view of the machine, and the following description



A New Gold Saving Machine.

will serve to explain the principles of its operation: Letter A is a substantial frame work supporting the machine; chutes B B have an oscillatory motion, each chute being 2 ft. 6 in. in the clear by 3 ft. 9 in. long, covered with mercuried plates of copper, for amalgamating the free gold that may be caused to pass over it. The perforated box, or receiver, is for the even distribution of the sands from the battery—the smaller one for distributing or throwing jets of water on the upper end of plates. The chutes discharge at each end; the water and sand at lowest end, the sulphurets or metal at highest end. The separation is produced by the short, quick motion of the chutes, and the percussion formed by their striking against the steel springs C C. The chutes are suspended at each end, on wood or iron flanges, with set screws for adjusting them to any required elevation. D is a water pipe, with fassets for regulating the supply of water on the upper end of the chutes. E is the main driving shaft, with fly-wheel, tight and loose pulleys and eccentrics, with driving rods, to give motion to the chutes. The driving rods are arranged with set screws, to shorten or lengthen, thereby giving any concussion that may be required. The whole machine is under the control of the attendant for separating all ores and for all grades of working coarse or fine sand or pulp, as discharged from the pans or batteries of quartz mills.

One of these machines is now running in the Princeton mill, on the Mariposa estate. In relation to its efficiency as a concentrator and separator, we would refer the reader to a certificate from the Superintendent of the Princeton mill, and another from Professor Blake, of this city, who has recently witnessed its operation. These certificates may be found in our advertising columns, on page 409.

BENICIA CEMENT COMPANY.

The Benicia Cement Company, whose works are located at Benicia, Solano county, are now manufacturing an hydraulic cement, which, for durability, is pronounced by competent judges equal to any that has ever been produced in any part of the world. It is used on the Government works now being erected at Alcatraz and Black Point, at the State Capitol, State Prison, the San Francisco Gas Works, and many other places where the quality of work being done requires the very best article that can be procured. The existence of this deposit in inexhaustible quantities at Benicia, is a matter of great commercial importance to the entire Pacific coast; and it is a matter of congratulation that the company above named is now fully organized for work, and quite able to supply the wants of this coast with a better and cheaper article than we have, until quite recently, been compelled to procure, at great cost of transportation, from Eastern markets. The enterprise of this company has thus succeeded in adding still another new branch to the already extended list of California mineral productions. The company has recently employed Prof. Lanszweert, metallurgical and analytical chemist, of this city, to thoroughly examine the company's works and ground, and report upon the same. The Professor has fulfilled his commission, and his report has been published in a neat pamphlet, by order of the company. Having carefully read it, we have thought the matter of sufficient interest and importance to transfer it entire to our columns. It will accordingly be found in the present issue. The office of this company is located at 529 Clay street, in this city—W. H. Martin, Agent.

A FLOURISHING MINE.

Professor Silliman has recently examined and prepared a complete report of the Empire Mill and Mine, at Gold Hill, Nevada. From this report it appears that the mine has been opened to a depth of 445 feet. The Company have crushed, since their organization, about 26,000 tons of ore, from which they have received bullion to the value of $1,043,720—an average of $40.76 per ton. Of this amount, $288,000 has been paid out in dividends; $24,000 is now in reserve for the December dividend, leaving a balance of $731,720 to represent the cost of mining and milling, opening the mine, and all other expenses to date. *There has never been an assessment levied upon the stock of this mine,* nor has anything ever been paid in on its capital stock, which is $1,000,000. All its prospecting, opening, milling and mining, has been paid out of the mine itself, and two fine mills have been built, at an expense, the first of $60,000, and the second of $75,000. The proportion of the gross proceeds which can be laid aside for dividends hereafter, will be largely increased over the past. The Professor, after a careful examination of the interior of the mine, thinks that the total body of ore already developed, above the present lowest level, will yield $3,988,000, or nearly four times as much bullion as has already been taken out. There are but few mining companies that can make a better exhibit of actual working or prospective yield than the Empire Mill & Mining Company. The affairs of this Company have always been managed with skill and prudence—a fact which we have frequently heretofore noticed.

CALEDONIA MINING COMPANY.

A meeting of this company was held December 19th, and the number of shares of capital stock reduced from 5,000 to 2,500. The company is now in efficient working order, and its future prospects are satisfactory and encouraging. The Company's ground adjoins the Uncle Sam mining company on the south, in Gold Hill, and a splendid vein of mineral has recently been opened on the lode, which promises rich results upon going down to a proper depth. Work was commenced upon the Caledonia mine in March, 1861, and over $100,000 has been expended in its working. The tunnel has been run over 2,000 feet, and a large amount of drifting done.

A novel (as well as profitable) feature of this company's claims is the supply of water issuing from the lode through the tunnel, and which is sold to the neighboring mills at a clean profit of $450 per month. We cannot but consider the quiet manner in which this company has continued its active operations as highly meritorious, and complimentary to its managers, and confidently anticipate seeing it assume its proper place among the best mining corporations of our city. Its present Board of Trustees consists of Martin White, E. Stevens, A. E. Crane, C. S. Bowden and J. M. Buffington.

A woman was found dead in her bed at Bordeaux, and the doctors assert that she died from the effects of the smell of quinces, a large basket of which was found in the room.

ARIZONA MINING LAWS.

Of the Registry and Government of Mines and Mineral Deposits.

Be it enacted by the Legislative Assembly of the Territory of Arizona.

SECTION 1. All mining rights on the public lands of the United States as well as rights acquired by discovery on the lands of private individuals, are possessory in their character only, and such possessory rights shall be limited, regulated, and governed as hereinafter provided.

Probate Judges to decide all Mining Controversies.

2. The Judges of the Probate Courts in their respective Counties shall have jurisdiction over the registry and denouncement of all mines and all mineral and auxiliary lands, and the disputes and questions of whatsoever nature between all adverse claimants to mines or mineral, and auxiliary lands, which he shall hear, and determine in a summary manner according to the rules of practice as prescribed for the District Court in civil cases, and all proceedings and records therein shall be entitled "In the Probate Court.—Judicature of Mines."

3. The Clerks of the Probate Courts shall be ex-officio recorders of mines and all mineral and auxiliary lands in their respective counties.

Preservation of Specimens and Curiosities.

4. The County Commissioners of each county shall at the expense of the county provide a suitable office for the Clerk of the Probate Court, at the seat of justice of his county, which shall be called the Recorder's Office, in which he shall keep the books and papers of his office; they shall also provide rooms and cases for the preservation of mineralogical specimens from each mine recorded, to be properly numbered, marked and registered by him, with the time when and the locality whence taken, and he shall also preserve in said rooms all rocks, fossils, earths, minerals, plants and other matters that may be useful or interesting for scientific, legal or practical purposes.

Probate Court Clerk to keep Records of all Mining Claims.

5. He shall provide three books of record, the expense of which shall be allowed by the County Commissioners and paid out of the funds originating from the tax on mines, which he shall respectively mark as "Books of Mining Record," "A," "B," and "C," which shall be kept in his office, and open to the inspection of the public at all times.

6. The Recorder of mines shall collect and record in Record Book A, all registrys, denouncements, and claims of mines, whether on public lands or private grants, by individuals or companies, that were made prior to the passage of this chapter, and make complete indices of the same, and keep them for the inspection of the public.

7. He shall record all first or preliminary registrys and denouncements of mines, made after the passage of this chapter, in Record Book B, and all second registrys after the sinking of the shaft and complying with the law as hereinafter provided, in Record Book C, which shall be alike kept for public inspection.

8. The Recorder of mines shall keep a seal of office, to be provided by the County Commissioners of each county, and affix the same to all official documents.

Fees for Recording.

9. He shall be allowed and receive from the parties interested the following fees, and when the number of words contained in the papers to be recorded shall exceed one folio he shall receive in addition twenty cents per folio: For each record of former claim in Book A, $1. For each preliminary or first registry of a mine or auxiliary mining land, in Book B, $1; For each succeeding claim on the same deposit, $1; For final record after sinking shaft, and certificate, in Book C, $2; For final record of each additional claim of the same party on the same deposit, in Book C, $1; For recording each separate auxiliary tract, $1; For recording articles of co-partnership, $2.50; For recording charters of mining companies, $2; For recording notice required by section 25—I, $1; For recording each conveyance, $1; For any subsequent copy of the foregoing, one-half of the above rates; and for all fees in litigated mining cases he shall receive the same compensation as is allowed to Clerks of the District Courts in civil cases for like services, and for all services and fees not provided for in this chapter his fees shall be fixed by the Judge of Probate.

Recording of Charters, Property and Co-Partnership Agreements.

10. The charters of all mining companies and their officers, where they keep their office, and where their mines are situated, with a description of their machinery, and a list of their property, shall be furnished by them, and recorded in the Record Book C of the Recorder, and they may procure certificates thereof, that shall at all times be good evidence in all courts of justice.

11 The co-partnership agreements of all mining partners shall be recorded in the same manner and certificates thereof shall have the like effect, and the company or co-partnership failing to furnish the charter or agreement required to be recorded by this chapter, after due notice by the Recorder, shall be deemed to stand in contempt of the law, and punished by the Probate Judge by fine in his discretion not to exceed one hundred dollars.

No Fictitious Names can be used.

12. All mining claims shall be registered in the real names of the parties, and by persons legally authorized to make such registry either in person or by power of attorney, to be exhibited to and filed and recorded with the Recorder of mines, or with the Recorder of the mining district as hereinafter provided, and no claims shall be registered in the names of fictitious persons, and any person violating the provisions of this section shall forfeit all right and interest in the claim so registered, and the same shall be subject to registry and denouncement by another, on the same terms as newly discovered veins.

13. The property of all mines and mineral lands in descents and conveyances of property to heirs shall be considered and regarded as real estate.

All Sales of Claims to be Registered by the Recorder.

14. All sales of mining claims or mineral lands, or any interest in the same, shall be registered with the Recorder, by deed to be executed as provided for conveyances of real estate, and in a book to be kept by him for that purpose, within three months from the date of the sale of the same, or shall be declared forfeited and subject to denouncement and registry by another; and such conveyances when so registered shall be subject to the same rules which govern conveyances of real estate, and shall have the same effect in the courts.

Two Hundred Yards Square Allowed to each Claim.

15. Every mining claim or pertenencia is declared to consist of a superficial area of two hundred yards square, to be measured so as to include the principal vein or mineral deposits, always having reference to and following the dip of the vein so far as it can or may be worked, with all the earth and mineral therein. But any mining district organized in accordance with the provisions of this chapter, may prescribe the dimensions of said mining claim or pertenencia for such district, provided that in no case the dimensions so prescribed shall exceed the number of yards allowed by this section, and further provided, that no such mining district shall diminish the extent of the Territorial claim to one pertenencia as defined in this section.

Discoverer may take two Claims.

16. Any person discovering or opening a vein or other mineral deposit in this Territory, not actually worked or legally owned by other parties, or registered in accordance with this chapter, shall by properly denouncing and registering the same be entitled to claim and hold a possessory right to a tract of land to the extent of two mining claims or pertenencias including the said vein or mineral deposit, and conforming as nearly as possible to the general direction thereof, each to be measured two hundred yards long by two hundred yards wide, the direction of the lines to be determined by the person claiming.

17. If two or more persons are associated, and have formed a company for the exploration and working of mines, and one or several shall make discoveries of mineral deposits in consequence thereof, said company so engaged in exploration shall be entitled to denounce and register one discovery claim only upon each lode.

Lands for Mill Sites or other necessary purposes may also be taken up.

18. It shall be lawful for the claimants of a mine or mineral lands to locate and take possession of public lands for a mill site and other necessary works connected therewith, which shall not exceed one quarter section, containing a stream or other water suitable for the purpose. They shall have a right to place a dam or other obstructions on such stream, and to divert its waters for the above uses and purposes. They shall within the time and in the manner prescribed in this chapter for the registration and denouncement of mines, proceed to denounce and register the same with the Clerk of the Probate Court, and they shall be known as auxiliary lands. And if within three years from the day their notice of claim is so recorded, they shall expend in fitting the same for a mill, or in placing a mill or reduction works thereon, the sum of one hundred dollars, they may cause the record of such work to be made, and proceedings for confirming their title to be instituted as provided in section 29 of this chapter, with like effect, and receive a certificate of title as therein provided, conforming as nearly as they can to the requirements of that section. Instead of the work required by section 32 of this chapter they shall use the machinery or other works erected upon said land for mining purposes at least thirty days in each year. Such claims shall be subject to all the provisions of this chapter which are applicable to mining rights, and may be abandoned and re-located. All rights to auxiliary lands acquired under the laws of any mining district before this act takes effect shall be valid, and the owners of the same, upon complying with the provisions of this section may take the like proceedings to confirm their titles with a like effect.

Claims must be well Defined.

19. It shall be the duty of all claimants of mining claims, mineral lands and auxiliary tracts, to at once define the extent and boundary of them as nearly as possible, by good substantial monuments or other conspicuous marks, in the presence of the Recorder of the mining district, or of some witness who shall prove to the satisfaction of the Recorder that the same has been done, and to post up a public notice of their claim, at the opening of the principal vein, and to have them properly registered and recorded within three months from the time of first claiming them at the office of the mining district Recorder according to the provisions of this chapter. Such record shall give a faithful description of the veins, mineral deposits, and tracts of lands, the character and bearing of the veins or deposits and their connection with natural monuments or conspicuous objects in the vicinity.

20. No person shall change his original monuments or boundaries of mineral or other lands, but if a subsequent investigation makes this convenient or necessary, and it can be done without prejudice to other parties, then such change shall take place by the sanction of the Judge of the Probate Court, provided they are properly recorded and the new boundaries and monuments fixed at once when the original ones are removed.

No Natural Water can be Claimed.

21. All minerals, woods, waters, earths and vegetation found within the boundaries of any tract of land registered and claimed for mining shall be exclusively used by him or them who are legally entitled to the possession of the land wherein or whereon they are situated so long as they are used for mining purposes only, provided that no one shall have the right to prevent transient persons from using the waters along the public highways, where they were provided by nature in natural tanks, springs, streams, or otherwise, nor from making such equitable disposition of the waters as the Legislature shall prescribe.

22. No person shall have the right to impede or inconvenience travelling by fencing up the public roads, filling them up with rubbish or undermining them so as to endanger their safety, neither shall any one change their established direction without sanction of the proper authorities.

23. Whenever two or more persons or parties explore and prospect one and the same vein, and at or about the same time but at different places, and without knowledge of each other, then he or they who shall prove first occupancy shall have the right of first location, taking the principal point of excavation as the center of their claim or claims on each side along the general direction of such vein or deposit. The other parties shall proceed by the same laws after the others have fixed their boundaries. Should there be left vacant ground between the different parties then it shall be at the option of the first discoverers so to change their boundaries as shall best suit them, and have them recorded accordingly. Any other parties shall locate in the order of the time of their arrival on the vein or mineral deposit.

24. Whenever two or more parties shall select the same mine or mineral deposit for exploration, and the parties first on the ground, knowing the other parties to be at work, shall fail to give warning, either verbally or in writing, of their priority claim on such vein or deposit, then that portion of the mine situated between the main excavations of the two parties shall be equally devided between them, irrespective of the number of members each company may have; *Provided*, That the intervening portions shall not exceed the quantity of land allowed by the provisions of this chapter.

All Previously Located Claims are Legalized.

25. The laws and proceedings of all mining districts established in this Territory for the denouncement, registration, and regulation of mines, mining claims, mineral lands and auxiliary lands, prior to the day this act takes effect, are hereby legalized and declared to be as valid and binding in all courts of law, as if enacted by this Legislative Assembly, to the extent and under the conditions and restrictions herein contained.

I. All rights, claims and titles to any veins, mineral lands or mineral deposits, and auxiliary lands, acquired before this and takes effect, under, by virtue of, and in conformity to the laws of said mining districts, are hereby declared to be valid and legal, and shall be respected and enforced in all courts of this Territory, when sustained by the evidence herein provided; but no amount of work done thereon shall be construed to give a perpetual title thereto, but shall give such title only and such rights and privileges as is provided in section 29 of this chapter; and no person who was at the time of the location of his claim, an inhabitant of this Territory, shall forfeit his claim because he was not a resident also of the mining district in which his said claim was located. And no such right, claim or title, shall be considered as abandoned, provided the claimant shall within six months from the day this act takes effect, file with the clerk of the Probate Court of the county in which his claim is situated, a brief description of the same, giving the name of the district in which the lode is situated, and of the lode or lodes, and the extent of his claim thereon, with a declaration that he intends to retain and work the same according to law, unless such claim has been forfeited, and subject to re-location under the laws of such mining district before this act takes effect.

No Claim Rejected for Informality.

II. All records and all papers required by the laws of said mining districts to be deposited with the Recorders of said districts for record shall be received as evidence of their contents in all courts of this Territory, and shall not be rejected for any defect in their form, when their contents may be understood, but shall be valid to the extent provided by said mining laws, except as herein before restricted; *Provided*, That such records and papers are deposited with or recorded by the Clerk of the Probate Court of the county in which said mining district is located, and within three months from the time this act takes effect; and if said records or papers are lost or mutilated, or if such Recorder of a mining district shall neglect or refuse to deposit the same as aforesaid, an affidavit of their contents made by any person interested therein, or certified or sworn copies thereof may be so recorded, and shall have the like effect.

III. All conveyances of mines, mining rights, mineral and auxiliary lands made prior to the time this act takes effect, shall be valid and binding to pass the title of the grantor thereof, although defective in form and execution, if their contents can be understood, and as such shall be received and regarded in all courts of this Territory; *Provided*, That such conveyances shall be deposited with or recorded by the Clerk of the Probate Court of the county where said mines are situated, within three months from the time this act takes effect, and if lost or mutilated, copies or affidavits of their contents, executed as aforesaid, may be recorded as provided above.

Mining Recorders must Deposit their Records with Probate Clerk.

26. Every Recorder, Register, Clerk, or other recording officer, of every such mining district, or who has at any time acted as such recording officer, within three months after this act takes effect, shall deposit with the Clerk of the Probate Court of the county in which said district or greater part thereof is situated, all records which he has so kept, and all papers deposited in his hands for record, and papers so made or deposited with his predecessors in said office which are in his hands as aforesaid, or he shall so deposit certified copies of the same. And such records and other papers shall be securely kept by such Clerk, open in office hours to public inspection, and copies of the same duly certified by him shall be received in all courts of justice, and have the same effect as the originals. And any such Recorder, Register, or other recording officer of each mining district who shall neglect or refuse to comply with the provisions of this section shall be liable in damages to the party injured thereby, and shall be liable to be punished by the Judge of Probate of the county in which said mining district, or the greater part thereof, is situated, for contempt, by fine not exceeding five thousand dollars, and imprisoned not more than one year, and shall be incapable of holding any such office and mining claim.

27. Mining districts now existing may be continued or new mining districts may be established in the manner and for the purposes hereinafter provided.

Oath and Duties of Mining Recorders.

1. The Recorder of every mining district now existing shall at the same time that he deposits the records of said districts, with the Clerk of the Probate Court, as the last preceding section requires, take an oath before the Judge of said Court that he will faithfully perform the duties of his office until another Recorder shall be elected and qualified in his place, which oath shall be recorded by the Clerk of the Probate Court. He shall record in a book to be kept by him for that purpose all notices of claims or rights to veins, mineral deposits, mineral lands, and auxiliary lands, which may be left with him to be recorded, and shall note on all papers which may be received by him to be recorded, the time they were so received by him, and they shall be considered as recorded from that time. He shall when requested by any such claimant go with him to his claim and see that the same is measured by metes and bounds, and marked by substantial monuments on the surface of the earth, and shall make a record of the same,

and of the time when it was done and certify it to be correct, or shall make a record and certificate of the same on the evidence of a credible witness, who was present when the same was done, and is cognizant of the facts, and whose name shall be entered on the record. He shall when requested by any such claimant, go with him to his claim, and examine any shaft that may be sunk by him, or tunnels that may be opened to the same, and make measurements of the same, and a record and certificate as aforesaid; and he shall in like manner examine, measure or estimate, and make and record a certificate of any work which is required by law to be done by a claimant. And the said recording officer shall quarterly file with the Clerk of the Probate Court of the county in which said district is located a copy by him certified of all records made by him for the three months last preceding, which shall be duly recorded by said Clerk, and a copy of said record duly certified by him shall be evidence of its contents in all courts of this Territory. And such recording officer shall be liable to all the penalties provided in the preceding section, if he shall neglect or refuse to perform any of the acts and duties required of him by this section, but shall not be required to perform any such service until his fees for the same, to be fixed by the mining districts, are paid him, if he requests it. And if any paper deposited with him for record is required to be recorded by the Clerk of the Probate Court, he shall at the time said paper is so deposited with him, take and receive the fee fixed by law for recording such paper by said Clerk, and pay the said Clerk said fee when he deposits said paper with him to be recorded as aforesaid. All such mining districts may make laws not inconsistent with the laws of the Territory, may elect officers for the government of such districts, and fix their compensation, but all such acts and proceedings shall be recorded, and all records and papers thereof filed with the Clerk of the Probate Court as aforesaid.

New Mining Districts may be Organized.

11. Any number of persons not less than twelve, owning mining claims in any mining district, or in any contiguous mining districts, or who have discovered and may wish to denounce a mine or mineral lands, not within the limits of any established mining district may proceed to make a new mining district at a meeting of persons holding claims in such district so to be established, and of claimants in any districts to be divided or to be included therein. They shall cause a notice in writing, and specifying the limits of said contemplated district, signed by them, to be posted in three conspicuous places in said district, and if any part of an established district is to be included therein by leaving a copy of said notice with the Recorder of said district at least ten days before the day of said meeting. At said meeting all persons holding claims as aforesaid may vote and may determine by a majority vote of those present whether said new district shall be established and its limits, but within the boundaries named in the notice for said meeting, and thereupon the persons holding claims in such newly established district shall proceed to select a name, and make laws therefor, and elect a Recorder, who shall be qualified as aforesaid, who shall perform all the duties and be subject to all the liabilities provided in this chapter for such officers, and shall file with the Clerk of the Probate Court as aforesaid a record of the proceedings of this and all subsequent meetings at the time and in the manner herein provided.

Thirty Foot Shaft or Fifty Foot Tunnel must be made within One Year.

28. It shall be the duty of all claimants of mineral tracts to sink at least one shaft of thirty feet in depth, or to run a tunnel of fifty feet in length, in the body of the vein or in the adjoining rock, so as to test the vein from the surface, for the purpose of ascertaining the character and capacity of such mineral deposit, within the space of one year from the day of first taking possession thereof, and they shall notify the Recorder of the mining district that said shaft or other work is completed, and that they intend working the vein or mineral deposit. And the Recorder shall examine said work in person, and make and record a certificate of the result of such examination, which shall contain a statement of the condition and quality of the vein or mineral deposit, the amount of labor performed, and a general view of the results obtained. Said report shall be accompanied by three specimens taken from different parts of the work, which said specimens, with a copy of the record so made by him shall be filed by him within the time required by this act in the office of the Clerk of the Probate Court. And said Clerk shall make a record of the same. Such specimens shall be numbered and described by him, and be preserved for the use of the mineralogical professorship of the University of Arizona.

Perpetual Title may be Granted by the Probate Judge.

29. The Judge of the Probate Court at any time within thirty days after the record made by the Clerk of said Court as provided in the preceding section, upon complaint in writing made to him by such claimants, describing fully their claims, stating the labor performed by them, and the certificate thereof, and that the registration of the same has been made as required by law, and requesting that their title thereto may be confirmed, shall cause a summons, under the seal of his court, to be issued, requiring all persons interested to appear at a day named therein, and which shall not be less than sixty days from the day the same was issued, and show cause why the title of such complainants and claimants should not be confirmed, a copy of which complaint and summons, duly attested by the Clerk of the Probate Court, shall be published twice in the Territorial newspaper, and be kept posted in the office of said Clerk from the day of issuing the same to the return day thereof; and if no person shall appear on such return day to contest the right of the claimants to such claims, the Judge of Probate shall examine all the records filed in the office of his Clerk relating to such claims, and if he finds that the said claimants have in all respects complied with the provisions of this chapter, he shall make a decree in substance that the complainants, having complied with the laws of this Territory relating to the denouncement and registration of mines, have acquired a perfect title to their claims (describing the same) until the 1st day of January, A. D. 1868, and forever after unless abandoned by them. And the said Clerk shall give the said claimant a copy of such decree, under the seal of the court, which shall be conclusive evidence of title in any proceedings relating to such claims, until they are abandoned. And unless the persons adversely interested, and contesting the title of the complainants, shall appear on the day named in said complaint and proceed as hereinafter provided, they shall be forever barred from contesting the title of said complainants to such claims. And if the contestants shall so appear they shall on that day or some day to be fixed by said Judge proceed to file an answer, setting forth their claim and case, and the proceedings shall then be conducted in conformity to the provisions of this chapter and the code of civil practice. And whenever a final decree is made thereon, determining the title to said claim or mine, by said Judge; or by any other court on appeal, the said Judge shall cause a record to be made in the office of his Clerk of such decree, and a certified copy thereof may be made as aforesaid, with the like effect. And any claimants of mineral lands who, before this act takes effect have in any way, or under any law, acquired a title to such mineral lands, after filing with the Clerk of the Court their evidence of title and description of claim as required by this chapter, may cause an examination of the shaft sunk by them or other work done by them, to be made as aforesaid, and take the like proceedings for the confirmation of their titles, with the same effect: *Provided*, This section shall not apply except when the complainants are in possession of such mine or mining rights, claiming title thereto.

Indian Troubles May Extend Time.

30. By reason of the Indian wars and unsettled condition of the country, the time within which a shaft is required to be sunk, or other labor performed on a claim, shall not commence until two years from the day this act takes effect, and all the provisions of this chapter relating thereto are suspended for that time; but any claimant may sink a shaft or do such other labor, and at any time after the record of their claims with the Probate Court, and thereupon institute proceedings to confirm their titles, and be entitled to all the rights and privileges provided for in this chapter.

Consolidating for Developments.

31. No single person or company shall be compelled to sink shafts, or make other improvements on more than one of the tracts of land claimed by him or them for the same vein or mineral deposit, and any number of claimants on the same vein or mineral deposit, who may unite for said purpose, shall be allowed to concentrate labor, capital and energy to any one single point which to him or them shall be best suited to ascertain to the best advantage the general character, quality and capacity of that particular vein or mineral deposit, and may take the like proceedings to confirm their titles.

How to Continue Legal Right to Claims.

32. After the work required by section 28 of this chapter has been performed, and the record thereof made as therein provided, two years shall be allowed the claimants of mineral lands to develop the same and procure machinery and provide for working the same, and during that time the same shall not be considered abandoned although no work be done thereon; *Provided*, That in such an event they shall, annually, and before the first day of June in each year, file with the Clerk of the Probate Court an affidavit, signed by them, that they have not abandoned such claims, but intend, in good faith, to work them; and said term of two years shall not commence until the first day of January, A. D. 1868. And after the expiration of said term of two years, it shall be obligatory upon claimants to such mineral lands to hold actual possession of them, and work the vein, which obligation shall be considered as complied with by doing at least thirty days' work thereon in each year; but if such claimants are prevented from working such vein by the hostility of Indians, or other good cause, rendering said working difficult or dangerous, they may, by authority of the Judge of Probate first obtained, be relieved from performing labor thereon from time to time, but for not more than one year at any one time during the continuance of such cause.

33. Any person who may discover a mineral vein or deposit, as aforesaid, which is not included within a mining district, or which may be in a mining district in which there is no legally authorized Recorder, may acquire title thereto, and to auxiliary lands, by giving notice as aforesaid, and recording the same with the Clerk of the Probate Court of the county in which the same is situated, and may take the same proceedings, with the like effect, with the Clerk of the Probate Court that are required to be taken with the Recorder of a mining district.

Owners of Private Lands shall be Compensated by Miners.

34. Discoverers of mines on lands in the legal ownership or possession of others, and not public lands, before doing the work of sinking the shaft required by section 28 of this chapter, shall pay to such parties such compensation for the use of the same as may be awarded by the Judge of Probate, upon complaint of either party, or shall give bonds to such parties for payment of the same, and sureties, to be approved by said Judge, and whenever it becomes necessary or advantageous to construct tunnels for the purpose of drainage, ventilation, or the better hauling of ores or other subterraneous products or mining materials, it shall be lawful for any party or parties to construct such tunnel or drift through all private and public property; *Provided*, That all damages arising from such subterranean works to the other parties, to be determined as provided above, shall be paid by the parties for whose benefit such tunneling is done, to be paid before said work is commenced, or security given, to the satisfaction of the Judge of Probate, for payment of the same; but no damages shall be paid on public lands when claims for such lands shall be set up after such tunnel shall have been projected or actually in process of construction; *Provided*, That the lapse of time between projection and actual work shall not exceed ninety days, and that the tunnelling parties give timely notice of their project to any new claimants of the so affected ground.

Privilege of Neighboring Owners.

35. Whenever such tunnel as mentioned in the preceding section shall intersect or traverse mineral deposits, or run along lodes claimed and held by other parties, then it shall be at the option of the owners of such other mineral deposits either to pay one-half of the expense of excavation for the distance that such tunnel runs through their mineral deposits, and secure the whole of the ores excavated, or to divide the ores with the tunneling parties, the latter paying all expenses of excavation, or it shall be optional with either party to abandon all claim to the ores excavated.

Ownership of Blind Ledges.

36. If, in the construction of such subterranean works new veins or deposits are encountered in ground not claimed or owned by other parties, they shall become the property of the party for whom such tunnel is constructed, and shall be denounced and registered as is required of new mines, and shall be governed by the same laws as are prescribed in this chapter.

Claims Forfeited by Non-compliance.

37. Any claimant or claimants not complying with any of the foregoing conditions and obligations shall forfeit all right to any such recorded or unrecorded claims to mineral and auxiliary tracts, and it shall not be lawful for him or them to register such claims anew within a period of three years after such forfeiture. All such tracts shall be free for working and registry to any one but those excepted in this section.

38. All veins and mineral deposits situated on public lands, which have not been worked and occupied from the time of the acquisition of the Territory by the United States up to the time of the passage of this chapter, except as herein provided, shall be considered as abandoned and subject to registry and denouncement.

39. All veins and mineral deposits that have been or may be abandoned hereafter, shall, in all cases and respects, be governed by the laws regulating the opening and working of new veins and deposits, as prescribed in this chapter.

Claimants Re-locating Abandoned Claims must give Previous Owners Notice.

40. Whenever any mine, vein or mineral deposit shall have been abandoned, or forfeited, in accordance with the provisions of this chapter, and registered anew by other parties, it shall be obligatory upon such parties to give the former owners warning thereof, so as to remove from the tract, within the space of three months anything he or they may claim as valuable or useful. Such warning shall be given in the nearest newspaper published in the Territory, and by posting it in three of the most conspicuous places in the county where the mine is situated. Three months after the expiration of such warning any and all buildings, furnaces, arrastras, metals, and every other species of property which may still remain on the ground of such mine, vein or mineral deposit, shall become the undisputed property of the new claimant, without compensation of any kind to any person whatever.

41. Any person taking possession of or entering upon a mining claim or auxiliary lands, registered according to the provisions of this chapter, and before it is abandoned, shall be ousted therefrom in a summary manner by the order of the Probate Judge, and the malfeasor shall be adjudged to pay all costs and damages consequent thereon.

Probate Judge to Decide Mining Controversies.

42. All the proceedings in all the causes relating to mines in the Courts of this Territory shall be considered equitable proceedings, and be conducted according to the rules of practice prescribed in equity cases, and the Judge shall hear and determine all questions on their merits and according to the equitable rights of the parties.

43. In all litigated cases relative to mines, the Probate Judge shall take the testimony, or cause the testimony to be taken down in writing by the Clerk, or by a Commissioner appointed by him for that purpose, and certified and filed by him as a part of the record in the case, and whenever a witness is beyond the limits of the Territory his testimony may be taken in like manner as in cases pending in the District Court.

Appeal may be Taken from Probate to District Court.

44. An appeal shall be allowed in all mining cases from the judgment or decree of the Probate Court to the District Court, if taken within ten days after said judgment or decree, the appellant first giving bond, with two sufficient securities to the adverse party, in a sum sufficient to cover all costs and damages, in the discretion of the Court, conditioned that he will prosecute the appeal without delay, and with effect, and pay all damages resulting from the same; and if the appeal is taken after the day of trial and final judgment, then notice thereof shall be given in writing to the adverse party, and on or before the first day of the term of the District Court next thereafter, a transcript of all the papers and proceedings, and the testimony and approved report of the Commissioners taken in the case, shall be certified by the Clerk and filed in the District Court, at the expense of the appellant, and the cause so appealed shall be tried at the next term thereafter, if taken five days before the commencement of said term, and if not taken within that time, then it shall be tried at the next succeeding term.

New Evidence may be Presented to District Court.

45. All cases taken by appeal to the District Court shall be tried on their merits, on the record and testimony as certified to the District Court, and no new testimony shall be introduced unless it is shown in the affidavit of the party applying, to the satisfaction of the Court, that new, important or material testimony has been discovered since the trial before the Probate Court, or could not be procured in season to be used at said trial, and which may change the judgment in the cause, and in that event said new testimony shall be taken in writing by the Judge or Clerk of said District Court, or by a Commissioner, and become part of the record in the case.

46. Writs of error may be taken out, and appeals allowed to the Supreme Court, in all mining cases brought by appeal or certiorari into the District Court, on the same terms as are provided for by writs of error and appeals from the District Courts to the Supreme Court.

47. The District Courts shall exercise a superintending control over the Probate Courts in all mining cases, by writs of mandamus, prohibition and injunction, and writs of certiorari shall issue in all cases to correct and revise their proceedings, in case of neglect or refusal to allow an appeal in accordance with the rules of practice prescribed for the government of the District Courts.

Probate Judge may Appoint Commissioner to Examine Mines, etc.

48. The Probate Judge, in all litigating mining cases, when local knowledge is necessary, may, at his option, or at the request of either party, appoint a commission of three persons skilled in mining, to proceed to any mine or mineral land in question and examine the question in litigation, and make a report in writing, under oath, of all the facts and circumstances bearing upon the question and relevant thereto, and their report shall be rejected or approved, in whole or in part, by the Probate Judge, and if said report shall be approved it shall be certified, filed and made a part of the record in the cause. The said Commissioners shall receive five dollars per day each for their services while necessarily engaged in perform-

(Continued on page 409.)

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, Dec. 24, 1864.

The market during the past week has exhibited some improvement, and a number of leading stocks are in better request at enhanced rates. The severity of the weather in Nevada occasions a little apprehension in the minds of some, but the more sanguine anticipate no future difficulty of a serious nature either in the hauling or the reduction of ores.

City shares are not materially changed but continue to be regarded with favor.

Spring Valley Water has risen to 71 bid, and S. F. C. Water to 55 bid. Rumors are prevalent touching a consolidation of these two companies but the details of this settlement have not yet been made public.

California Steam Navigation is inquired for at 75 without eliciting sellers. San Francisco Gas is held at $80 per share and North Beach and Mission R. R. at 105.

Legal Tender Notes have been active without much variation in price, and $113,000 were sold within a range of 46½, seller 30, and 48 cash, closing at about 47½ bid, and 48 asked. Latest Telegraphic advices from New York quote gold at 222 on the 22nd inst., with an unsteady market.

Gould & Curry has materially improved during the week, advancing from $1,495 to $1,620, declining to $1,585, seller 30, rallying to $1,610, then receding to $1,560, seller 30, and closing at about $1,565. 55½ feet were sold within this range. From the annual reports of the officers of this company, submitted to the stockholders on Monday last, we gather the following. The mill is now complete in all respects and with 80 stamps and 40 Hepburn pans, is reducing from 90 to 100 tons of ore daily, and at an average cost of some $12 per ton. The entire yield of the mine in bullion, for the past year, amounted to $4,898,000, and from December 1st, 1863 to December 1st, 1864, some 65,000 tons of ore were produced, 57,638 tons averaging $58.38 and 8,820 tons $172.14 per ton. The extraordinary expenses of the company during the past year, chiefly incurred in the construction of their mill, were $560,000; and $135,000 were disbursed in the settlement of adverse claims for litigation, &c. The total expenses of the mine amounted to $770,000 and some $500.000 were paid out for reduction expenses, labor, quicksilver, wood, salt, sulphur &c. The dividends declared from Dec. 3d, 1863, to Dec. 3d, 1864, amounted to $1,440,000 (being about 35 per cent. of the gross receipts of the mine) after deducting all expenses and extraordinary disbursements throughout the year. The President is of the opinion that monthly dividends of $50 to $75 per foot can be easily paid the ensuing year. With the present facilities, and the application of greater economy in the various departments of the company. it is believed that 45 per cent. of the gross proceeds can now be saved. The assets of the company are valued at $1,106,000, including 2500 tons of ore on hand at the dump pile (at $40 per ton), and 5000 tons of tailings at the mill (estimated at $30 per ton). The Superintendent reports the total amount of ground excavated during the year, at 1,234,000 cubic feet, or a cubical mass of 108 feet. He estimates the ore within sight at 17,000 tons and places the entire cost of mining, reduction, hauling, taxes, &c., at $25 per ton. The salary of the new President of this company has been fixed at $5,000 per annum in lieu of $10,000 formerly paid.

Savage has continued to improve, advancing from $1,650 to $1,725, receding to $1,690 and closing at $1,750 asked. 18 feet have been sold. To facilitate the settlement of accounts for the year, this month's dividend of $75 per share has been anticipated and is now payable. The mine, at this time, is believed to be in a very promising condition and receipts for bullion are up to the usual average.

Challar has attracted more attention this week, and 49 feet were dealt in, opening at $1,025, buyer 30, receding to $985 seller 30, then steadily advancing to $1,045 cash, and selling yesterday at $1,060, b 30. The lode in the south mine continues to increase in length and now discloses a larger body of ore than ever before, and in the 5th level of the north mine it is said that some important developments have been made this week. The production of ore for the current month will amount to some 5000 tons and a large number of mills are actively at work for this company. The average yield is now about $45 per ton.

Yellow Jacket is in rather less favor and seven feet were sold, declining from $840 to $820.

Potosi is also less firmly held at about $740 with $665 bid. The suit of this company with the Bajazet will be tried on its merits before a jury on Monday next.

Empire Mill & Mining Company remains inactive, but is held at $500 per share. Professor Silliman estimates the amount of ore remaining above the 245-feet level at 40,000 tons, and as worth some $30 per ton. The reserves between the 345 and 445-feet level are estimated at 50,000 tons, valued at $50, in addition to which another reserve of 3,000 tons is thought to be worth $90 per ton. The total reserves above the lower level of the mine are valued at nearly *four million dollars*. The same authority states that the bullion receipts of the company amounted to $1,043,720.48 from March 1, 1863, to Nov. 30, 1864, being the product of about 25,000 tons—averaging some $40 per ton. The loss in tailings is assumed to have been one-third of the total value extracted. The entire cost of timbering, mining and hauling is estimated at $5.50 per ton, and the total expense of reduction is stated to be $11.50—in all, $17 per ton. $731,000 have been expended in opening the company's mines and in the erection of their mill, machinery, etc.; $332,000 have been disbursed to stockholders, including the December dividend of $24,000. The mill and improvements have cost some $200,000.

Ophir is in less request, and 24 ft. have been sold, declining from $420 to $360. The Secretary of this company, in his annual report, states that the receipts of bullion amounted to $1,012,365 during the past year; the disbursements were $1,001,547.06, including $67,200 for dividend No. 22. 18,600 tons of ore have been taken from the mine since December, 1863, 3,345 tons of which were second class, 421 tons first class, and the remainder were third class ores. Of the latter, 5,600 tons were sold, and the balance was worked by the company, at a cost of about $32 per ton, by the Freiberg process and the patio method. The ores on hand at the mine and mills are stated to be 2,127 tons third class, and 4,000 tons fourth class. The tailings at the Woodworth mill amount to 2,000 tons. At the late annual meeting of this company the management of the past year was severely criticised by a prominent stockholder, and a number of resolutions proposed by this gentleman, imposing new and more vigilant duties upon the Trustees and Superintendent, were concurred in by a large vote.

Hale & Norcross advanced early in the week from $300 to $500, owing to a reported improvement in the mine, declined to $370 on Thursday, and closed at $325 bid.

Uncle Sam was sold at $140 and is now held at $150. The assessment of $100 per share, levied November 3d, has been rescinded and one of $60 per share (San Francisco incorporation of 2000 shares) was levied December 20th, in lieu thereof. Overman has met with no sale.

Upon the execution of a mandamus, the Trustees of this company permitted an examination of the books to be made by the San Francisco committee of stockholders, and a report will be forthcoming at an early day. It is said that the affairs of the company will be thoroughly ventilated.

Imperial is in less favor and 312 shares were sold within a range of $120, buyer 30, and $108 cash, closing at about $110.

Burning Moscow has continued to be actively dealt in and 3650 shares have changed hands at rates less variable than formerly, and closing at $34½.

Bullion has also been active and 372 shares were sold, advancing from $115 to $125 buyer 30, receding to $115 cash, and selling yesterday at $115@$118, closing at $120, buyer 30.

Nevada, (J. G.) declined from $35 to $30, advanced to $37½, buyer 30, receded to $32½ and rallied to $40, buyer 30, at which rates 200 shares changed hands.

Wide West has steadily risen from $8 to $21, (assessment of $5 delinqueot). Buckeye fell from $4 to $2½ and rose yesterday to $5. Golden Age & Empire has advanced from $11½ to about $15. Bajazet and Golden Era at $22½@$21. Baltic at $20. Sierra Nevada at $20@$19, and Daney at $15@$31. Sheba fell from 10 to $6½.

The aggregate sales of stocks and Legal Tender Notes, since Saturday last, amounts to $488,696 50.

Sale at 600 dollars up to 800 dollars	7 50 per foot

From $800 to $3,000 per foot, one per cent, on the amount of purchase or sale.

Anything above $3,000 per foot, three-quarters of one per cent. on the amount of purchase or sale.

J. B. E. CAVALLIER, President

BENICIA CEMENT COMPANY.

REPORT BY PROF. LANZWEERT.

To the President and Trustees of the Benicia Cement Company.

GENTLEMEN :—In compliance with your request to visit the Cement Quarries of Solano County, situated near Benicia, to make an analysis of the Cement Stone and products of the Benicia Cement Company's works, I beg leave to submit for your consideration the following report :

In a memoir published by Q A. Gillmore, A. M., under the authority of the Engineer Bureau of the War Department, it is stated that "no deposits of hydraulic or cement stone are found on the Pacific Coast, although inquiries to a considerable extent have been made. The Rosendale cements are depended upon for hydraulic mortar." This must certainly account for the shipment from time to time to this coast of cement of the Eastern States, although the Benicia Cement Company has manufactured for several years past a hydraulic cement, which has not only been used extensively on this coast in various constructions, and sustains its reputation in comparison with that imported from the Eastern States, but is growing daily more and more in favor with our builders. As no analysis of the Benicia cement stone has ever been made or published before, to my knowledge, there is very little doubt in my mind that when the composition of the Benicia cement stone shall be known, that the importation of Eastern cement will cease altogether, as not only the Benicia cement stone is superior to any quality from the East, not liable to be kept on hand for several months, neither having to be exposed to a damp atmosphere during a long sea voyage, absorbing moisture and carbonic acid gas and is thereby rapidly deteriorated, but also the late increase and improvements made at the company's works, able now to supply fully the wants of the trade. Several quarries of hydraulic cement stones are found in the vicinity of the Benicia Cement Company's works; no regular veins of this stone have yet been traced and it is impossible to estimate satisfactory the extent and capacities of their quarries, as I am not aware that our State Geologist, Professor Whitney, has ever made an examination of them with that end in view. However, the deposit of cement stone is very large and seems to be in two principal layers, one of which furnishes a very *quick* and the other a more *slow* setting cement.

In mixing these two qualities of stones together, in nearly equal proportions, according to my experiments, a better cement is obtained than of either of the layers used alone.

Besides the different quarries from which the stone is at present derived, there are several outlying cement strata or perhaps other out crops of the same strata nearly intermixed with layers of *pure limestone*, which previously were added to the cement stone. These stones being less expensive than the former, possessing very little hydraulic properties, should very judiciously have been excluded, as they are a hindrance to the quality of the cement. In these quarries, the stones only occupying a central position can be relied upon for *hydraulic cement*, the layers above being as a general thing, too highly charged with carbonate of lime, while those below contain too much clay or sand.

Cement Stones.

The Benicia cement stone has a fine grained texture, yielding readily to a file or sharp pointed instrument, generally of a light yellow, bluish gray, sometimes of a dark drab color, of a conchoidal fracture and effervescing freely on the application of acids. These stones are easily recognized and distinguished from lime or sand stones, the latter having generally a coarser grained texture or crystalline appearance and crumbling easy between the fingers. The skill and experience of the workmen should be trained, too, so as to detect and throw out those portions of stones which are injurious to the quality of the cement.

In order to secure a degree of uniformity in the quality of the cement as much as possible, great care should be exercised in distributing the different qualities of the hydraulic stone of these quarries in the kilns. The Benicia cement stone, as used now at the Company's works from these different quarries, although assuming, at different points, a remarkable diversity in their physical appearance, according to the different analysis I made of the same, their chemical composition is very near identical. These stones, after proper calcination, are easy to grind, give a *quick* and *energetic* cement, which hardens readily under water. When the calcination is arrested at the point of the complete expulsion from the stones of the carbonic acid gas, and even when suitably *under-burnt* they possess a moderate degree of hydraulic activity.

Analysis.

The Benicia cement stone, according to my analysis, may be denominated an *argillo calcareous stone*, differing by its composition from the Eastern cement stone, which are commonly an *argillo magnesian limestone*, as you will perceive by the following table of analysis that the former does not contain any *carbonate of magnesia* :—

ANALYSIS OF BENICIA CEMENT STONE (RAW).

	Sample A.	B.	C.
Specific gravity	2.685	2 701	2.685
Water (red heat)	4.95	3 30	3.80
Carbonate of lime	78 39	76 95	75.39
Alumina	7.75	6.15	6.00
Protoxide of iron	1.13	1.45	1.50
Peroxide of iron	3.00	3.55	2.28
Silicic acid	8.40	9 85	11.10
Oxyd of manganese	Traces.	Traces.	Traces.

In comparison of the above table of analysis of samples A, B, C, of Benicia cement stone, as a matter of interest I submit here the following analysis of some Rosendale cement, made by Professor E. C. Boynton, Oxford University, Mississippi :—

	No. 1.	No. 2.	No. 3.
Specific gravity	2.844	2.822	2.786
Water at 212°	.20	.80	.22
Carbonate of lime	43.30	30.72	46 00
Carbonate of magnesia	26 04	35.10	17.76
Alumina	2.18	7.52	2.34
Peroxide of iron	1 86	2.38	1.26
Silicia, etc	18.52	19 64	27.74

Without entering, for the present, any remarks in comparison with the above compositions, the following table shows you the mean composition of the Benicia cement stone when burned, having parted with its water and carbonic acid gas, corresponding to the following percentage composition :—

Lime	68.53	per cent.
Alumina	9 29	"
Oxyds of iron	6.08	"
Silicic acid	17.00	"
	100.00	

Thus, according to the above table, the Benicia cement may be properly denominated "*Roman cement*," as it possesses the same chemical composition as the well known cement so extensively used in Europe, under the name of *Boulogne*, or *Portland* cement.—Either natural or artificial, as the following table of analysis will convince, the Benicia cement stone has nothing to fear from comparison :—

	ANALYSIS	
	Of the natural Boulogne stone.	Of the manufactured Portland.
Lime	65.13	68.11
Magnesia	.58	—
Alumina and oxides of iron	13.87	10.30
Silicic acid	20.42	20.67
Sulphate of lime	Traces	
	100.00	100.08

Selection of Cement Stones.

As already stated in the beginning of this report, whereas the Benicia cement stones occur in distinct and easily recognized layers, which retain, with little variation, a well known and specific character, whether good, bad, or doubtful, and which can readily be separated from each other. The practical difficulties to select the same are comparatively few, and require simply for their removal the employment of reliable and faithful workmen, who will exercise the precaution in rejecting those stones which are unfit to be mixed with the real cement stones.

Burning, or Calcination.

To know the intensity and duration of the *heat* for the burning of the Benicia cement stone, a number of experiments were made, so as to regulate the necessary heat and obtain results that should be uniform, or at least approximating thereto, so as to manufacture an uniform cement. The different qualities of stones were calcined, or burned, and by the different degrees of calcination the following results were obtained :—

Sample No. 1—*Underburnt.* These stones contain in the center a small *core* of partially *raw stone*, retaining nearly their primitive color, are easily recognized by their hardness and density. When reduced to powder, they set very slowly under water.

Sample No. 2—*Complete calcination.* These stones are generally lighter than the above, of a darker color, presenting, on cooling, a net of cracks, and bursting to pieces. Reduced to powder, sets readily under water, and becomes very hard.

Sample No. 3—*Overburnt.* The appearance of these stones seems to be glazed over, and occurs generally in masses pasted together, are easily distinguished from any of the above. Their color is of a dark brown, approaching to black, very hard to reduce in powder, and when in that state, mixed with water to a stiff paste, they set readily under water, but in a few hours become converted into a thin paste, and are unfit for hydraulic use.

A complete calcination, as sample No. 2, is necessary to obtain from the Benicia cement stone its state of maximum energy. Thus the intensity of *heat* necessary to obtain the full hydraulic quality of the Benicia cement stone is sufficient at the expulsion of the carbonic acid gas of said stone. I must observe that the proper calcination of the cement is an operation of the utmost delicacy, and one requiring, on the part of the manufacturer, a high order of intelligence, experience and skill, in order to avoid the production of an inferior quality of cement, as many causes exist to a certain extent, are more or less under the control of the burner, such as variations in the force of the draught through the kiln, due to changes either in the direction and force of the wind, or in the barometric state of the atmosphere; neglecting to draw the burnt stone with the requisite care; taking perhaps equal quantities at stated times, which may be either too much or not enough; depending on circumstances; not preserving the proper proportion between the fuel and raw stone, when adding these at the top or not adding them at the proper time and in suitable quantities; irregularities in the settling of the stone in the kiln at each drawing, which results in some portions being exposed to the heat a much longer time than others; the formation of "cinders" or vitrified pieces of stone, which adhere together or to the side of the kiln, choking the draught and retarding the expulsion of the carbonic acid gas.

Benicia Cement vs. Eastern Cement.

In order to be able to detect, recognize and compare the *hydraulic quickness* or *activity*, the *hydraulic energy* or *power* of the Benicia cement in comparison with others, a series of trials was made with two *testing wires*, differing in their size and weight, such as recommended and used by General Totten for his experiments carried on at Fort Adams, R. I. As some manufacturers grind their stone habitually finer than others, and as there is considerable difference in this particular in cement from the same mill, manufactured at different times, it was important that this cause of variation should be eliminated in all the trials. To this end all the samples subjected to trials were passed through a fine wire sieve of 6,400 meshes to the superficial inch (No. 80). It would be superfluous to transcribe here the many results of these different trials; suffice it to say, that nearly in all them the Benicia cement did give the best results, and, to corroborate furthermore these tests, each sample was compared with the same cement when mixed with one to twice its volume of sand.

Table

Giving the time of different qualities of cement, in setting in the air and under water, able to support respectively the two testing wires—one 1-12 inch wire weighing one-fourth of a pound and the 1-24 inch wire weighing one pound :—

SAMPLE	COMPOSITIONS.	TIME SETTING IN THE AIR.		TIME SETTING UNDER WATER.	
A	Benicia Cement	.3	.5	.8	.10
B	Do do.	.10	.12	.12	.15
&c.	Do. do.	.25	.30	.20	.50
D	Mixture of above samples	.50	.60	1h.20	1h.25
	Roman Cement	.30	.40	.45	.60
	Eastern Cement	.60	1h.20	1h.50	2h.10
	Benicia Cement D, 1 vol.) Sand, 1 vol.)	1h.20	1h.50	2h.40	3h.10
	Benicia Cement D, 1 vol.) Sand, 2 vol.)	1h.50	3h.10	4h.10	5h.25

From three samples of Eastern cement received, two were entirely unfit and the third, when mixed in paste and immersed under water, became entirely covered by a net work of cracks, and in a few minutes lost all of its hardness, several causes may be attributed to that effect, namely, having lost its energy by a too long exposure or being a spurious article shipped from the East. I did not see the necessity to analyse the sample, the comparative test not warranting it. To determine the tenacity, the relative hardness, the adhesive properties of the Benicia cement, several samples were prepared so as to submit them to efficient tests, and as none of these qualities can properly be ascertained than after an exposure of the cement in the air or under water at least a hundred days or upwards, time was no allowance, so that no precise data of the same could be given yet, in comparison with other known cements.

Hydraulic Activity.

The Benicia cement through its *quick setting* when adapted to submarine constructions or foundations subjected to immediate immersions is unsurpassed by any material of the kind hitherto employed for such purposes in this or any other country, and its use therefore, has been partially objected too, where a very quick induration is not so specially important, and in the trouble in making large quantities of mortar, the objection of the above can be easily remedied by allowing these mortars to remain mixed for some time before tampering them just previous to use, a precaution which rests upon a plausible, and doubtless, a sound theory. This *quick setting* may be due in not observing the necessary proportion of water in making mortar, as it is also found in practice, that cements vary very considerably in their capacity for water, and that fresh ground cements require more than those that have become stale. An excess of water is, however, better than a deficiency, particularly where Benicia cement is used, as the capacity of this substance for solidifying water is great. A too rapid desiccation of the cement might involve a loss of cohesive and adhesive strength, if insufficient water is used.

Conclusions and Suggestions.

The arrangements under way at the company's works for the manufacture of *drain pipes*, recently quite extensively applied to drainage and sewerage purposes, shows another of the many uses to which the Benicia cement can be employed, being the best material for that purpose. An abundance of material exists in the neighborhood of the company's works which could be available at a trifle expense; these materials may be used together with a suitable proportion of cement, forming then what is known under the name of *Concrete* or *Beton*, and is applied in that state for foundations in damp and yielding soils and for subterranean and submarine masonry under almost every combination of circumstances likely to occur in practice and is considered superior to brick work in strength, durability and economy, even in some exceptional cases, is considered a reliable substitute for the best stone, while it is almost always preferable to the poorer varieties. Within the last ten years, the practice of building concrete houses with hollow walls, has received considerable attention both in the United States and in Europe. In Sweden and Northern Germany it is quite common. The facility with which the fire, smoke and ventilating flues can be arranged in the wall, by using movable tubes, during the progress of construction, the partial immunity from risks from fire, the security against the ravages of rats and other vermin, and the equality of inside temperature through sudden changes of weather, secured by this method of construction, judiciously followed, specially recommend it to the attention of architects and builders of this coast. As yet no definite compound has been discovered for the perservation of wood used for our *wharf-piles* from its destruction by worms, although silicatization has lately been revived here, which for that purpose has been abandoned in Europe; a few comparative experiments at the company's works, possessing all the advantages, should be made for the manufacture of *concrete piles*, the substitution of wood by concrete piles will prove another feature of the use of the Benicia cement, and thus avoid all these disasters so lately occurred of the falling of the wharf due by these terrible worms in destroying the wooden piles.

In conclusion with the facts and statements of this report :

1. I find that large deposits of real hydraulic cement exist on the Pacific Coast.

2. That California is no more depending upon the Rosendale cement for hydraulic mortar.

3. The Benicia cement by its chemical composition proves a "Roman Cement."

4. That the cement now manufactured by the Benicia Cement Company is not only guaranteed against any imported known brand or manufactured here, but is superior in quality, as it is fresher and uninjured by sea voyage or long storage.

5. That the Benicia Cement Company is able now to supply fully the wants of this coast with a better and cheaper article than can be imported and as a new home industry the Benicia Cement Company by its product, proves again that, for manufacturers, the *California Cement* can compete with any kind, either domestic or foreign. Respectfully submitted by

Your obedient Servant.

L. LANSZWEERT.

San Francisco, December, 1864.

IN the Norwegian mines a singular and striking custom is observed in paying the weekly wages of men there employed. They all present themselves on the Saturday evening to the inspector, who hears from each man the number of hours he has worked on the successive days of the week past, compares the total given with his own notes on the subject, and having settled the account, calls the miner, bids him turn around, and writes in white chalk on his black back the amount due him. Thus mysteriously numbered, the man has to go to the cashier, who also turns him around to look at the figures, and pays him without his having a word to say. The method is an expeditious one—two or three strokes of chalk settle the matter; it is prudent, for the miner has no chance to alter a figure in his own favor, and economical, for a brush removes all trace of the inscription, and the same black jacket is ready for the next Saturday.

GOLD IN VERMONT.—The Irasburg *Standard* says: We were last week shown specimens of gold taken the week previous in Troy, by Mr. Albert Hobsden, of that town, who dug about twelve dollars in three days; the gold is quite fine. He has bonded some seven hundred acres of land, and is making extensive preparations to mine it next summer.

CORNISH MINING.—There are upwards of three hundred mines at present at work in Cornwall, employing, directly and indirectly, upwards of 100,000 persons. In them at least £20,000,000 of capital is embarked, so that the magnitude of the interests at stake, and the importance of the prices of metals permitting them to be worked at a profit, will be readily appreciated.

Communications.

In this Department we invite the free discussion of all practical subjects—correspondents will please confine themselves to the facts and theories of any advance.

Written for the Mining and Scientific Press.

The Sierra Nevada Mine, Comstock Ledge.

Eds. Mining and Scientific Press:—What is the matter with this mine? With the evidences of richness heretofore found in this mine, why have they not succeeded in finding paying ore in quantities? From a brief paragraph in a late number of the Virginia City *Enterprise*, stating that the ledge is found to run more to the east than was supposed (it heretofore having been thought to run north through Cedar Hill), it would seem that, at length, after two and a-half years' useless delay, the truth is beginning to dawn upon the owners of that mine. But, as this discovery is only an intimation of the facts which need to be known, I therefore propose to lay before your readers, and the stockholders, a few facts, which must stand in the light of prophecy until further exploration shall prove or disprove them.

From the Ophir, northerly, this ledge instead of running—as has generally been supposed and contended for—north, somewhat westerly through Cedar Hill, runs northeasterly, inclining still to the east, in a crescent form, until it at length terminates, as I think, in or in the vicinity of the Lady Bryan mine, in Flowery district. It is also a peculiarity of this ledge (indeed of all true metal bearing veins), that every 1,500 to 2,000 feet, or thereabouts, from the strongest point of upthrow, the ledge will again crop out, which outcrop may perchance be concealed from view by the debris from the higher land adjoining, as in the south chimney of this mine, on which all their work has hitherto been done; whereas their north chimney, lying so far to the east of its supposed location, although plainly cropping some feet high upon the surface, has hitherto, and for aught this writer knows, may still be unnoticed and unworked. It is plainly to be seen about two hundred feet westerly of the stone foundation of the partially-erected mill in the ravine to the east and south of the company's works.

The Sierra Nevada Company have two mines on their claim, each probably, with a little exaggeration, as valuable as the Ophir in its palmiest days; but as they failed to read what is plainly written on the rocks in their branch tunnel from the Cedar Hill tunnel, they have spent two and a half years, and at least $150,000 in vain; whereas thirty days' time and probably $2,000 cash would doubtless reveal to them Ophir ore in quantities. It is not depth which will find it—that only adds to their difficulties at present. The truth is about this: the east side of the ledge dips slightly, but persistently, west, but the west side dips east, thus narrowing as it goes for a while. Hence, for a distance, the deeper a perpendicular shaft is sunk the greater the distance a tunnel must be run from the bottom. Again: if the course of the ledge is northeast, as I contend, then the tunnel must be run due southeast. Again: in this true silver mine, the silver ore, in paying quantities, lays in chimneys, and does not follow the ledge, as the gold usually does in gold quartz mining. At all parts of a true gold ledge the gold, in greater or lesser quantities, will be found disseminated through the entire body of quartz rock.

To further elucidate, the Central adjoins the Ophir on the south, and has always been essentially barren of silver ore in quantities. Beyond the Mexican, north, the Ophir yielded rich ore for about fifty feet in surface length, and north of that perpendicular line essentially no ore has been found. The same feature is found in relation to the Gould & Curry and Savage mines, which together occupy the next chimney south, and also the Potosi, which has an entire chimney to itself. The space between these respective chimneys is unproductive to the present depth of exploration, but at a greater depth the ore will doubtless be found continuous. Hence, if the pay ore is in a particular and exact locality in this mine, and a long tunnel is to be run from the bottom of their deep shaft, and it is run due east instead of southeast, they would be almost sure to miss the pay portion, although they might find the ledge, and then exploration must be recommenced by running a tunnel lengthwise the ledge, with cross drifts occasionally, hoping at length to find it.

This random rambling mining is precarious, expensive and discouraging, as that company, above all others in Washoe, well know to their cost. Hence a drift run southeast from the proper point on the ledge, in the Cedar Hill branch tunnel, is all but certain to find rich pay ore in quantities in a very limited time, and thus would be added two more productive mines to the already increasing list of Washoe. If my observations are correct, that the ledge outcrops repeatedly every 2,000 feet or so, then between the north chimney of the Sierra Nevada and the Lady Bryan this ledge should be again and repeatedly found. On examination, the croppings plainly show that it is to be found in two localities, both of which are still unworked and unlocated. O. W. Easton.

San Francisco, Dec. 17, 1864.

Written for the Mining and Scientific Press.

The Force Required to Freeze a Ton of Water.

Editors Mining and Scientific Press:—It is stated that by means of the ice-making machine lately invented in England, a ton of ice can be produced at a cost of 4s. I have endeavored to calculate the amount of force which it would be necessary to expend, in order to freeze a ton of water. I have made no allowance for friction or other unavoidable losses, yet the result, viewed in the light of the foregoing statement, is rather startling. Taking Joule's equivalent (772 feet lbs.) as the mechanical representative of 1 degree of heat in 1 pound of water, it would require to reduce a ton of water at 62° to 32° a force of 772x2000x 30=46,320,000 feet pounds. Now it takes 142.-65° of heat to convert a pound of ice at 32° into water of the same sensible temperature, from which it follows that to convert a pound of water at 32° into ice would require the abstraction of the same amount of heat, whence 142.65x2000=285,300° must be taken from a ton of water to produce the same effect. This, according to Joule's equivalent, is equal to 772x285,300=220,251,600 feet pounds, which, added to 46,320,000 feet pounds, makes a total of 266,571,600 feet pounds required to make a ton of ice from a ton of water at 62°. This is equal to 10 horse-power during 13.46 hours! Can this be done in England for 4s., or is Joule's equivalent erroneous? C. A.

A Frenchman has invented a process whereby from a photograph a clay model may be mechanically and accurately cut, from which a plaster cast is produced, which is a life-like resemblance of the sitter. The photograph is taken in a circular room, every part of the person being photographed at the same instant. A statuette, or half-sized bust, is produced, at the will of the sitter. The name given to the new art is photosculpture. A London house has attempted the thing, but as compared to the French, the works produced are poor and clumsy. The expense of the first cast is fifty dollars, each duplicate being five dollars.

More Camels Coming.—J. W. Fabens, of New Jersey, seems determined to establish a camel express and freight line, across the plains, between this State and the Missouri river. A number of the animals have already arrived in New York from the Desert of Sahara. They were shipped at Algiers for Marseillaise, traveled through France on foot and by railroad to Havre, and were there shipped for New York, but owing to the breakdown of the steamship on which they were embarked, put back to Cork, and were then transported to London, whence they were taken to Southampton, and finally shipped to New York. The *Herald* says: "It is Mr. Fabens' intention to import next season a large number of these valuable animals, for use on the plains, and particularly to establish an armed caravan line between the Missouri river and our western gold-bearing Territories. They will undoubtedly do good service in aiding the settlement of that region, besides adding a new and picturesque feature to the magnificent landscapes of the far West." Mr. Fabens' venture gives promise of being somewhat more romantic than profitable.

MORE ABOUT WATER MEASUREMENT.

Editors Mining and Scientific Press:—In reply to Mr. Deetken's communication, entitled Practice vs. Theory, which appears in the Scientific Press of December 17th, you will do me the favor of republishing the following extract from an article that appeared on page 203 of the Mining and Scientific Press of date September 24th, 1864. Not that I ask it as a merely personal favor, but from the fact that, as it has evidently escaped the notice of Mr. Deetken, it has probably escaped the notice of many others, and its importance is a sufficient reason for a re-publication. But I hope "our next Legislature" will not bother themselves about it, especially as it is now settled (so far as calculating power of machinery is concerned), by having been adopted by the principal machine-shops of this city, and has now become the custom, to consider an inch of water (miners' measure,) equal to $23\frac{1}{4}$ cubic ft. per minute, or 145 lbs per minute. By this Mr. Deetken will at once see that I made no mistake in my first communication; and it gives me pleasure to admit that Mr. Deetken is also correct in his statement as regards the amount of water the miner is most likely to get when buying it under ordinary circumstances. The following is the paragraph above alluded too:—

At a meeting of persons interested in mining and mining machinery, held at the Mechanics' Fair Pavilion, on Wednesday, September 21st, 1864, a discussion arose as to the necessity of having some standard as to what should constitute a miners' inch of water. It was finally agreed (without regard to what ditch companies may sell as an inch of water) that in calculations for the construction of machinery, a miners' inch of water shall equal the amount of water that will pass through an opening one inch square, under a pressure of six inches, measured from the center of the orifice: or a body of water 336 feet long and one inch square, the amount which will pass through said orifice in a minute; or 145 86-100 lbs of water passing a given point in a minute; or 17 4054-10000 U. S. standard gallons of water passing a given point in a minute; or 2 333-1000 cubic feet of water passing a given point in a minute.

Mr. Deetken's greatest mistake is in supposing me to be a novice in buying water for mining purposes; perhaps I am, but as I began to take lessons in "the buying of water" from ditch companies in the spring of 1853, and followed it up pretty steadily until the spring of 1862, (the bills running as high as 300 inches per day,) I do not think I will require any more lessons yet awhile, especially, as I know that the amount of water, will as frequently fall below Mr. Deetken's calculations as go above it. The present question, however, is not between ditch companies and their customers, but merely as to what amount of water is meant, by a very ambiguous term that has come into general use, in speaking of water power, in much the same way as did the term horse-power, in speaking of steam engines. Now a horse may not be able to raise a weight of 33,000 lbs one foot high in one minute, but in machinery, that is a horse-power, so in water-power. A ditch company may give its customers more or less than 2 2-3 cubic feet, or 145 lbs per minute, just as the parties can agree on that point, but that is the amount now understood by machinists to be an inch of water, without regard to its manner of measurement; and whether right or wrong, it is now beyond the power of any one to change the meaning attached to either term, and it is just as well to accept both as correct. The quantity of water, that will discharge under a given pressure (say 6 inches) through a certain orifice, depends greatly on the following circumstances, viz:

1st. The relative size of orifice—a large orifice discharging more water in proportion to its size than a small orifice, other circumstances being the same.

2d. The velocity and direction of the current before reaching the orifice.

3d. The nature of the bottom and sides of the box, flume or ditch near the orifice, and whether or not the discharge is perfectly clear of back water.

4th. The position of the orifice, whether in the side or bottom of the box.

As, under certain circumstances where water is used to drive machinery, it would be very desirable to ascertain the exact amount used, without resorting to very scientific theories or complicated experiments, I will suggest a simple way of measuring, that will be sufficiently accurate for all practical purposes, as follows:

Make a box like a section of a common flume, closed at both ends, let it be two feet wide and fourteen inches deep, and divide it into compartments each twelve inches in the clear. Now each one of these compartments, will hold, when full of water, and as many of them as the stream used will fill in one minute, will be the number of inches of water (miners' measure) in the stream, as understood by machinists.

For illustration, suppose a mill man, should contract with Messrs. Hansbrow & Redding, Fredenburr or Fauchery, or with another party (whom I will not name, as it might look like fishing for a gratuitous advertisement,) for one of their Hydrostatic Engines or Water Wheels, and the said Engines or Wheel should be guaranteed to perform a certain amount of work, with a given quantity of water (miners' measure). In such a case it might be very necessary to all parties that there should be a definite, well understood standard of measure, not subject to accidental variation or the private rule of any ditch company or neighborhood custom.

A singular fact—who can explain it?

But, friend Deetken, there is one peculiarity about measuring water to miners, that I would really like to have explained, and the heading of your article reminds me of it, for it is certainly a case of "Practice vs. Theory." Now it is a well understood fact, (by the patrons of "some" ditches, I cannot say whether of all or not) that, when one or two companies of miners stop working or buying water for a few days, all the other patrons of the ditch, have to buy more inches of water to do their work, than they did when all were using water from the ditch. Now theory would appear to say that when nine claims were using water that had been divided between ten, the measure would be more in accordance with scripture, that is, full and running over, especially when the order and charges were for the same number of inches as when all were at work, since the ditch company would have an extra head of water, with which to show their love of christian measure. But what miner, I would like to know, ever saw the penstock of his hydraulic overflow the day after one of his neighbor miners had quit buying water, or any other day after until he had increased his order for more inches; although his first order was sufficient to keep his penstock full and overflowing? Who can solve the riddle? Perhaps, the man who writes the commercial anecdotes. And does friend Deetken think I would be benefited by more practical experience in buying water from ditch companies. I should be pleased to make the acquaintance of Mr. Deetken, for it is really pleasant to meet a man who thoroughly understands what he attempts to talk about, and I am convinced from seeing several articles from his pen, that Mr. Deetken does understand his subject, though misunderstanding my meaning in my "growl" at the report of the committee.

T. McA.

Tempering Castings of Steel and Homogenous Metal without Mechanical Compression.—Mr. Joseph Whitworth, of Manchester (England), proposes to dispense with the ordinary mechanical compression of steel and homogenous metal by the action of steam-hammers, or apparatus of that class, and to give the metal the requisite closeness and strength by casting it in a form approximating to that in which it is intended to be used, and by immersing it without any previous forging in a bath of suitable liquid, such as oil or water, and giving it afterward where requisite, the temper necessary to enable it to be worked. The metal being made by this process so much harder and stronger, it will be desirable in some cases to rough-turn, bore, or shape the casting preparatory to the hardening and tempering of the metal.

It Is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

San Francisco:
Saturday Morning, Dec. 24, 1864.

A MINING CODE FOR ARIZONA.

We are indebted to the Hon. George W. Leihy, a member of the Arizona Council, for a copy of the very excellent mining code recently enacted into a law by the Territorial Legislature of Arizona. As a whole, the law appears to be carefully drawn, comprehensive and liberal. It decrees that all mining ground shall be taken up in square claims, but generally allows an extent of 600 feet to each claim. This mode of location may have many objections, but it certainly will possess the important merit of doing much to keep down the luxurious crop of litigation which the mode of location usually adopted in this State and Nevada has engendered. With an eye to the general interests of the public, it requires discoverers to locate one claim next adjoining the discovery claim for the benefit of the Territory, and with true Anglo-Saxon spirit it provides for the sale of said claim, at a proper time, for the benefit of the Common School Fund. The law gives ample time for stipulated work to be done on all claims, and where the required labor is performed, it provides a cheap and simple mode to obtain a perpetual title. It also provides for a division or segregation of interest where persons owning in common cannot agree to work together, all of which steps can be readily taken by any intelligent citizen. This section is of very great importance, and the need of something of the kind in this State and Nevada is severely felt. As a whole, the law appears to be liberal, clear and simple, and being made uniform throughout the Territory, is, in that respect, far preferable to the multifarious and generally ill-digested local laws which have hitherto prevailed in California and Nevada.

We would suggest that the Nevada Legislature, now assembled, should take up this matter and co-operate in the enactment of some similar general mining law for that new State. It should, of course, be so drawn that, while it might hold out liberal inducements for newcomers, it should at the same time carefully guard the interests of actual occupants and non-residents. Such an act, for both Nevada and California, we believe, would put our mining interests in a much stronger position than they now occupy in the confidence of capitalists, both at home and abroad. We give the law entire, on account of its importance as a matter for general reference.

Extra Number in Volume IX.

In order to commence Volume X of the MINING AND SCIENTIFIC PRESS in the first month of the year (instead of on December 31st), we shall issue a half sheet next week, adding it to Volume IX, thereby rendering our readers an extra No. (27), for which no charge will be made in our subscription accounts. This will also allow our compositors some recreation during the holidays.

HOME FINANCES.

There is very little if any change to note in the condition of the money market. The requirement for steamer day was rather light and those in want were readily accomodated in Bank at former rates, 1½@2 per cent. per month. Trade is dull and a trifling business has been done during the week. Remittances from the country are still backward, but we can learn of no embarrassment in mercantile circles. We are of the opinion that the past year has been one of measnreably prospcrity to most merchants and that fewer losses have been sustained, in credit to the interior as is generally supposed. The new year will open auspiciously for many interests throughout this and the adjoining states and territories, and we may look forward to great activity in every department of business the ensuing spring. Capital is likely to be abundant, and rates of interest will probably be lower than they ever have been heretofore, so that their will be no lack of means wherewith to stimulate the productive industry of the people.

Receipts of bullion from the interior this week amounted to some $900,000. Gold bars have been heavy and dull at about 800@810. The demand for shipment yesterday was moderate. Silver remains at about ½@1¼ per cent. premium for a high grade of bars, and from 1 to 2 per cent. discount for ordinary parcels.

Currency bills on the Atlantic were sold on steamer-day at 110@115 per cent. premium on gold. Telegraphic transfers were current at 3½ ₱ cent. and sight drafts, payable in coin at 1¾@2 ₱ cent. premium. Sterling was dealt in at 48½@49d for bankers, and at 49½d for Commercial Bills.

Mexican dollars have been selling the past few days at 110@111 and were taken for Oriental Markets.

Legal Tender Notes were sold at 48 cents during the week, but are now worth 46@47c. Our latest telegraphic advices from the East quote gold at about 225 on the 22d inst.

THE WASHOE SMELTING COMPANY.

This company was incorporated in the State of Nevada on the 10th instant, with a capital of $100,000. The works and mines of the company are located on Brown's Creek, in a cañon a short distance west of Pleasant Valley. They have two veins, from two to four feet in width, from which they can take almost any quantity of ore, there being but little except highly metalliferous ore in the veins.

This company, according to the Territorial *Enterprise*, have just got their furnace into operation. The furnace is built on the same plan as those of the lead mines at Galena, Illinois, and promises to prove decidedly successful. The first trial gave a bar of 70 lbs weight, taken from 250 lbs of ore. The bar contained a little over $10 in silver. The ore shows a much larger per cent. of precious metals, but it is supposed that the greater part of these remain in the slag, not being melted by the wood fire to which the lead yields. It is the intention of the company to melt their slags in a blast furnace, by which means they expect to obtain a good yield of silver. Their furnace is capable of taking in a charge of sixteen hundred pounds of ore. The gentlemen in charge of the furnace says that he will be able, when in regular operation, to turn out forty bars per day, of the same weight as that above mentioned. The company say they will be satisfied with thirty, which number they feel confident of being able to produce per day. As the silver alone in that number of bars would be worth, at a rough guess, about $300, we see no reason why thirty bars per day should not be perfectly satisfactory to the stockholders. About two and a half cords of wood are consumed per day. The fuel now used is slabs and waste stuff from a saw-mill in the vicinity. It costs the company $2.50 per cord.

AFTER the recent raid on St. Alban's, Vermont, an old gentleman got a rifle shot at the party, as they were leaving the place, and brought down a hat containing eleven hundred dollars.

THE RAIN FALL.

The total amount of rain which has fallen in this city the present season, to date, is within a fraction of 18 inches. The total amount which fell here last Winter was 10.08 inches.

The amount of rain which has fallen in Sacramento the present season, according to Dr. Logan, is 12.839 inches.

The fall in Nevada, according to the *Transcript* of that city, has reached 27 inches.

In Sonora, according to an accurate record kept by Dr. Snell, 29.950, or within a fraction of 30 inches, has fallen—the largest fall recorded in the State. According to the Sonora *Democrat*, more rain fell there in the three weeks prior to December 17th than during the entire of last season. We are without any full record from any other locality.

According to the Los Angeles *News*, some 4⅛ inches fell on the 27th, 28th and 29th of November alone—a quarter of an inch more than fell during the entire of last season. Considerable rain has fallen there, of which we have no accurate record.

At Jacksonville, Oregon, the floods have been greater than ever before known, exceeding that of 1861 and '62. Bridges built fifteen feet higher than the flood of that season were washed away.

A great abundance of rain is one of the prime necessities for California's prosperity. This condition, thus far, the present season, has been most abundantly fulfilled. The average fall of rain in the Sacramento valley and in this city has been about 25 inches for the last fourteen years. Double that quantity usually falls in the mountains along the western slope of the Sierra. The greatest annual fall of rain ever noticed, we believe, was at Mahableshwar, on the St. Ghauts, Asia, in latitude 18°. The amount which falls here is 392 inches per annum. The amount which falls at Cambridge, Mass, in the same time, is 38 inches; in Philadelphia, 45 inches; in St. Louis, 32 inches; in the British Islands, 32 inches, and in Eastern France, 22 inches. The atmosphere in some of these countries is so humid that a much less quantity of rain is demanded for the luxurious growth of vegetation. In the flood winter of 1861–62 there fell at Grass Valley, in this State, about 72 inches of water.

EASTERN FINANCES.

We are in receipt of Eastern advices, per mail, to November 23d. During the week prior to that date the violent fluctuations in the price of gold—declining from 245 to 210 and rallying to 225—had not only checked business very seriously, but assisted materially in arresting the upward tendency in prices. Cotton had declined from $1.43 ₱ lb to $1.30, owing to the fall in gold as well as to rumors that the Government was soon to allow certain parties to enter the rebel lines and become purchasers of this staple in exchange for greenbacks, merchandize, etc. All kinds of rumors are current respecting peace, Cabinet changes, military affairs, etc.; and in view of the Government and military operations, together with the rapid fluctuations in all specie values, it was exceedingly difficult to transact business with any degree of success, or to give a satisfactory review of the market. A large portion of the business community seem to ignore all the laws of trade, and operate according to the dictates of their own individual judgment and without regard to the course or policy of others. Gamblers in gold, stocks, merchandize, etc., were taking new courage from the hesitancy which had marked the conduct of the Secretary of the Treasury. Instead of coming into the market promptly for loans, and taking advantage of the easy condition of the market, and the confidence felt by all classes in the result of the Presidential contest, the New York *Tribune* remarks that the "Department still drifts upon the old and dangerous track of manufactured money." The people of the East now demand more taxes and loans, and the stoppage of the use of so much currency. The policy of the Secretary of the Treasury, it is said, serves to stimulate the disloyal crowd in Wall street to declare that the Government in the future, as in the past, has no remedy but to support itself upon a sea of paper which is to end with an explosion similar to that of Memminger's. Government securities had all been higher, and were firmly held at the advance. The following are the closing quotations:

U. S. 5-20 year 6's (ex. interest)	104 @104½
7-30 Treasury Notes	115 @116
Twelve-month Certificates	96½@ 97
Coupon 6's of 1881	110 @110¼
Registered 6's of 1881	109 @110
5's of 1871 and 1874	100 @101

POTOSI VS BAJAZET.—The litigation in this important case still continues. After the decision rendered by Judge Mesick, as Referee, a motion was made by the Potosi company to set aside that decision, and grant an injunction. This proceeding commenced with the introduction of a witness for the purpose of curing the defect in the deed to the Potosi company, on which Judge Mesick's decision was founded. One witness was introduced that the grantors in part executed before, part at the time of, and part after the date of the act of incorporation. The argument was commenced on Monday of last week and continued until Saturday, when it was suddenly terminated by a withdrawal of the suit. The jury trial is set for the 26th instant when the case will be heard on its merits.

Annual Report of the Gould & Curry Company

The stockholders of the Gould & Curry Gold and Silver Mining Company held their annual meeting on Monday last, at their office, in this city. Reports were submitted by Asa T. Lawton, President, J. M. Shotwell, Secretary of the Company, and Charles Bonner, Superintendent of the mine and mill.

PRESIDENT'S REPORT.

The following are extracts from the report of A. T. Lawton, the President:

After a thorough trial it was found that the Veatch process, first introduced, did not save the metal in the ores satisfactory. All this has been taken out, and the whole works converted into wet crushing, with eighty stamps for crushing and forty Hepburn pans for amalgamating. * * * The mill is complete, and is now reducing from ninety to one hundred tons of ore daily, at a cost not exceeding $12 per ton. * * * At present rates paid in Nevada for reducing ores, the Company must save some $30,000 monthly by owning this mill instead of employing outside mills to do the same work. * * * From December 5, 1863, to June 5, 1864, monthly dividends were declared of $31.25 per share [$125 per foot]. Some time in the month of June the mine was found to look less flattering than formerly, and acting with the advice of the Superintendent, the Trustees decided to reduce the dividend to $12.50 [$50 per foot], and to limit the reduction of ores sufficient to pay such regular dividend, complete the Company's works, carry out a thorough system of exploration of the mine, and pay the current expenses of the Company. This dividend was regularly paid for the following five months. In November, finding the expenses in almost every department were being materially reduced, and the surplus funds of the Company increasing, the Trustees thought it advisable and prudent to increase the dividend to $18.75 per share [$75 per foot]. This was not done, however, until the Superintendent not only recommended it, but also thought the same dividend could be continued.

The gross product of bullion for the past year has been as follows:

From the Gould & Curry mill	$1,786,374 87
From outside mills	3,097,121 93
From shipment of ores	14,563 71
Total	$4,898,060 51

Details of ores extracted from mine and reduced from December 1, 1863, to December 1, 1864:

	Tons.
Ores on hand Dec. 1, 1863	2,827
Ore produced during the year	64,433
Ores reduced at Gould & Curry mill	2,602¼
Ores reduced at custom mills	58,856¾
Ores shipped to England (first-class)	101¾
Cost of extracting ore from mine, per ton	$11 90
Average yield per ton of all ores reduced (56,-459½ tons)	73 48
Average yield per ton of 3,820 tons, 2d class	172 14
Average yield per ton of 57,638 tons, 3d class	58 38
Average yield per ton of ores reduced at Gould & Curry mill	141 75
Average yield of ores reduced at custom mills	57 50
Average cost of reducing at Gould & Curry mill (nearly equal proportion of 2d and 3d class ore)	40 00
Average cost of reducing at custom mills (principally 3d class ores)	26 46
Gross product of bullion	4,833,496 80
Deduct from this for extraordinary expenses disbursements during the year, say for construction of mill	560,893 58
Litigation and adverse claims	135,747 13
Total extraordinary expenses	696,640 71
Ordinary expenses	4,291,419 80
Dividends declared from December 3, 1863, to December 3, 1864	1,440,0 0 00

Being about 34¾ per cent. of the gross receipts of the mine, after deducting the above

mentioned extraordinary items of expenditure.

The financial condition of the company at this date is as follows:

Cash assets and bills receivable	$109,318 56
Our liabilities are	59,471 82
Estimated value of property owned by the Company, exclusive of the mine, at this date—2,500 tons of ores on hand at dump pile at $40	100,000 00
5,000 tons tailings at mill at $30	150,000 00
Inventory of property of all kinds other than ores	896,640 80
Total	$1 106,640 80

In regard to the future prospects of the mine, after carefully perusing the report of the Superintendent, which plainly shows our resources, I am convinced that from $50 to $75 per foot dividend, monthly, can easily be paid for the ensuing year. Should extensive new bodies of ore be found—and certainly the indications are very good for such discoveries—then the dividend will necessarily be increased. With the present facilities which the Company have in their mill for reducing large quantities of ores at small cost, and the system of economy inaugurated in the various departments of the Company, I think it is reasonable to conclude that the stockholders hereafter will receive in dividends at least 45 per cent. of the gross product of the mine.

SECRETARY'S REPORT.

The President's report contains a summary of the Secretary's report. The following additional figures, however, are interesting:

Labor and salaries at mine	$463,461 67
Lumber and timber at mine	160,488 76
Materials, iron, hardware, candles, etc	89,601 04
Freight from California	8,809 97
Explorations conducted from other mines	21,739 72
General and incidental expenses of management	56,754 79
Total expense of mine	$770,107 13

Reducing ores:

Labor and employes	$120,568 71
Materials, quicksilver, wood, salt, sulph, copper, hauling, etc	383,083 98
Total of reduction expenses	$503,65 69
Taxes	20,109 83
Freight on bullion from Virginia	48,042 82

SUPERINTENDENT'S REPORT.

The Superintendent report the total amount of ground excavated during the year as follows:

Excavations on ore	1,026,141	cubic feet.
3,618 feet of tunnels, etc	137,683	" "
546 feet of shafts	70,405	" "
Total	1,234,229	" "

Or a cubical mass of 108 feet.

He estimates the ore within sight at 17,000 tons. He says: "To sum up the change in the mill, I may say that it has been altered and built over almost from the foundation, converting it from a dry-crushing mill, of 25 tons capacity, at a cost of $50 to $60 per ton, to a wet-crushing mill, of 100 tons capacity, at a cost of $12 per ton. During the month of November last, the first month we have had entirely free from construction expenses, and with the mill in complete running order, we were able to reduce 2,800 tons of ore, or nearly 100 tons per day, and this at a cost of under $12 per ton. This compares very well with the best work done at any mill in the country, either by steam or water, especially when we consider the care taken in the working of the ores, as shown by the results obtained, of about 70 per cent. of assay value."

The present cost of mining and reducing are stated thus:

Mining	$ 7 per ton.
Hauling	1 " "
Reduction	12 " "
Assaying, taxes, litigation, etc	5 " "
Total	$25 " "

NEW BOARD.

The reports were accepted, and the meeting proceeded to elect a new Board of Trustees. The number of shares of stock represented was 2,673. The new Board, elected almost unanimously, are: Asa T. Lawton, Alpheus Bull, Thomas Bell, H. B. Williams, Lewis Cunningham, R. B. Woodward and B. F. Sherwood. At a meeting of the new Board, Mr. Lawton was re-elected President, but declined, on account of an intention to pay a visit to the East. Thereupon Mr. Alpheus Bull was unanimously elected to fill the vacancy made by the declination of Mr. Lawton.

MINING INCORPORATION.—The Mojave Gold and Silver Mining Company filed its certificate of incorporation on Saturday last. Location: San Francisco District, Arizona. Capital stock, $1,200,000. Trustees: Wm. T. Coleman, J. B. Bayerque, O. Livermore, John Nigbtingalo and C. B. Williams.

SLIGHTLY MIXED.—Owing to the introduction of a new imposing stone in our office, last week, a general "shifting" of "forms" became necessary, and a serious transposition of matter occurred in the pages of our last issue. We therefore embrace the first opportunity to make proper acknowledgment, in justice to "Floy Favorite," before her excellent ladyship has an opportunity to indulge in a well-merited scold.

It is said that England during this year will have expended fifty millions of dollars on new iron ships, a sum greater than that which the United States has expended, in the same time.

(Conc'uded from page 402.)

ing the duties of said commission, to be taxed as costs in the cause.

49. All disputed lines, divisions and demarcations between parties claiming mineral veins, deposits, or auxiliary lands, shall be determined by the Judge of the Probate Court in a summary manner, according to the provisions of this chapter, and when he may judge it necessary, or is required by the parties litigant, he shall appoint a commission, as is provided in the 48th section of this chapter, to examine and report upon said division lines or boundaries, and the same proceedings shall be had thereon as is provided for in said section.

Probate Judge may Partition Interests of Parties—Also may Appoint Receivers for Parties Unwilling to Work Their Interests.

50. Whenever the members of a co-partnership or company, or tenants in common of mineral lands, cannot agree as to the working or management of the veins or mineral deposit therein, one or more of them may make complaint to the Judge of Probate of the county in which said lands are situated, setting forth the facts, who shall thereupon issue a summons to the other members of said co-partnership or company, or tenants in common interested therein, or cause such other notice to be given to them as he may think proper, requiring them to make answer thereto, and if, upon a hearing on such complaint, the Judge is of opinion that the claim or claims of such persons are susceptible of partition, and it can be equitably made between them, and the parties cannot agree among themselves on making such partition, he shall appoint a commission, as provided in section 48 of this chapter, who shall go upon the claims of such partnership, company, or tenants in common, if necessary, and segregate their claims, having in view the equities of the case and the customs and regulations of mines, and shall make report in writing to the Judge of Probate, who shall make his decree in accordance with said report, and which shall be conclusive between the parties, unless an appeal be taken, as provided in this chapter. Or whenever one or more of such partners or tenants in common in mineral lands, and owning not less than one-third of the full interest of such partnership or tenancy therein, shall desire to work their mine, and the other partners or tenants, after reasonable notice, shall neglect or refuse to unite in such working, they may make complaint to the Judge of Probate, as aforesaid, and he shall proceed thereon, as before provided in this section, and if, upon a hearing of such complaint, it appears to him that the complainants are able to work said mine, and that there is no good reason why the same should not be worked, he shall make a decree to that effect, and if the other partners do not appear he may appoint an agent and receiver, who shall protect their rights, and see that the mine is properly worked, and shall receive their proportion of the profits; but such partners or tenants in common so authorized to work as aforesaid, shall conduct said work at their own expense, and shall not be authorized to bind such other persons to the payment of any indebtedness which they may incur in that behalf.

Two Hundred Yards must be Located for the Territory, Next Adjoining the Discovery Claim, in all Claims Hereinafter Taken Up. Territorial Treasurer may Sell said Claim, by Auction, after Six Months.

51. It shall be the duty of persons who may discover and claim mining rights or mineral lands, at the same time that they may define the boundary of their claim or claims to any lode or mine, as required by the provisions of this chapter, to lay off and define the boundaries of one pertenencia, as required by the provisions of this chapter, adjoining their claim or claims, which shall be the property of the Territory of Arizona. And at the same time that they shall present their notice of claim or claims to be recorded by the Recorder of the mining district, they shall also present to such Recorder the claim of said Territory. And if said discovers and claimants shall neglect or refuse to present to such Recorder the claim of said Territory as aforesaid, they shall forever forfeit all claim to the mine or ledge so discovered by them. Any recording officer recording the claim or claims of such discoverers and claimants, when the claim of said Territory is not filed therewith as aforesaid, shall be subject to all the penalties provided in section 26 of this chapter. Such claim shall be recorded as provided in this chapter for like claims; but no work shall be done thereon, nor shall it be considered to be abandoned, so long as it is the property of the Territory. And if sold, the time within which the purchaser shall be required to work said claim shall commence from the day of sale, except when the time is suspended as before provided. Every Clerk of the Probate Court, as soon as he records the said claim, shall send a copy of his record to the Treasurer of the Territory, and no fees shall be charged by any recording officer in any matter relating to said claim. And the Territorial Treasurer may at any time after six months from the day he receives such record as aforesaid, and at such time and place as in his opinion will be most for the interest of the Territory, cause such claim to be sold at auction, to the highest bidder; but every such sale shall be at least twice advertised in the Territorial newspaper, and be held at his office, or the office of the Clerk of the Probate Court, or Recorder of the mining district of the county where the claim is situated. And the Treasurer is authorized to make a deed of the same to the purchaser in the name of the Territory. And the amount received by him shall be added by him to any fund now or hereafter provided for the protection of the people of the Territory of Arizona against hostile Indians, and be expended as provided by law. And after all expenses as are incurred by the Territorial authorities for the purpose of destroying or bringing into subjection all hostile Indian tribes in this Territory are liquidated, then all remaining or accruing funds, out of all or any sales of Territorial mining claims, shall be applied as a sinking fund for school purposes.

52. The extraction of gold from alluvial and diluvial deposits, generally termed placer mining, shall not be considered mining proper, and shall not entitle persons occupied in it to the provisions of this chapter, nor shall any previous section of this chapter be so construed as to refer to the extraction of gold from the above mentioned deposits.

53. This chapter shall be in force and take effect from and after the first day of January, A. D. 1865.

Hunter's Concentrator, Amalgamator and Separator.

[Copy of Reports.]

BEAR VALLEY, DEC. 12, 1864.

MR. A. HUNTER—*Dear Sir:*—I take pleasure in stating, in reply to your request, that your Concentrator has been running uninterruptedly at Princeton mill for more than three weeks, and that the enclosed notes by Mr. Williams, the superintendent, of a carefully measured test of its performance, during a period of a day and three-quarters, I believe fairly indicate what it has been doing during the whole of that time. The concentrator has been running side by side with the usual blanket arrangement, the sands in each case having been subject to amalgamation in battery, and subsequently passed over amalgamating plates. The only comparison that we have been able to make of the amount of sulphurets passing the blankets and the concentrator, respectively, results as follows:

First: One cubic foot of tailings from the concentrator, carefully panned out by hand, gave one-fourth of an ounce of very fine sulphurets and sands, which amount was found, upon assay, to contain two-fifths of clean sulphurets; indicating that the loss of sulphurets per cubic foot of tailings from the concentrator was about one-tenth of an ounce.

Second: One cubic foot of tailings from the blankets, panned out by hand as above, gave one and three-fourths ounces of sulphurets and fine sand, which was found to contain one and forty-nine hundredths ounces of clean sulphurets and twenty-six hundredths of an ounce of sand.

The loss of sulphurets from the blankets would thus appear to be in the proportion of 149 to 10, or nearly fifteen times greater than that from the concentrator. The concentrator has not been found at any time in the slightest manner out of order, and has required scarcely any attention. Congratulating you upon these facts, I am, sir, very respectfully yours,

FRED LAW OLMSTEAD,
Manager Mariposa Company.

Notes of a test run of Hunter's Separator, it having been supplied during the test with the sands reduced by one battery of the Princeton mill, in the condition in which they are usually received by the blankets:

Running time	1¾ days.
Amalgam saved on the plates of the Separator during above time, value	$6 75
Rate of saving of single machine per day	3 86
Rate of saving of six machines per day	23 16
Yield of Sulphurets, 1¾ days, pounds	215
Yield of Sulphurets, one days run of one Machine	123
Rate per day of saving from six machines, being the whole number required for the Princeton Mill	738
Yield of amalgam from plates of Separator, per ton of rock crushed, value	55
Yield of sulphurets from Separator per ton of rock crushed, pounds	18

HANNIBAL WILLIAMS,
Superintendent of Princeton Mill.

SAN FRANCISCO, DEC. 18, 1864.

I have recently examined one of Hunter's Concentrators and Amalgamators in operation at the Princeton Mill, Mariposa Estate. The sand and crushed rock, flowing from one battery of four stamps, were passed directly over the machine without using blankets.

An examination, by repeatedly panning out the tailings from the machine, and from the blankets, working alongside from other batteries, shows conclusively that the loss of sulphurets by the machine is very much less than by the blankets, and that it is a mere fractional part of the whole, consisting of the lightest and thinnest scales, such as can scarcely be saved by panning; while on the other hand, the tailings from the blankets contain a large amount of heavy sulphurets. The product of the machine is almost pure, clean sulphurets, while the blanket sands contain a large amount of quartz. The copper plates of the machine, being amalgamated, secure much or all of the free gold that escapes the battery, and thus separates it from the sulphurets and sands with which it is left mingled in the blanket product.

Mr. Williams, the superintendent of the mill found the saving of a single machine, in amalgam, to amount to $3.86 per day, or 55 cents per ton of crushed quartz. I witnessed the cleaning up the machine and the collection of a ball of amalgam. From the weights taken by Mr. Williams and the data given on his report on the machine to Mr. Olmsted, the manager of the estate, we may state the constitution of the Princeton ore, as it came from the batteries at that time, as follows:

Clean Sulphurets containing free gold and amalgam	18.00
Quartz sand, waste	1981.78
Loss of Sulphurets and tailings	.22
Total	2000.00

One machine will work seven tons in twenty-four hours. It is extremely simple and not liable to get out of order, and requires but little attention. WM. P. BLAKE,

Professor of Mineralogy, Geology and Mining, Mining and Agricultural College, Cal.

Esmeralda Mining Items.

THE Esmeralda *Union*, published at Aurora, says that a single track railroad, with turnouts, will soon be completed between that town and the Del Monte and Antelope mill.

R. A. RICKER, J. C. Parks, and others, have started for Columbia district, to ascertain whether there is any reality in the reports received from that region. Miners are leaving almost daily for that district. Accounts from there seem to warrant the belief that the leads are very rich.

THE editor of the *Union* has seen some very fine rock from the Young America claim, where a valuable strike has been made at a great depth. Confidence is expressed that that claim will soon be made a paying institution. We condense the following additional items from the *Union:*

One of the arastras at Bodie has stopped work. It is believed, from the amount of amalgam cleaned up, that the rock reduced has yielded about $40 to the ton. If these arastrus prove successful, as there is every reason to believe they will, no less than twenty-five will be in operation within the next six months. A good arastra is capable of reducing one ton of rock per day.

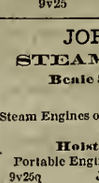
Nearly all the good tunnels in Silver Hill are being pushed forward with vigor. The Toledo, Governor Staaford, Young America, Lady Gertrude, Union and Oxford Beta, are in good hands, and getting well into the hill. Important strikes are expected before long.

Parties are now engaged in gathering float rock from the hills in this district, which they intend hauling to the mills for reduction. There are tons of thousands of tons of rich rock on the hills, most of which will yield from $15 to $100 per ton, and the time is not far distant when it will be worked with profit.

The smelting furnace at Montgomery is still in operation. Very good rock is being taken from the Del Monte. Work in the deep shaft is being prosecuted vigorously. Work is about to be resumed in the Wilburn, which is represented as being a valuable claim.

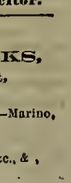
PREMIUM CUTLERY.—M. Price, at 110 Montgomery street, has a full assortment of Cutlery, etc. He received the first premium at the late Mechanics' Fair. Advertisement in another column.

NEW
PENSION, BOUNTY AND BACK PAY AGENCY.



The Proprietors of the MINING AND SCIENTIFIC PRESS have established an Agency for prosecuting claims against the United States Government for Pensions, Bounty, and Back Pay.

Discharged Soldiers, and heirs of deceased Soldiers, will find it for their interest to call upon us for any information relating to the above, as our facilities for preparing the proper evidence, and for collecting claims, are such as will invariably secure prompt returns.



Room No. 11 Government House, Corner Sansome and Washington Streets,

JOHN LOCHHEAD'S
STEAM ENGINE WORKS,
Beale Street, near Mission Street,
SAN FRANCISCO.

Steam Engines of every description built to order—Marine, Stationary or Locomotive.

Hoisting and Pumping Engines,
Portable Engines of all sizes; Donkey Pumps, &c., &c.
9v25q JOHN LOCHHEAD, Proprietor

STEAM BOILERS WITHOUT WELDS OR RIVETING.—Mr. W. S. Londridge, Alderwasley Ironworks, Derby, England, has pateuted a method of making cylinders from thick annular ingots, which are reduced by hammering, pressing, and rolling, so that the cylinder is without any joinings or seams. Krupp's tires are made free from welds; and he has exhibited the cylindrical shells of a locomotive boiler made solid. If Mr. Londridge can do what he proposes, at a moderate price, he will have greatly improved boiler-making.

A boilcr-plate bent cold into a cylinder is weakened; the outcr fibers arc strained by the stretching, aud the inner fibers are compressed and in antagonism, and help the steam to further stretch the outer ones; and if the iron is not very ductile the weakening is serious. Besides this, the single-riveted joint is forty-four per cent. weaker than the solid plate. Considering these two elements of weakness, it is probable that most boilers are not more than half as strong as they would be if their cylindrical parts were seamless.

Every engineer must admire the enterprise of Krupp, who makes the whole cylinder in one seamless piece; but the cost of his work is in proportion to his merit, and rather above those principles of trade which do not require carriers to pay for the people they kill. If we can get solid cylinders only twenty inches long, we can do well with them; and if longer, so much the better. We see no reason why the homogenous metal of Shortridge & Howell, or Bessemer, should not be cast in annular ingots, and worked as here proposed.

APPLICATION OF IRON SLAG.—In a paper on this subject, read before the British Association by Dr. Paul, he stated that attempts had been made to cast the slag into blocks as it issued from the furnace, to be afterward used as artificial stone, but had all failed. The application proposed with slag at the present time was to convert it into bricks for building. This was done by a simple and ingenious contrivance. A gentleman had succeeded in blowing the slag into a state of very fine division, by sending steam or air into it, just as it flowed from the blast furnace in the liquid state. It was thus blown into a substance resembling wool in appearance. This substance was taken and ground into dust, mixed with lime, subjected to powerful pressure, and made into bricks, of which he exhibited some examples. These bricks required no fire: after being pressed, they were allowed to dry, and could be used at once, the influence of the atmosphere producing a slow kind of hardeniug. —*Mining and Smelting Magazine.*

APPLICATION OF FIRE TO BREAKING GROUND.—Before the application of gunpowder to blasting, it is well known that, from the most ancient times, fire was largely employed on the Continent in aiding the breakiug of ground in mining. It has for some time been considered as a thing of the past; the last locality where it was employed being the ancient, and almost classical, Rammelsberg mine, in the Harz, where the peculiarly tough nature of the rock gave it unusual advantages. This mode of working (which indeed appears never to have been completely abandoned in Saxony) has, however, been recently resumed, with improvements in details, at the St. Christophe pyrites mine, near Breitenbruun, under the direction of Herr Fickentscher. It had already been attempted, a few years ago, by Herr Cloter, but was abandoned in consequuce of the great expense of the wood fuel then used. The fuel now adopted is Zwickau coke, which is thus used. Two iron bars, of different diameters, are placed across the level—the smaller one in advance, so that when the grate (made of bars 20″ long) is placed on them, it inclines towards the face of the ground to be broken. At a distance of 8″ or 10″ from this face, a wall of refractory brick is built on the grate up to the top of the level. The bottom part of this wall has openings for the purpose of lightiug the fire, and towards the top it is provided with air holes. With a closed fire-place, thus constructed, about one scheffel (1½ bushels) of coke, costing two sgr. (2½*d*), burns through the entire night, when the wall is removed, and the whole left to cool, after being sprinkled with water. About noon the face of the rock spontaneously detaches itself, and after that a further portiou is broken. The effect of the fire generally extends to the depth of 8″ (eight inches); and with one scheffel of coke, from 16 to 24 cwt. of ore is obtained, at one-half per cent less cost than it could be broken with powder.

STEAM ENGINES IN PRUSSIA.—From an official return recently issued, it appears that the total number of steam engines at the end of 1862 was 8,653, with 365,707 horse-power, as showing an increase of 5,821 engines and 273,243 horse-power, as compared to 1852, when there were only 2,832 engines, with a total of 92,462 horse-power.

STEEL tie-rods and truss-rods are proposed for cast-iron girders by the London *Building News.*

A Remarkable Steam Boiler.

Yesterday the boilers of the U. S. "double-ender," *Algonquin*, building by the Providence Steam Engine Company, were tested, and exhibited such results as to astonish the practical men who witnessed the trial. The boilers stand on the dock without any chimney whatever, so that the only draft was that which was produced inside of the boilers themselves, which usually would not serve to make steam in less than two or three hours of firing. In these boilers, however, steam was produced in seventeen minutes from the time the fire was lighted; and in half an hour the pressure was about seventy pounds to the inch. The safety valve was then opened and the steam blown off at a pressure varying from seventy to thirty pounds to the inch. At the pressure of thirty pounds the safety-valve was blocked open, but the steam could not be blown down below that point, although the safety-valve is about twice as large in proportion to the grate surface as is usual, and the fire was made of ordinary cord-wood burning without any chimney. Instead of blowing off water from the open valve, as boilers usually do, nothing but pure steam could be seen, thus showing that no heat is lost by working water; and the products of combustion as they pass from the boiler tubes are so cooled that persons were walking on the perforated plate through which the hot gases were escaping, without burning shoes or clothing, and the hand could be held at the aperture of the tube without any inconvenience whatever. Before the boilers were fired up they were subjected to a cold water pressure of more than a hundred pounds to the inch, which they endured without complaining.

The boilers are less than half the usual size, and yet they make pure steam without any "steam chimney," in less than a quarter of the time usually required, and in far greater quantities, from weight of fuel, than any other boiler ever constructed can do.

Persons interested ought to inspect these boilers before they are placed in the ship. They are the invention of Mr. Edward N. Dickerson, of New York, who has patented them here and abroad. The entire machinery of the *Algonquin* is building upon his plan, and the boilers are the first part tested.—*Providence Journal.*

We have no intimation, whatever of the peculiarity of construction employed in these boilers, other than what may be contained in the notice we give above from the *Journal.*

IMPORTANT DISCOVERY
—IN THE—
Photographic Art.
Jacob Shew's
CHROMATIC PROCESS OF PRINTING PHOTOGRAPHS.
[PATENT APPLIED FOR.]
THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a
SOFTNESS, CLEARNESS AND DELICACY OF TONE
unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.
In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.
"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.
☞ The public are invited to examine specimens at my Gallery. ☜ JACOB SHEW.

NOTICE TO MINERS.
NEW QUARTZ MILL.
THE ATTENTION OF ALL ENGAGED IN MINING IS called to Fauchery's unrivaled Mining Machines, consisting of his celebrated Turbine Water Wheel, which took the First Premium at the Mechanics' Fair at San Francisco for 1861; his Crocodile Quartz Crusher; his Pulverizer; and his Improved Freiberg Amalgamating Barrel; altogether forming the most complete and effective Quartz Reducing and Amalgamating Mill now in use. This mill can be put up at less cost, run with less power, and accomplish more work, than any other now in use.
B. Fauchery and F. Genard
Having established a Quartz Mill and Metallurgical Works, are now prepared to crush, roast, amalgamate, assort, concentrate, and give correct analysis of ores. We are also prepared to give our attention to the building and constructing of Quartz Mills and Furnaces, and give directions for working Mines; and also to instruct persons in all branches appertaining to Mining Works, at No. 23 Fremont street, near Market, Railroad Foundry building.
F. GENARD, Metallurgist. B. FAUCHERY, Engineer,
9v24

THE PACIFIC IRON WORKS,
First & Fremont Sts., between Mission & Howard, San Francisco.
The proprietors of the above works, invite the attention of all parties interested, to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Tramping and Hoisting machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated
Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.
GODDARD & COMPANY.

VULCAN IRON WORKS CO.,
[ESTABLISHED 1850.]
No. 137 and 139 First Street.
IRON FOUNDERS, STEAM BOILER MAKERS AND
STEAM ENGINE BUILDERS.
THE Machine Shop possesses the greatest number and the largest dimentions of Tools in the State. They have Laths to turn nine feet in diameter and thirty feet long. Their other facilities for executing work rapidly and efficiently are unsurpassed. Upwards of 300 STEAM ENGINES, made at their own Works, are now running in this State and Oregon, in Steamboats, Quartz Mills, Saw and Flouring Mills. Their BOILER WORKS have turned out upwards of 600 STEAM BOILERS of all kinds.
MACHINERY
Quartz Mills, Flour Mills, Hydraulic and other Presses, Reising Machines, Gearing Pullies, Gudgeons, Boxes, Rangers, etc., in Great Variety.
Quartz Stampers, Shoes & Dies,
Warranted to be made of the very hardest and toughest Iron.
RAILROAD MACHINERY, LOCOMOTIVE, CARS, CHILLED WHEELS AND TIRES, ETC.
A Published list of the Patterns of these Works will be sent on application.
MANUFACTURERS OF
JONVAL'S TURBINE WATER WHEELS,
The Cheapest, most Portable and Effective Machine ever invented for the application of Water as a Motive power. These Wheels are made entirely of Iron, simple, and not liable to get out of order.

First st., between Howard and Folsom streets,
SAN FRANCISCO.
EVERY DESCRIPTION OF IRON AND BRASS MACHINery, the Best and Most Economical, manufactured in the State of California, will be furnished with dispatch at the Miners' Foundry and Machine Works, as:
Steam Engines and Boilers, Flour, Saw and Quartz Mi
Machinery Mining Pumps, Amalgamators,
Retorts, Etc., Etc.
Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.
☞ Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.
All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.

Report of the Ophir Mining Company.

The Ophir Mining Company held its annual meeting on Wednesday last. We obtain the following figures from the Secretary's report. The ores extracted from the mine in 1864 were :

	Tons.
First class	421
Second class	3,345
Third class	14,842
Total	18,609

Of ore, 8,619 tons were sent to the Ophir Reduction Works, 3,545 tons to the Woodworth mill, and 964 tons to the New River mill. The quantity of ore now on hand is 8,147 tons. At the Ophir Reduction Works the ores were reduced by the barrel and patio processes. The following figures represent the workings of the two processes :

	Tons.	Value.	Yield.	Cost per ton.
Barrel	4,554	$606,653	$519,703	$32 05
Patio	2,920	258,289	243.947	32 37
Total	7,474	$864,742	$763,650	

The following is a recapitulation of the receipts for 1864 :

Balance on hand at last annual statement	$4,974 08
Receipts in Nevada, per statement A	107,617 58
Receipts at San Francisco Office, per statem't B.	899,773 15
Total receipts	$1,012,364 81

The dishursements were :

Mining cost, per statement C	$459,712 15
Washoe Reduction Works, per statement D	269 344 25
Woodworth Mill, per statement E	50,757 38
New mill on Carson river, per statement F	52,874 02
Bridge over Washoe lake, per statement G	6,338 60
Sundry payments in Nevada, per statement H	5,164 16
Sundry disbursements in San Francisco, per statement I (dividend No. 22)	67,200 00
Sundries	99,172 50
Balance on hand	10,817 75
Total	$1,012,364 81

The assets are thus put down :

Real and personal property in Washoe Valley	$346,426 26
On Carson river	127,012 00
At the mine, exclusive of the mine itself	50,929 50
4,000 tons fourth-class ore, lying at the mine, estimated value $2.50 per ton	10,000 00
Total, per inventory on file	$534,367 76
Claim against J. O'Farrell & Co. (reported Dec., 1863)	10,533 87
Claim against W. W. Palmer	8,000 00
Office fixtures	500 00
Cash on hand	10,817 75
Total assets	$564,219 38

The liabilities are :

Note for new mill on river	$7,500 00
Note for new machinery	8,215 27
Due for President's salary	2,400 00
Balance	546,104 11
Total	$564,219 38

HUNT'S MACHINES.—We have seen at Hunt's windmill factory, near the corner of Second and Jessie streets, a new mill for grinding horse-radish, occupying a space not exceeding twelve inches square. The inside has two grinding rolls, set with cutters, for grinding all kinds of vegetable roots. The rolls are geared together, and the mill is worked by a crank on one end of the machine. Under the rolls is a drawer to receive anything that is ground. When the mill is not in use, the crank and hopper is taken off and put into the drawer, and the whole shut up tight, to keep clean. This mill will grind one pound of any vegetable root in three to five minutes. It appears to be just the machine that is wanted for the hotel, hoarding house, restaurant, and in all large families. Mr. Hunt also exhibits a model of a new ditching machine, and a new self-regulating windmill, which last would be a valuable arrangement to place upon the top of the stores in the lower part of the city, where the cellars are liable to receive an influx of water from high tide, or an excess of seepage from the surrounding soil in wet weather. One of these mills would raise a large amount of water for the little distance required to run it off upon the surface, or into sewers, and could in many cases, keep cellars clean and sweet that are now troubled with stagnant water, damaging to both goods and health.

REMARKABLE SILVER MINES IN SOUTHERN UTAH.—We find the following account of marvelously rich silver mines in Southern Utah in the St. Joseph *Herald and Tribune* of November 1st : "Mr. John Harris, of this city, has recently returned from Meadow Valley, Utah Territory, where he has been for several months past. This valley is about 300 miles in a southerly direction from Great Salt Lake City, and about 100 miles from the head of navigation on the Colorado river. The silver mines located here are of incalculable value, the ore being so rich as to be malleable under the hammer. Assays made in San Francisco, Salt Lake City and New York prove it to be worth more than the famous Washoe lodes. Gen. Connor is keenly alive to the wealth of this section, and has located his great road from Salt Lake City to the Colorado river through it. Brigham Young will bring his people from Europe up this river hereafter, and not through this State. Many circumstances indicate the coming importance of these mines as better than any before known."

Machinery.

HUNT'S NEW DITCHER.

HAVING SECURED FROM THE INVENTOR THE SOLE right to manufacture these Machines for the States of California and Oregon, and the Territory of Washington, I am now prepared to receive and promptly fill orders for these machines.

With the aid of three men and four horses this Machine will cut a ditch from two to three feet deep, as may be desired, dumping the earth all on one side so as to form a dike or embankment. For particulars send for circular, to

E. O. HUNT,
Windmill Builder, No. 28 Second Street and 110 & 112 Jessie Street, San Francisco. 9v22tf

Volcanic Smelting Furnace.

PERSONS desiring information as to the Use and Economical properties of this Furnace, and intending to make use of the same, when satisfied of its superiority over all other means of reducing ores and separating metals from the sulphurets, can obtain all needed explanation and advice in regard to the same, and the terms of sale of rights to use the same, on application to Col. J. D. Stevenson, or Mrs. E. J. Hall, Proprietress, 633 Third street, San Francisco.

Drawings may be seen at the office of Col. J. D. Stevenson, No. 614 Merchant street.

The time required for reducing ores by this Furnace is from one to three hours, and the amount of fuel only one-tenth as much as is consumed by other processes.

The process of condensation is applied to this Furnace which will save all those portions of precious metals which usually escape in a volatile form.

The attention of all interested in the subject is requested to examine the important results obtained by this process.

Parties wishing will be allowed to erect a trial furnace of a capacity for smelting one ton or more, on signing an obligation to pay the usual fee for the right to use it, should they continue to make use of the invention for a longer period than two months.

v9-20tf MRS. E. J. HALL, M. D., Proprietress.

DUNBAR'S
PATENT SELF-ADJUSTING
Piston-Packing.

Requires no Springs or Screws; Is always Steam Tight, without excessive friction, and never gets slack or leaky.

IT WILL SAVE EACH SEASON MANY TIMES ITS COST in friction, time, steam and power. No engine, old or new, should be without it. It can be easily fitted to old or new Pistons.

Having obtained the Agency of this VALUABLE IMPROVEMENT, I am prepared to furnish it wherever desired. For further information, address HENRY S. SMITH,
23v8 Goldeu State Iron Works, San Francisco.

IMPROVED WATER-WHEEL,
—PATENTED BY—
JOHN TYLER, WEST LEBANON, N. H.

Giving the Maximum Power with the Minimum Cost; Having the Following as Some of Its Advantages Over Others—Giving the Best Percentage of Water Used, Durability,

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—It can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 500 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address

SMITH & HANSCOM,
15v8-3m Goldeu State Iron Works, San Francisco.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,

9-dfatf A. J. SMITH,

FARRAND'S
Oscillating Amalgamator,
RECEIVED THE
ONLY PREMIUM
AWARDED FOR AMALGAMATORS
At the Recent Industrial Fair
OF THE
Mechanics' Institute of San Francisco.

Committee of Awards.

O. BELDEN,	W. T. GARRATT,	H. P. WAKELEE,
O. GORI,	GEO. JOHNSON,	C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall, and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, whilst the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulppurets, as also for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,
R. L. OGDEN, Agent, SAN FRANCISCO.

S. E. corner Monigomery and California streets.
v9-19

Disney's Cylinder Amalgamator.
The Cheapest and Best.

DISNEY'S CYLINDER AMALGAMATOR, WHICH HAS recently been introduced to the public, has already been proved a complete success, and can be furnished, at a price cheaper than any other in use. It is simple in construction, and so arranged as to do a large amount of work with the smallest expenditure of power. The proprietor is satisfied that he can do more work in a given time and with a given expenditure of power than any other amalgamator in use. For small companies who desire cheap yet effective machines, none can be more desirable.

It may be seen in operation at the Rail Road Foundry on Fremont street where

A NEW CRUSHER

Is in operation and he can crush and Amalgamate at the LOWEST RATES. Miners and all others interested are invited to call and examine for themselves.

M. DISNEY, Patentee.
San Francisco, June 23, 1864. 1-3m

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percetage in the amount of work performed.

☞ These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kustel Bros. works, Bryant St. between 3d and 4th.

{Illustrated in the Mining and Scientific Press, April 9th, 864.} {HEPBURN & PETERSON.

nov8 3m*

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from where it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned aginst purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, having completed arrangements for its manufacture at the Fulton Foundry, in this city, now offer it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver and amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use.

This machine is now running on wasto sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.
San Francisco, April 1st, 1864. 14v8-tf

SALMON'S
PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any other yet presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to clean and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a Stone or Iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of wings placed like a screw propeller on the muller-shaft, force a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarity of propeller-screw and side wings, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The Inventors of this machine are practical Mechanics as well as experienced miners, and the machine offered by them to the public is the result of long experience and close observation. Manufactured at the San Francisco Foundry, San Francisco, Cal., by

J. & W. C. SALMON,

To whom all orders should be addressed. 15

TO QUARTZ MINERS.
Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of Iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber is also perfecting a HAND MACHINE for Miners engaged in prospecting, which will work 25 pounds of ROCK at a time, and which will weigh about 125 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,
At the Novelty Iron Works, Nos. 37 & 39 Fremont street.

A full attendance is desired, either in person or by proxy.

J. B. VAN HAGAN, Secretary.

December, 22, 1864. 26-2

PRACTICE WITH SUPER-HEATED STEAM.—At a meeting of the Institution of Engineers, in Scotland, Mr. James R. Napier gave an account, from notes furnished by Mr. Beardmore, the engineer of the General Steam Navigation Co., of the working of about thirty vessels that have been fitted with super-heating apparatus on the "combined" principle of Mr. Wethered of Baltimore. In some vessels there had been other alterations; but in others that had been altered only by super-heaters in the uptake there had been about 25 per cent. saving in fuel, with some increase of speed.

In one vessel that worked with salt water and had copper steam-pipes, there was a corrosion of copper, and a deposit of it on the slide-valves, and considerable damage done to the engines. This was attributed by Prof. Foster, of the Andersonian University, to the presence of hydrochloric acid in the dry and hot parts of the boiler—which, in that vessel, had a fifth of its surface above the water-level.

The Novelty Iron Works have in years past found corrosion in boilers used with surface condensers: They suspected that copper pipes had helped to cause it, and substituted cast iron pipes; and also kept the water in the boiler slightly salt. The corrosion ceased; from which cause is not certainly known; probably the presence of copper in contact with iron does harm in many instances.

On the whole, the superbeaters were satisfactory to the company.

CHILLED CAST IRON SHOT.—Recently, at Shoeburyness, an ordinary cast iron 250-lb shot was fired, with a 35-lb charge, against an iron target, and broke up almost harmlessly against it, making a severe dent but nothing more. A chilled shot of the same weight, and charge of powder, went clear through everything. The best Pontypool iron is used for the chilled shot. In some cases the shot is over chilled, and the outer surface so contracted over the inner mass as to shatter like glass, in the gun, and come out in fragments.

Steel shot of different makers were tried at the same time, and it was thought probable that they may in time supersede iron.

MINING BLANKS

KELLOGG'S PATENT
IMPROVED NEWBURY
PRINTING PRESS.

This New, Cheap, and most Desirable
JOB PRINTING PRESS
Can now be seen in operation in San Francisco, at the office of the MINING AND SCIENTIFIC PRESS, corner of Washington and Sansome streets.

Kellogg's Improvement

Is the addition of a very simple, but ingenious and effective method of self-delivering of the cards or printed sheets from the Newbury Press.

It costs less, weighs less, and prints faster than any of the ordinary Job Presses now in use. Any Journeyman or Apprentice, who understands working the Washington hand-press, will have no difficulty in operating this machine.

As a Cheap and Simple Press, for small Printing Offices in the interior, it highly recommends itself.

Address, **L. M. KELLOGG.**
October 29th, 1864. San Francisco.

ECLECTIC MAGAZINE,
Literature, Science and Art.
Beautiful Embellishments! Fine Steel Engravings! New Volume begins January, 1865.

Its contents are carefully selected each month from the entire range of Foreign Quarterlies, Monthlies and Periodicals.

It aims to give the choicest articles from the pens of the most eminent foreign writers on topics of general interest.

The great questions of the day, touching Literature, Morals, Science, Philosophy and Art, are thoroughly and ably discussed by the most brilliant and distinguished expositors.

The Reviews of the most notable publications which from time to time appear, and which are so extended and comprehensive as to give the reader the finest extracts and a general idea of the whole work, form a noteworthy feature of the publication.

Many of the articles in the foreign periodicals treat on subjects entirely local, and it is the aim of the Editor to carefully select only those of interest to the American reader.

The miscellany department, containing brief criticisms of both foreign and American publications, selections of poetry, scientific and art items, is made with great care from extensive research and varied reading, and adds much to the value of the work.

Each number is embellished with one or more fine steel engravings—portraits of eminent men or illustrative of important historical events.

The twelve monthly numbers make three volumes per year, with indexes and title-pages for binding.

TERMS—$5 per year. Single numbers, 42 cents.

Clergymen, Teachers and Clubs supplied on favorable terms. Address,

W. H. BIDWELL,
v9 25 No. 5 Beekman street, New York.

Illegal Advertising!

We notice many Secretaries are having their notices of delinquent sales published *weekly* in a *daily* paper. As this is a plain violation of the new law we feel it our duty to warn such parties of this error, and herewith append that section of the "Act Concerning Assessments upon the Stock of Corporations," which governs the publication of delinquent notices.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale. When published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

By the above extract it will be clearly seen that no delinquent stock can be legally sold by advertising in a daily paper, unless the notice is inserted *daily*.

For Advertising Assessments on Saturdays.

Levy your Assessments upon any day EXCEPT FRIDAY.

Advertise the ASSESSMENT NOTICE on the FIRST FOUR SATURDAYS succeeding the day upon which the assessment is levied.

Appoint the day for advertising the DELINQUENT SALE on the FIFTH SATURDAY succeeding the date of levying the assessment.

Appoint the DAY OF SALE on the SEVENTH SATURDAY succeeding the date of levying the assessment, or any day *previous* to the Eighth Saturday.

Assessments ordered upon Saturday afford the Secretary the longest term in which to effect his advertising at the mine.

Extracts from the Statutes.

The attention of companies who desire advertising their delinquent sales in any other paper than that in which the notice of assessment appears, is called to the following section of the law approved April 4th, 1864:

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified therein for the publication of the notice of sale, the Secretary shall, *unless otherwise ordered by the Board of Trustees*, cause to be published in the same papers in which the notice provided for in section five shall have been published, a notice substantially as follows, &c.

If, from a matter of convenience or necessity, the publication of an assessment is delayed, a very simple remedy is found in the following section of the law, relating thereto:

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the non-performance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew

MINING COMPANIES and others connected with the Mining Interests of California, will find all possible desired information in the *Mining and Scientific Press* of San Francisco which is an ably edited Journal, smartly handled, and well up to the times. The Mining Companies of California, are awake to the advantages of having their Mining Notices, comprising Assessments, Dividends, Elections, &c., concentrated in the advertising columns of one Journal, as we notice in the issue of the *Press* of May 7th, there are no less than seven pages of this interesting matter.—*U. S. Mining Journal, Railroad and Financial Advertiser, New York.*

Mining Notices--Continued.

Ashland Mining Company, Moss Lode, San Francisco District, Arizona.

NOTICE.—There are delinquent upon the following described stock, on account of Assessment levied on the 16th day of November, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

Any stock upon which said assessment shall remain unpaid on Saturday, the 14th day of January, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Wednesday, the 25th day of January, 1865, to pay the delinquent Assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

A. BUETELL, Secretary.

Office, 621 Market street, and corner of California street, San Francisco. dec17-25-4

Rogers' Silver Mining Company, Flowery District, Storey County, State of Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 1st day of December, 1864, an assessment of two dollars per share was levied upon the capital stock of said Company, payable immediately in United States gold and silver coin, to the Secretary, at his office, No. 103 California street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Thursday the 5th day of January, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold at public auction on Monday the 23d day of January, 1865, at 12 o'clock M. of that day, by John Middleton & Son, at No. 409 Montgomery street, San Francisco, to pay the delinquent assessment thereon, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

JNO. F. POPE, Secretary.

San Francisco, Dec. 3, 1864. 23-4

St. Clair Consolidated Mining Company, Smoky Valley District, Reese River, Nevada.

NOTICE.—There are delinquent, upon the following described Stock, on account of Assessment levied on the 15th day of November, 1864, the several amounts set opposite the names of the respective Shareholders as follows:—

Names.	No. Certificate.	No. Shares.	Amount.
L P Brooks	5 18	200	$200 00
Jaques Veiller	19 34	200	200 00
John Sburboro	36 37	50	50 00
C Beck	39 40	200	200 00
James Hunter	not issued	200	200 00
James Phelan	not issued	200	200 00

And in accordance with law, and an order of the Board of Trustees, made on the 16th day of December, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the salesroom of Edwards, McGrew & Olney, on the 31st day of December, 1864, at the hour of 11 o'clock, A. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

AUG. KUNAST, Secretary.

Office, No. 540 Washington street. dec17-25

Tallulah Mining Company, Sierra District, Humboldt County, Nevada.

Notice.—There are delinquent upon the following described Stock on account of Assessment levied on the 5th day of November, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

And in accordance with law, and an order of the Board of Trustees, made on the 5th day of November, 1864, so many Shares of each parcel of said stock as may be necessary, will be sold, at the office of the Company, No 418 Montgomery street, on Saturday, the 24th day of December, 1864, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of the sale.

GEORGE A. HILL, Secretary.

Office, No. 418 Montgomery street, San Francisco, California. 24

United States Mining Company, Virginia District, Storey County, Nevada.

Notice is hereby given that the Annual Meeting of the above named Company will be held on Monday, December 26th, at 2 o'clock P. M., at the office of the Secretary, Nos. 8 & 10 Government House, corner of Sansome and Washington streets, San Francisco, Cal.

22-5 J. M. BUFFINGTON, Secretary.

[The mining community begin to appreciate our reasonable rates of advertising, and are turning their patronage to the journal most properly entitled to receive it. The advantage to shareholders of having all mining notices concentrated in one mining journal, is obvious to all, and our terms have been established with a view to effect such a consolidation; and most companies having an object for publishing in any other particular paper, can consequently afford to have their notices appear in our journal also.—EDS. PRESS.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe o be a sensible motto.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alteration, which they may desire made in their advertisements, at their earliest convenience. New advertisements should be sent in as early as possible.

DEWEY & CO., Publishers.

Office, 11 Government House, corner Washington and Sansome street, San Francisco.

PRINTER'S WAREHOUSE.

TO MINE OWNERS.

REDUCTION AND SMELTING WORKS ON A SUFFICIENTLY large scale, where Ores of every kind can be thoroughly treated, so as to extract therefrom the precious metals, have long been wanted in California.

The Undersigned is desirous of creeting such works to meet the demand, provided sufficient encouragement can be obtained in regard to the quantity of work which may reasonably be looked for.

I have sufficiently proven, in my former smelting works, on Bryant Street, where I worked the richest of the Ophir ores to within Two and One-Half per cent. of the Assay, that I was acquainted with Metallurgy previous to my recent travels and experience in Europe, where I have built, during my sojourn there of nearly three years, many Reduction Works, thereby proving that I am capable of working ores by any and all known processes, whether by Smelting or Amalgamating, or other methods best adapted to the nature of the ore to be worked, and as close to the assay as can be done anywhere in Europe.

Mine owners wishing quantities worked as cheaply and effectively as can be done by sending it to Europe, will address the undersigned. Parties wishing to erect Quartz Mills, or other Reduction Works, can be furnished with Plans, Estimations, and other useful and necessary information as to the best mode of extracting the precious metals.

Address **J. MOSHEIMER,**

Office, Nos. 14 & 15 Mead's Building, Corner of Pine and Montgomery Streets, San Francisco. 9v23tfq

BRANDRETH'S PILLS.

This Medicine often Cures when all others have failed. They prevent Apoplexy; they Cure Diseases of the Heart and Nervous Diseases, and as a

Purgative and Bilious Pill,

They have not their equal in the World. Employed according to directions, accompanying every box of new style, they produce

Great Purity of the Blood and the System Generally,

Causing only the removal of vitiated matters which have become useless or injurious, and securing in the reconstruction of diseased parts of nothing but sound and healthy materials.

THE USE OF BRANDRETH'S PILLS

OCCASION

The Actual Decrease of the PRINCIPLE OF DEATH, and an Increase of the Vivifying, the Life Principle.

B. BRANDRETH,
294 Canal Street, New York.

W. F. BRANDRETH,
Office at Crane & Brigham's, San Francisco.

By sending $1 in coin to the above address, five boxes of pills will be sent to any part of this coast or the Interior, Free of charge. 16-3m4c8p

BOUND VOLUMES READY.—Bound copies of Volume VIII of the MINING AND SCIENTIFIC PRESS, due the following honorable gentlemen, are now ready, and will be forwarde on receipt of their orders for the same:

Honorable Seth Martin, Nevada.
" R. A. Clark, Onion Valley, Plumas.
" J. P. Rhodes, Sacramento.
" A. A. Smith, Nevada.
" E. H. Snyder, Placer.
" O. P. Stidger, Nevada.

Give us directions how to send them, gentlemen.

Important to Secretaries.

Secretaries will please write proper names and figures distinctly, and hand in their advertisements as early in the week as practicable. Our latest forms go to press Friday evening. Any information concerning the requirements of the laws regarding advertisements will be cheerfully given when solicited. Inspect all your notices carefully upon their first appearance. In case of postponement, give the earliest notice possible at the office. When copy is received sufficiently early, a proof-sheet will be furnished if desired. A revised copy rendered, for advertising at the mine, when requested. Neatly printed copies of advertisements, for serving individual notice to stockholders, printed at $1 per hundred. Copies of the new advertising law, as officially published, furnished gratuitously. ☞ Blank forms, for filing out Assessment Notices and Delinquent Sales, supplied free to advertisers in the MINING AND SCIENTIFIC PRESS, on application at the office

Mining and Scientific Press.

A Journal of Useful Arts, Science, and Mining and Mechanical Progress.

DEWEY & CO., PUBLISHERS, And Patent Solicitors. | SAN FRANCISCO, SATURDAY, DECEMBER 31, 1864. | VOLUME IX. Number 27.

Our Readers

Will bear in mind that the present issue of the Mining and Scientific Press is a gratuitous number annexed to Volume IX, in order that our new volume may commence with the first week in January. News dealers will also take notice of this fact.

Index to Volume IX.

An index to our present Volume will be found on the two last pages of this issue. It has cost us much labor, but will prove of great value to the many readers who preserve our paper.

Our Next Issue.

Our patrons may expect an excellent number of the Press next week.

The Findings of the Court in the Case of "Varney vs. Wheeler."

In the Circuit Court of the United States in and for the Northern District of California.

Thomas Varney, plaintiff, vs. William H Howland et als., defendants. } Findings of the Court.

In this cause the Court finds the following facts:

1st. That the patent on which this action was brought was duly issued by the Government of the United States, through its proper authorities, to the plaintiff, on the 16th day of December, 1862; that the said patent was applied for on the 15th day of September, 1862, and that preliminary steps to obtain said patent, were taken about the 21st day of June, 1862.

2d. The invention of a muller provided with slots, or recesses, and copper-plates, is not new, and is expressly disclaimed by the said plaintiff.

3d. That a patent for a machine, claimed to be an infringement of the above mentioned patent, issued to the plaintiff, was duly issued to the defendant, Zenas Wheeler, by the United States Government, through its proper authorities, on the 8th day of December, 1863, and that preliminary steps to obtain said patent were taken by said Wheeler in the month of May, of the year 1862.

4th. That the machine of said Wheeler claimed to be an infringement of the rights secured to the plaintiff by his said patent, is constructed according to said Wheeler's patent; that in the construction of said machine the following things, among others, are used—viz: a rotary muller, with a central opening; a deep pan (in which said muller revolves horizontally), the bottom of the pan serving as the stationary muller or bed-plate; and curved guide-plates, four (more or less) above the rotary muller, but not coming down to its upper surface. Further, as to its construction, the Court finds that on the periphery of the rotary muller are placed fixed spiral ribs, and reversedly spiral ribs on the inner side of the pan, fixed just above the bottom of the pan, the said ribs being placed at equal and suitable distances apart, and extending entirely around the periphery of the muller and the inner side of the pan. On the underside of the rotary muller are curved grooves or recesses, and on the bottom of the pan are reversedly curved grooves to those on the underside of the muller. The rotary muller is connected with an upright shaft by an universal joint, composed of a yoke resting on said shaft, and a ring, provided with a journal, at four equi-distant points around the periphery of said ring—two of said journals working in bearings on the lower end of the said yoke, and the other two of said journals working in boxes attached to the upper side of the rotary muller. The said curved guide plates are attached at their outer ends in slides on the inner side of the pan, and at their inner ends in a frame, which frame is supported on the upper end of the shaft above mentioned, and by means of a vertical screw passing through the top of the frame and resting on the upper end of the shaft. The said guide-plates may be raised and depressed, so as to follow any adjustment of the muller, and have the same relation to it whether in its highest or lowest working position.

5th. That the use, as in the said plaintiff's patented machine, of mullers provided with slots or recesses in a pan or tub, the upper muller provided with central openings and rotating upon the lower one, which is stationary, so as to create, when the machine is in operation, a circulation of the pulp, is not a new device; but that a device substantially the same has been used before the discovery as claimed by plaintiff; that it was used near the town of Goldville, in the county of Tallapoosa, State of Alabama, in the year 1845; that a machine substantially similar is described in a "Treatise on Metallurgy, &c., &c.," by Frederick Overman, at pages 266 and 267 of said treatise, before the date of plaintiff's alleged invention; and that said Treatise on Metallurgy is a public work, published in the city of New York, in the State of the same name, in the year 1852.

6th. That the covered or close pan specified in the patent of the plaintiff has not been used, or made, or sold by defendants, or either of them, since the date of plaintiff's patent, or at any time prior to the date of said patent, except as stated in a subsequent finding, numbered 14.

7th. That the curved plates used in the machine of said Wheeler are substantially different from the curved plates, or scrapers, patented by plaintiff, in their form, structure, arrangement, mode of operation, and the use for which they are intended and employed.

8th. That the curved or spiral plates of plaintiff's patented machine are scrapers of the upper surface of the rotary muller, and were intended so to be, while the curved plates of Wheeler's machine and patent are not scrapers of the upper surface of the rotary muller, and were not intended so to be; but were intended, and are used in the machine of said Wheeler, to prevent the pulp or ore from being thrown out of the pan by the centrifugal force generated by the rotation of the muller; to counteract the centrifugal force, and to cause the pulp or ore to pass toward the center of the muller and down through the central opening in said muller, to be again thrown outward between the rotary muller and the bottom of the pan or bed plate.

9th. That the curved or spiral plates in plaintiff's patented machine do not extend beyond the periphery of the upper muller, while the curved plates of Wheeler's machine and patent extend beyond the periphery of the upper muller to the side of the pan or tub; that the said curved plates in Wheeler's patent and machine are fastened in grooves, or slides, on the inner side of the pan, while in the said machine of plaintiff they extend from a ring, which encompasses a tube, in the center of the upper muller to periphery of the upper muller, as above stated—one end of each of said plates being attached to said ring, and they are supported near their outer ends by vertical rods extending down from the upper part or cover of the pan, and without any means of raising them from the upper surface of the rotary muller, or preventing them from coming down to said upper surface.

10th. That the curved plates of Wheeler's machine and patent are wider than the scrapers of Varney's patented machine. In the latter, they rest on the upper surface of the rotary muller, while in the former the said curved plates are fixed to a frame supported on the upper end of a shaft, and by means of a vertical screw passing through the top of said frame and resting on the upper end of the said shaft, the said plates may be raised or depressed, so as to follow any adjustment of the rotary muller, and bear the same relation to it, whether in its highest or lowest working position, but are not extended down so as to come in contact with the upper surface of the said muller in the use of the said machine of said Wheeler.

11th. That prior to the application of plaintiff for, or any preliminary steps taken by said plaintiff to obtain his said patent, the plaintiff entered into an arrangement with the defendants (Howland, Palmer, King and Angell,) for the manufacture, sale, and bringing into general use, the said machine, afterwards patented to the plaintiff.

12th. That a considerable number of said machines, for which the said patent was afterwards obtained by plaintiff, was under the said arrangement made and sold by the defendants (Howland, Palmer, King and Angell), on orders obtained by them, or by plaintiff, from persons desirous to obtain said machines; that the plaintiff received therefor under said arrangement from the said defendants considerable sums of money, being the proportion

agreed on of the purchase money of the pans sold; that such pans or machines were made and sold, and such use of the said plaintiff's invention permitted by him, the said plaintiff, prior to the application for his said patent.

13th. That plaintiff's claim of that part of his patent not new (see finding of facts No. 5,) was made through mistake, and without any willful default or attempt to mislead the public.

14th. That the said patented machine of plaintiff has not been made, or used, or sold by the defendants, or by either of them, since the 16th day of December, 1862; nor has any imitation of said machine been made, or used, or sold, since the 16th day of December, 1862, by the said defendants, or by either of them.

The Court further find the following conclusions of law:

1st. That the claim of plaintiff is for an improvement in amalgamators for gold and silver, and consists in the employment or use of a rotary muller, or an equivalent bed plate, arranged within a pan or tub, which is covered or closed, and so arranged that when the device is in operation the pulp will pass in a continuous stream outward from the center, and between the mullers to the circumference of the same, and thence outward over the upper and rotating muller to the center of the same, and down through the openings in the center of said rotary muller, between it and the stationary one below, to be again thrown to the periphery of the rotary muller, by which means all the particles of the pulp are brought in contact with the quicksilver in the pan or tub, or with amalgamated plates, to be attached to the muller or mullers. The pan above mentioned is covered or closed, and consists of two parts, of about equal dimensions, provided at their contiguous edges with flanges, through which they are belted together when the device is used as an amalgamator of ores of gold and silver. The said claim of plaintiff also includes, as his invention, curved or spiral plates to serve as scrapers, and so arranged as to scrape the upper surface of the rotary muller, to prevent all heavy substance in the pulp from lodging on said rotary muller, and to ensure the passage or movement of such heavy substances along with the current.

The letters patent issued to said plaintiff embrace: 1st. The use or employment of the rotating muller above mentioned, arranged within a pan or tub, with a stationary muller, or an equivalent bed-plate. 2d. The covered or close pan, above described in this finding, composed of two parts, of about equal dimensions, to be connected together when used as an ore amalgamating device. 3d. Curved plates or scrapers, arranged to operate in connection with the rotary muller, as above described in this finding. The plaintiff does not claim, unqualifiedly and broadly (but expressly disclaims), a muller provided with slots or recesses and upper plates, and the letters patent do not include it.

2d. The aforesaid patent of plaintiff, so far as it claims the use of a rotating muller provided with central openings, arranged within a pan or tub, with a stationary muller or bed plate underneath the rotary muller being old, is not valid.

3d. That the patent of said plaintiff, is not for a mere combination, but is for an improved machine incorporating several distinct improvements.

4th. That the patent of plaintiff is valid for such improvement on new inventions as he has clearly described in his specification, notwithstanding that he has also claimed to be the inventor of the other part not new; provided, that the parts whereof he is the inventor, are material and substantial parts of the thing invented, definitely distinguishable from the other part claimed without right; and provided that his claim to the parts not invented by him, was made through mistake, accident or inadvertence and without any willful default or intent to defraud or mislead the public; and provided further, that he has not unreasonably delayed to enter a disclaimer in the Patent Office of the part so claimed, not invented by him.

5th. That said plaintiff has not unreasonably delayed entering at the Patent Office a disclaimer of that portion of his invention not new and not invented by him, which is embraced in his patent.

6th. That the arrangement made between the plaintiff and the defendants, Howland, Palmer, Kiag and Angell, in relation to the making and vending his said patented machine, and the making and vending of such machines under such arrangement prior to the application of the said plaintiff for his said patent is a good defence to this action, and protects all the defendants under the seventh section of the Act of Congress entitled "An Act in addition to an Act to promote the progress of the useful arts," approved March 3d, 1839, if they had made and sold the said patented machine of the said plaintiff between the 16th day of December, 1862, and the day on which this action was commenced.

7th. That the description in a public work of a substantial and material part claimed as new of the theory patented, prior to the supposed discovery thereof by the patentee, is conclusive evidence that such part is old, and not legally patentable.

8th. That the defendants are not guilty of infringing the rights of the plaintiff under his said patent.

9th That neither of the defendants is guilty of infringing the rights of the plaintiff under his said patent.

The Court has not found on the issue of priority of invention and other issues further than is set forth in the above findings for the reason that in the view taken of the case and the facts found it appeared to be unnecessary.

Signed in open Court, Dec. 19th, 1864.

OGDEN HOFFMAN, Dis't Judge.

Let judgement be entered for the defendants.

OGDEN HOFFMAN, Dis't Judge.

Filed Dec. 19th, 1864.

TO MINE OWNERS.

REDUCTION AND SMELTING WORKS ON A SUFFICIENTLY large scale, where Ores of every kind can be thoroughly treated, so as to extract therefrom the precious metals, have long been wanted in California.

The Undersigned is desirous of erecting such works to meet the demand, provided sufficient encouragement can be obtained in regard to the quantity of work which may reasonably be looked for.

I have sufficiently proven, in my former smelting works, on Bryant Street, where I worked the richest of the Ophir ores to within Two and One-Half per cent. of the Assay, that I was acquainted with Metallurgy previous to my recent travels and experience in Europe, where I have built, during my sojourn there of nearly three years, many Reduction Works, thereby proving that I am capable of working ores by any and all known processes, whether by Smelting or Amalgamating, or other methods best adapted to the nature of the ore to be worked, and as close to the assay as can be done anywhere in Europe.

Mine owners wishing quantities worked as cheaply and effectively as can be done by sending it to Europe, will address the undersigned. Parties wishing to erect Quartz Mills, or other Reduction Works, can be furnished with Plans, Estimations, and other useful and necessary information as to the best mode of extracting the precious metals.

Address **J. MOSHEIMER,**

Office, Nos. 14 & 15 Mead's Building, Corner of Pine and Montgomery Streets, San Francisco. 9v23tfq

BRANDRETH'S PILLS.

This Medicine often Cures when all others have failed. They prevent Apoplexy; they Cure Diseases of the Heart and Nervous Diseases, and as a

Purgative and Bilious Pill,

They have not their equal in the World. Employed according to directions, accompanying every box of new style, they produce

Great Purity of the Blood and the System Generally,

Causing only the removal of vitiated matters which have become useless or injurious, and securing in the reconstruction of diseased parts of nothing but sound and healthy materials.

THE USE OF BRANDRETH'S PILLS

OCCASION

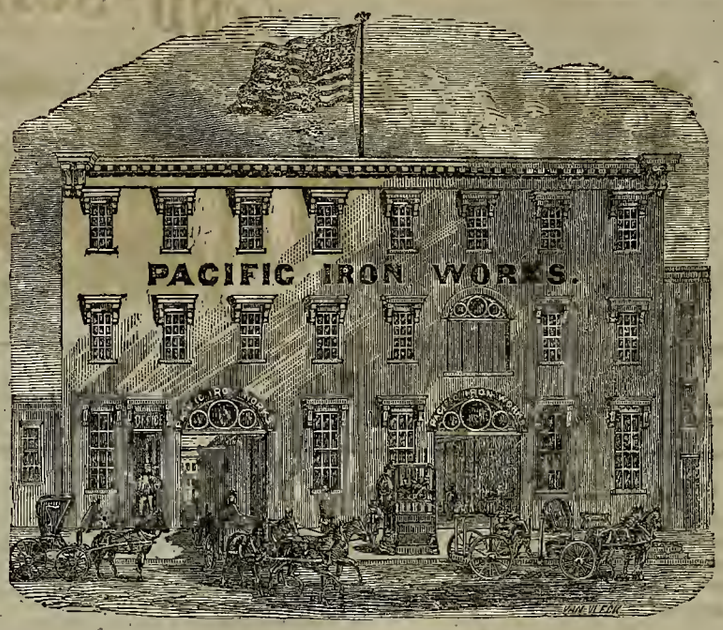
The Actual Decrease of the PRINCIPLE OF DEATH, and an Increase of the Vivifying, the Life Principle.

B. BRANDRETH,
294 Canal Street, New York.

W. F. BRANDRETH,

Office at Crane & Brighams, San Francisco.

By sending $1 in coin to the above address, five boxes of pills will be sent to any part of this coast or the interior, Free of charge. 16-3mdc8p



THE PACIFIC IRON WORKS,

First & Fremont Sts., between Mission & Howard, San Francisco.

The proprietors of the above works, invite the attention of all parties interested, to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated

Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.

IMPORTANT DISCOVERY
—IN THE—
Photographic Art.
Jacob Shew's
CHROMATIC PROCESS OF PRINTING
PHOTOGRAPHS.
[PATENT APPLIED FOR.]
THE UNDERSIGNED WOULD ANNOUNCE TO THE public that he has discovered a new and IMPROVED PROCESS for printing Photographs, which produces a
SOFTNESS, CLEARNESS AND DELICACY OF TONE
unattainable by any other known process and to which he has given the above name. It is applicable to any size of Photograph, and those having valuable old negatives which they desire printed by the improved process can do so at any time.
In order to secure the pecuniary advantages to be derived from this important discovery a patent has been applied for. When obtained, the privileges of the right will be disposed of at a reasonable rate to any Photographer desiring it. In the meantime all are warned against encroachments upon the rights of the discoverer as such will be prosecuted to the full extent of the law.
"Cartes de Visite" and large Photographs printed by this process will be furnished at the prices of the ordinary work of other establishments.
☞ The public are invited to examine specimens at my Gallery. ☜ **JACOB SHEW.**
6-tf 315 Montgomery street, near Pine.

QUICKSILVER
FOR SALE BY
S. F. BUTTERWORTH,
Northwest cor. Battery and California sts.
v9-19 SAN FRANCISCO.

RAILROAD HOUSE.
316, 318 & 320 Commercial Street,
SAN FRANCISCO.
THE Undersigned respectfully notifies his Patrons, and the Public generally, that he has assumed the entire charge of above popular House, and having had it thoroughly renovated, he flatters himself it will compare favorably, in point of comfort and cleanliness, with any House in the city. It is his intention to make it a First Class
Family Hotel.
Being conducted on the European plan, it is not only the CHEAPEST, RESPECTABLE HOTEL, but the most convenient as guests can choose their own hours of eating. The Restaurant is now conducted by G. V. DAWSON, Esq., formerly of Sacramento, late of Marysville, whose name is a sufficient guarantee of the best of living.
The Railroad House Coach conveys passengers to the hotel FREE. Barber Shop, Bath Rooms, Steam Baths, etc., connected with the House.
15-q **C. L. ROSS, Proprietor**

To the Public, and to Millmen in Particular.

As Thomas Varney has not, up to this date, withdrawn his notice in the "Mining and Scientific Press," in which appears the following language:—

"All persons are warned against purchasing machines made at the Miners' Foundry, called 'Wheeler's Amalgamators,' as they are an infringement on my patent, and a suit is now pending in the United States Circuit Court, against the parties infringing;"

In justice to myself I am compelled to give to the public a statement of the facts in the case, and show the position which Mr. Varney and myself occupy as Patentees. He commenced suit against me, and the Miners' Foundry, for $90,000, about the 1st of March 1863, and threatened suit against any and all persons who should buy my amalgamators, thus greatly damaging my business. To show the injustice of this suit against a "poor hard working mechanic," I will quote from the opinion of Judge Hoffman, as rendered in the case last November. He says:

This is an action for the infringement of a patent issued to the plaintiff on the 16th of December, 1862, for an "Improvement in Amalgamators for gold and silver." The machine alleged to be an infringement has also been patented—the patent being dated December 8th, 1863. The defendants deny the alleged infringements, and the novelty and originality of the plaintiff's invention. They have also given notice, under the statute, of various other defences, hereafter to be noticed.

Models of the two machines were exhibited in Court, and a large number of witnesses called to explain their construction and mode of operation. It is apparent that the patented machine of the defendant closely resembles, if it be not substantially identical with, the improved and modified machine now manufactured by the plaintiff. But the inquiry is not whether Wheeler's machine resembles that lately used by Varney, but whether the former is substantially the same as the machine described in Varney's patent. That Varney has, in many important particulars, modified the machine as described in his patent, is obvious. Indeed, his late machines resemble much more nearly in external appearance, and in their mode of operation, the Wheeler patented machine than they do a machine constructed according to the drawings and specifications of his patent.

After describing Mr. Varney's pan and its operation, the Judge says:

It appears, however, that the idea of working ores in a batch, by causing them to pass repeatedly between mullers, the upper one of which is provided with openings at the center, is by no means novel.

J. E. Clayton testifies that, so long ago as 1845, he arranged a machine in Tullahoosa, Alabama, for the reduction of gold ores, which embodied substantially the same principle.

* * * * * * *

In Overman's Metallurgy, p 267, a similar arrangement is described. * * * It is evident that the author is here describing an existing and well known machine, the usefulness of which has already been ascertained.

It is also apparent that the result aimed at is the same in this machine as in that of the plaintiff, and that the means adopted to accomplish it are substantially similar. In both machines the pulverization of the ore is effected by means of a bed plate upon which a muller rotates, with central openings to permit the pulp to pass continuously and repeatedly between the grinding surfaces until the operation is completed.

Amongst other things the Judge quotes the following from Judge Story:

But in all cases where the patentee claims anything as his own invention in his specification, Courts of law cannot reject the claim, and if included in the patent and found not to be new, the patent is void, however small and unimportant such asserted invention may be.

* * * * *

Here the plaintiff claims a particular position of machinery as his invention, and it clearly appears in evidence that the position is not new. It has existed before—not in machines exactly like the present, but in machines applied to analagous purposes, viz: in machines applied for the same purpose as the plaintiff applies them. The objection therefore, is fatal.

In the defendant's machine, the pan in two parts, provided with flanges, packing, &c., to which the plaintiff in his patent attaches so much importance, is not used, but a deep pan is substituted with a wooden cover.

The arrangement of the slots or shoes on the muller is different. The upper muller is provided with spiral ridges arranged to operate with similar ridges reversely inclined on the inner surface of the pan, to raise the pulp and promote the circulation. The upper muller is attached to the shaft by an universal joint, and by a mechanism quite unsimilar to that described by the plaintiff. And for the scrapers are substituted broad guide plates extending and secured to the edge of the pan, and capable of being elevated or depressed by means of a mechanism not found in the plaintiff's machines.

Assuming then—as in the point of view in which we are considering it we must—that each of the several parts of the plaintiff's machine is old, and not separately patentable, it seems clear to me that if the patent for the machine can be sustained, as for a new combination; which I think doubtful, the combination of the defendant is at least as novel as that of the plaintiff.

We have already seen that the muller rotating upon a bed plate, with central openings, and arranged in a pan so as to create a circulation of the pulp, is not a new invention. The tub, composed of two parts, with flanges, packing, &c., is not claimed to have been used by the defendant. In fact it is now discarded by the plaintiff, and a deep pan, with muller attached by an universal joint, has been adopted by him in his later machines. The infringement, if any, must consist in the use by the defendant of the scrapers described in the plaintiff's patent.

The inquiry thus arises—are the curved plates described in Wheeler's patent, substantially the same in their structure and operation as the scrapers of the Varney patent, and if so, do the latter constitute a "material and substantial part of the things patented by Varney, definably distinguishable from the other part." To determine this question, a brief description of Wheeler's machine is necessary.

The Judge then describes the Wheeler pan and the Varney pan and scrapers, and says:

In the Wheeler pan four plates are used while Varney employs only two scrapers. The form or curve given to these plates in both machines is similar, though not identical; but in their structure, arrangement, and the use for which they are intended, there is an essential difference. The scrapers of Varney are represented as of inconsiderable width, and extending from a ring at the center to the periphery of the muller—they rest apparently upon the surface of the muller, and no means of elevating or depressing them are mentioned in the specifications or exhibited in the drawings.

The plates of Wheeler are of considerable width, and attached to a frame suspended from the top of the shaft, resting upon a vertical screw, by means of which the frame and plates attached to it may be elevated or depressed. The plates extend to the inner surface of the pan, where they are secured by slides. The office of these plates, as described in Wheeler's patent, has already been mentioned. It appears to me that the scrapers of Varney neither serve, nor were intended to serve, any such purpose. [Here the Judge gives his reasons for the above opinion.]

For these reasons I am of opinion that the curved plates of Wheeler differ from the scrapers of Varney in their form and arrangement, their object and effect, and that therefore their use is not an infringement of Varney's patent.

Much testimony was taken to show that in fact Wheeler's invention was prior to that of Varney's and that the latter derived his ideas from the former.

It is claimed by Varney that his invention was, in its essential features, matured and perfected in August, 1861. But this statement seems hardly consistent with his declarations or his conduct.

Varney's application for his first patent was not made until the end of October, 1861. That machine has since been discarded as useless.

If then, at the time of this application, he had already matured and perfected the invention of another and far better machine, he committed a practical fraud upon the public in withholding from them the benefit of his skill and ingenuity. It is certainly strange that he should have gone to the trouble and expense of procuring a patent for his first machine, and delayed, for nearly a year, his application for a patent for the improved machine which he had, as he says, already invented.

It may well be doubted whether, if it be true as Varney states, that at the time of his application for his first patent he had already completed and perfected his improved machine, the suppression would not be fatal to both. It appears in evidence that, so early as December, 1861, Wheeler had conceived and communicated to Stewart & Kirkpatrick at Washoe, the idea of his machine. He explained to them the mode in which the circulation, or over and under current was to be produced, and the guide boards by which it was to be assisted.

In January, 1862, drawings of this machine were received at the Miner's foundry, and Stewart, the partner of Churchill, was desirous of having his pans constructed on that plan. The theory and construction of the proposed pan were fully explained to Varney, who succeeded, however, by affecting to consider Wheeler's pan a "humbug," in dissuading the parties from adopting it, and in inducing them to order pans made on the model of his own patent. These were subsequently discarded as useless. We are driven to adopt one of two suppositions: either that Varney wilfully deceived Stewart in inducing him to order an inferior pan, or else that he had not at that time discovered the mode of producing the over and under current, recognized its utility and invented a machine to effect it.

Wheeler commenced manufacturing his machines in January, 1862. He commenced using them in June of the same year. They were constructed at the Miners' Foundry by the defendants to this cause, under the immediate observation of Varney. But in his conversation with Scott, in July, 1862, and in his communications with the defendants, he does not appear to have intimated that he was the first inventor of the Wheeler machine, and that in constructing the latter they were violating his rights. Up to the end of 1862, he continued to have his own pans built at the same foundry; and it he really considered the construction of Wheeler's pans to be an infringement of his own invention, his silence is inexplicable. His delay in applying for his second patent is equally unaccountable. In August, 1861, he had, as he says, completed and perfected his invention of his improved machine, and yet in October of that year he applies for a patent for his first and imperfect invention, and delays his application for a patent for his improved and perfected machine until the end of June, 1862—more than a month after Wheeler had taken the preliminary steps to obtain his patent.

It is unnecessary, however, to pursue this inquiry further, for in the view I have taken of the case the question of priority of invention is immaterial.

The Judge then notices the other grounds of defence, and says:

If this view of the effect of that statute be correct, it affords a defence to Wheeler as well as the other defendants. It is not pretended that he has used any machines not manufactured by them, or that he has infringed the plaintiff's rights, otherwise than by receiving from the other defendants the sum agreed to be paid by them on the sale of his machines.

I find, therefore, for the defendants.

[In this candid statement to the public, I should have preferred to have given the decision of the Judge and the findings of the Court in full, but for the great length of space they would occupy; and I will state that the same can be found in the "Mining and Scientific Press," of December 10th and 31st, 1864, and invite their thorough perusal.]

It will be seen by the above statements that Mr. Varney is infringing on my patent right by the use of wide guide plates in his pans, instead of my infringing on his patent. The truth is, he never used any but narrow scrapers in his pans until after I had put my pans in operation, and they had proved a success. None of his pans made prior to the year 1863 ever run six weeks without being condemned and thrown aside. This may account for the fact that he afterwards altered his patterns and made them like mine, with an open, deep pan, and wide guide plates instead of scrapers, and put a wooden cover on the pans.

Having established my right in my patent Amalgamator, it is now my turn to protect myself against the infringement of "Mr. Varney, or any other man," and I intend to do it; and all persons are hereby warned not to purchase or use machines called "Varney's Amalgamators," as made at the Union Foundry, Pacific Foundry, or any other place, as they will make themselves liable for an infringement on my patent right.

Having made some important improvements in my Amalgamators, the public are invited to call and examine them at the Miners' Foundry, San Francisco, or at Prescott & Schiedel's Foundry, Marysville, where they are manufactured. ZENAS WHEELER.

San Francisco, Dec. 27th, 1864.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, Dec. 31, 1864.

We have no material change to note in the condition of the stock market. Leading shares are firmly held, and the late advance has been, for the most part, well maintained. One or two prominent claims were subjected to some short sales last week, and a decline was established, but this has been recovered within the past few days. These transactions are not likely to prove of much advantage to the seller, if the present strength of the market is any criterion of its complexion at the maturity of the contracts lately made. Lower-priced stocks have been rather actively dealt in, but, with trifling exceptions, at a decline.

The year will close upon a comparatively steady and safe market, and the business of most members of the Board henceforth is likely to be conducted more legitimately, and with less risk than formerly. The experience of the last six months has taught many the importance of a conservative and prudent policy, whether in operating for themselves or in the execution of orders for their friends.

The money market maintains substantially the same features. Capital is abundant and discounts are readily obtained in bank at 1¼@2 per cent. per month upon unexceptional collateral. In the open market, where the securities offered are less desirable, higher rates prevail.

The aggregate receipts of treasure from the interior and northern coast during the current month, will exceed *Five Million Dollars*. Our product of the precious metals for the past 12 months will probably be larger than that of any previous year in the history of the country.

Bullion is plentiful and gold bars have been taken to account by the bankers during the week at about 800@810. Silver bars range as formerly.

Legal Tender Notes have been sold to the extent of $103,000, opening at 47, rising to 48, dropping to 46¾, seller 30, and closing at 47. Latest Eastern advices quote gold in New York at 223 on the 30th instant.

Spring Valley Water Co. has advanced to 80 ₱ cent. on amount paid in (equivalent to $368 per share), and San Francisco City Water Co. also rose to 72 ₱ cent of par. A consolidation of these two companies has been agreed upon, to take effect on the 1st of January next. The new corporation is to represent 6,000 shares of stock, of $1,000 each, 3,200 of which accrue to the S. F. C. W. Co. and 2,800 to the S. V. W. Co. It is believed that upon a capital stock of $6,000,000 regular monthly dividends can henceforth be declared by the new company, and that this union of interests will give great satisfaction to all parties.

Sacramento Valley Railroad has been sold at 20, which is now bid. North Beach and Mission Railroad has advanced to 95 bid, 105 asked. California Steam Navigation Co. is inquired for at 75½, and San Francisco Gas Co. at 75.

Savage has met with small sales, within range of $1,600@1,625, ex. dividend of $75 per share, paid on Saturday last, and closes at $1,625 bid, buyer 30. After the declaration of the dividend—some two weeks in advance of the regular day of payment—a considerable balance was left in the treasury of the company. The mine continues to look well, and the yield of bullion for December will exceed that of the previous month.

Gould & Curry is in better favor, and 12 feet were sold, steadily advancing from $1,550 to $1,575, and closing at $1,590. Receipts of bullion the current month are nearly up to the average of the past two months, and a dividend of $75 per foot is confidently anticipated. Advices from the mine and mill are as favorable as formerly, and the usual activity prevails in every department.

Chollar has been more than usually active, and 37 feet were sold, within a range of $1,070, buyer 30 days, and $1,045 cash. No change has taken place in the character of the mine. The product of ore for this week is estimated at 1,500 tons. Receipts of bullion thus far during the month have amounted to some $80,000, and $50,000 is said to be in transitu to this city.

Potosi is dull and inactive, and small sales were made at $675@$700. The suit of this company with the Bajazet has been set for the 3d of January.

Yellow Jacket fell to $765, seller 30, rose to $800, buyer 30, and was held yesterday at $765. 8 feet were sold at these rates.

Belcher declined to $650, rose to $700, and was inquired for at the close at $750. The affairs of this company are assuming a more satisfactory shape, and a number of mills are now employed crushing ores.

Hale & Norcross rose to $350, declined to $300, at which rates 18 feet were sold, and closes at $260. An assessment of $50 per foot was levied on the 28th instant.

Ophir has been active and 57 shares were dealt in at from $400 to $375. We can learn of nothing of special interest from this mine.

Uncle Sam is in more favor and 100 shares have been sold, advancing from $150 to $175, receding to $165 and closing at $170 bid, $175 asked. It is said that some favorable developments have been made lately.

Overman sold yesterday at $120. The report of the expert, who recently examined into the affairs of this company, is now being printed. The liabilities of the company are placed at $82,000, including a debt of $30,000 due Stewart & Baldwin as attorneys. The assets amount to $69,000, $66,000 of which is due from the $50 assessment levied last month. The total expenditures of the company have amounted to $337,000.

Imperial has vibrated this week between $107@$113 per share, closing at about $109. No dividend will be declared for the current month. Bullion has been active, declining from $118, buyer 30, to $102, and rallying yesterday to $120, buyers' option. 605 shares were sold within this range.

Nevada, (J. G.) is lower, having fallen from $40 to $30. An assessment of $15 per share was levied on the 19th inst., making $57 per share thus far.

Burning Moscow has attracted less attention, and only 2,600 shares were dealt in, dropping from $35 to $25½, and selling yesterday at $30@32, closing at $28, seller 30.

Wide West declined from $22 to $13 and rose to $16. Golden Age and Empire has advanced from $14½ to $16½. Sheba was sold at $36@37 (assessment of $30 delinquent).

The total sales for the week, including those of last Saturday, amount to $380,865.

Canvassing Agent Wanted

For the Mining and Scientific Press.

An experienced, prompt and reliable agent can secure a desirable and lucrative engagement by applying immediately at this office.

Rubicon Gold and Silver Mining Company, No. 1, 2, 3, and 4.

The Members of the above Companies will please take notice that the Annual Meeting of the Stockholders, for the election of officers for the ensuing year, will be held at the office of the Companies, No. 964 Mission Street, San Francisco, on the evening of January 2d, 1865, at 7 o'clock. A full attendance is desired, either in person or by proxy.

J. B. VAN HAGAN, Secretary.

December, 22, 1864. 26-2

NATHANIEL GRAY,

General Furnishing Undertaker,

641 Sacramento St., corner of Webb, San Francisco.

Barstow's Metallic Burial Caskets and Cases.

Our Circulation.—The Mining and Scientific Press has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

Subscribe, Subscribe, Subscribe.

— FOR THE —

Mining and Scientific Press,

— THE MOST —

Profitable Newspaper

— FOR THE —

Readers of the Pacific Coast.

Tenth Volume—Jan. 7, 1865.

DEWEY & CO., Publishers.

Our Journal enters its TENTH VOLUME with marked prosperity and improved facilities and resources for furnishing a handsome, valuable and well filled sheet.

Its size is equal to that of Harper's Weekly, and its columns, upon comparison, will be found to contain a larger amount of reading.

We believe that the PRESS furnishes more information of ready application and intrinsic value to its readers than any other journal on this side of the Continent. Its circulation has doubled during the past year, and, for the economy and interests of the industrial classes of this and neighboring States, its subscription list should be more than trebled for the ensuing twelve months.

We shall continue to make the MINING AND SCIENTIFIC PRESS substantially

An Instructor to Prospectors,
An Economist to Millmen,
An Assistant to Active Miners,

An Economizer for Mining Advertisers,
A Reliable Reporter for Shareholders,
A Faithful Monitor for Stockdealers,

An Intelligencer for Mechanics,
An Incentive to Inventors,
A Reflector for Patentees,

And a Helpmeet to all Industrial Classes

Upon the Pacific Coast. We shall give accurate and frequent

DRAWINGS AND ILLUSTRATIONS

Of new inventions and discoveries of particular value to Miners, Mechanics and Manufacturers, their interests in this community being well considered "one and inseparable."

THE SHAREHOLDERS' DIRECTORY

Will comprise a record of all Notices of Meetings of Mining Companies, Notices of Assessments, amounts levied, date of advertising sales, and day of sales, announced in all advertisements appearing in the San Francisco papers during the period of the Volume.

STATISTICS FOR REFERENCE

And Reports of Elections of Officers of Mining Companies, Stock Reports, Valuable Tables, etc., will be continued with careful attention.

OUR PATENT AGENCY

Is increasing in importance and value to the inventors of the Pacific Coast, as many Patentees can testify from their successful applications through us during the past twelve months.

FOR SENDING ABROAD.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Hunter's Concentrator, Amalgamator and Separator.

[Copy of Reports.]

BEAR VALLEY, DEC. 12, 1864.

MR. A. HUNTER—*Dear Sir:*—I take pleasure in stating, in reply to your request, that your Concentrator has been running uninterruptedly at Princeton mill for more than three weeks, and that the enclosed notes by Mr. Williams, the superintendent, of a carefully measured test of its performance, during a period of a day and three-quarters, I believe fairly indicate what it has been doing during the whole of that time. The concentrator has been running side by side with the usual blanket arrangement, the sands in each case having been subject to amalgamation in battery, and subsequently passed over amalgamating plates. The only comparison that we have been able to make of the amount of sulphurets passing the blankets and the concentrator, respectively, results as follows:

First: One cubic foot of tailings from the concentrator, carefully panned out by hand, gave one-fourth of an ounce of very fine sulphurets and sands, which amount was found, upon assay, to contain two-fifths of clean sulphurets; indicating that the loss of sulphurets per cubic foot of tailings from the concentrator was about one-tenth of an ounce.

Second: One cubic foot of tailings from the blankets, panned out by hand as above, gave one and three-fourths ounces of sulphurets and fine sand, which was found to contain one and forty-nine hundredths ounces of clean sulphurets and twenty-six hundredths of an ounce of sand.

The loss of sulphurets from the blankets would thus appear to be in the proportion of 149 to 10, or nearly fifteen times greater than that from the concentrator. The concentrator has not been found at any time in the slightest manner out of order, and has required scarcely any attention. Congratulating you upon these facts, I am, sir, very respectfully yours,

FRED LAW OLMSTEAD,
Manager Mariposa Company.

Notes of a test run of Hunter's Separator, it having been supplied during the test with the sands reduced by one battery of the Princeton mill, in the condition in which they are usually received by the blankets:

Running time	1¾ days.
Amalgam saved on the plates of the Separator during above time, value	$6 75
Rate of saving of single machine per day	3 86
Rate of saving of six machines per day	23 16
Yield of Sulphurets, 1¾ days, pounds	245
Yield of Sulphurets, one days run of one Machine	123
Rate per day of saving from six machines, being the whole number required for the Princeton Mill	738
Yield of amalgam from plates of Separator, per ton of rock crushed, value	55
Yield of sulphurets from Separator per ton of rock crushed, pounds	18

HANNIBAL WILLIAMS,
Superintendent of Princeton Mill.

SAN FRANCISCO, DEC. 18, 1864.

I have recently examined one of Hunter's Concentrators and Amalgamators in operation at the Princeton Mill, Mariposa Estate. The sand and crushed rock, flowing from one battery of four stamps, were passed directly over the machine without using blankets.

An examination, by repeatedly panning out the tailings from the machine, and from the blankets, working alongside from other batteries, shows conclusively that the loss of sulphurets by the machine is very much less than by the blankets, and that it is a mere fractional part of the whole, consisting of the lightest and thinnest scales, such as can scarcely be saved by panning; while on the other hand, the tailings from the blankets contain a large amount of heavy sulphurets. The product of the machine is almost pure, clean sulphurets, while the blanket sands contain a large amount of quartz. The copper plates of the machine, being amalgamated, secure much or all of the free gold that escapes the battery, and thus separates it from the sulphurets and sands with which it is left mingled in the blanket product.

Mr. Williams, the superintendent of the mill found the saving of a single machine, in amalgam, to amount to $3.86 per day, or 55 cents per ton of crushed quartz. I witnessed the cleaning up the machine and the collection of a ball of amalgam. From the weights taken by Mr. Williams and the data given on his report on the machine to Mr. Olmsted, the manager of the estate, we may state the constitution of the Princeton ore, as it came from the batteries at that time, as follows:

Clean Sulphurets containing free gold and amalgam	18.00
Quartz sand, waste	1981.78
Loss of Sulphurets and tailings	.22
Total	2000.00

One machine will work seven tons in twenty-four hours. It is extremely simple and not liable to get out of order, and requires but little attention. WM. P. BLAKE,

Professor of Mineralogy, Geology and Mining, Mining and Agricultural College, Cal.

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

WHEELER'S
Amalgamating & Separating Pans.

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand.—The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no approachable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percetage in the amount of work performed.

☞ These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. The fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at Kastel Bros. works, Bryant St. between 2d and 3d.

[Illustrated in the Mining and Scientific Press, April 9th, 1864.]

nov8 3m* HEPBURN & PETERSON.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINery are invited to call at the Pacific Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its center and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the center, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and center of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamator can be seen running at the Pacific Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

SALMON'S
PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any other yet presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to clean and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a Stone or Iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of wings placed like a screw propeller on the muller-shaft, forces a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarly of propeller-screw and side wings, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The inventors of this machine are practical Mechanics as well as experienced miners, and the machine offered by them to the public is the result of long experience and close observation. Manufactured at the San Francisco Foundry, San Francisco, Cal. by

J. & W. C. SALMON,

Committee of Awards.

O. RELDAN,	W. T. GARRATT,	H. P. WAKELEE,
O. GORI,	GEO. JOHNSON,	C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall, and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, whilst the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulphurets, as also for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Heed, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of Iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber is also perfecting a HAND MACHINE for Miners engaged in prospecting, which will work 25 pounds of ROCK at a time, and which will weigh about 125 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,

*Our mining summary is not catalogued. Under this general head the reader will find continued, from week to week, throughout the volume, the leading facts, "strikes," etc, which have occurred in connection with all the principal mines on the Pacific Coast.

*Our Stock Remarks, Financial and money articles, and the Shareholder's Directory, will each be found continuous, and are not catalogued.

Send in Your Subscriptions!

A New Volume of the PRESS commences on the 7th of January, and now is the time to renew your subscriptions. If you believe in supporting our paper, send us in your own subscription, and as many of your neighbors' names as possible.

MINING REPORTS

Printed at this Office.

We have ample facilities for printing REPORTS OF MINING COMPANIES, in either circular or pamphlet form, and can offer

Superior Inducements

To Companies, Secretaries, and Superintendents, for this class of Job Printing.

DEWEY & CO., Printers,

Office Mining and Scientific Press.
